## G9 ASD Installation and Operation Manual

## G9 ASD Installation and Operation Manual

Date: October, 2009

## Introduction

Congratulations on the purchase of the new G9 True Torque Control ${ }^{2}$ Adjustable Speed Drive!
The G9 True Torque Control ${ }^{2}$ Adjustable Speed Drive (ASD) is a solid-state AC drive that features True Torque Control ${ }^{2}$. Toshiba's Vector Control Algorithm enables the motor to develop high starting torque and provide compensation for motor slip, which results in smooth, quick starts and highly efficient operation. The G9 ASD uses digitally-controlled pulse width modulation. The programmable functions may be accessed via the easy-to-use menu selections or via the Direct Access Numbers (see page 76). This feature, combined with Toshiba's high-performance software, delivers unparalleled motor-control and reliability.

The G9 ASD is a very powerful tool, yet surprisingly simple to operate. The user-friendly Electronic Operator Interface (EOI) of the ASD has an easy-to-read LCD Screen. There is also a read-only LED Screen with enhanced visibility that can be read from a greater distance. The EOI provides easy access to the many monitoring and programming features of the ASD.

The motor-control software is menu-driven, which allows for easy access to the motor-control parameters and quick changes when required.

To maximize the abilities of your new G9 ASD, a working familiarity with this manual will be required. This manual has been prepared for the ASD installer, user, and maintenance personnel. This manual may also be used as a reference guide or for training. With this in mind, use this manual to develop a system familiarity before attempting to install or operate the device.

## Important Notice

The instructions contained in this manual are not intended to cover all details or variations in equipment types, nor may it provide for every possible contingency concerning the installation, operation, or maintenance of this equipment. Should additional information be required contact your Toshiba Sales Representative.

The contents of this manual shall not become a part of or modify any prior or existing agreement, commitment, or relationship. The sales contract contains the entire obligation of Toshiba International Corporation. The warranty contained in the contract between the parties is the sole warranty of Toshiba International Corporation and any statements contained herein do not create new warranties or modify the existing warranty.

Any electrical or mechanical modifications to this equipment without prior written consent of Toshiba International Corporation may void all warranties and may void the UL/CUL listing or other safety certifications. Unauthorized modifications may also result in a safety hazard or equipment damage.

Misuse of this equipment could result in injury and equipment damage. In no event will Toshiba Corporation be responsible or liable for direct, indirect, special, or consequential damage or injury that may result from the misuse of this equipment.

## About This Manual

This manual was written by the Toshiba Technical Publications Group. This group is tasked with providing technical documentation for the G9 Adjustable Speed Drive. Every effort has been made to provide accurate and concise information to you, our customer.

At Toshiba we're continuously searching for better ways to meet the constantly changing needs of our customers. E-mail your comments, questions, or concerns about this publication to Technical-Publications-Dept@tic.toshiba.com.

## Manual's Purpose and Scope

This manual provides information on how to safely install, operate, maintain, and dispose of your G9 Adjustable Speed Drive. The information provided in this manual is applicable to the G9 Adjustable Speed Drive only.

This manual provides information on the various features and functions of this powerful cost-saving device, including

- Installation,
- System operation,
- Configuration and menu options, and
- Mechanical and electrical specifications.

Included is a section on general safety instructions that describe the warning labels and symbols that are used throughout the manual. Read the manual completely before installing, operating, performing maintenance, or disposing of this equipment.

This manual and the accompanying drawings should be considered a permanent part of the equipment and should be readily available for reference and review. Dimensions shown in the manual are in metric and/or the English equivalent.

Because of our commitment to continuous improvement, Toshiba International Corporation reserves the right, without prior notice, to update information, make product changes, or to discontinue any product or service identified in this publication.

Toshiba International Corporation (TIC) shall not be liable for direct, indirect, special, or consequential damages resulting from the use of the information contained within this manual.

This manual is copyrighted. No part of this manual may be photocopied or reproduced in any form without the prior written consent of Toshiba International Corporation.

## Contacting Toshiba's Customer Support Center

Toshiba's Customer Support Center can be contacted to obtain help in resolving any Adjustable Speed Drive system problem that you may experience or to provide application information.

The Support Center is open from 8 a.m. to 5 p.m. (CST), Monday through Friday. The Center's toll free number is US (800) 231-1412/Fax (713) 937-9349 - Canada (800) 527-1204. For after-hours support follow the directions in the outgoing message when calling.

You may also contact Toshiba by writing to:

Toshiba International Corporation
13131 West Little York Road

Houston, Texas 77041-9990
Attn: ASD Product Manager.

For further information on Toshiba's products and services, please visit our web site at www.toshiba.com/ind/.

## TOSHIBA INTERNATIONAL CORPORATION

## G9 Adjustable Speed Drive

Please complete the Warranty Card supplied with the G9 ASD and return it to Toshiba by prepaid mail. This will activate the 12 month warranty from the date of installation; but, shall not exceed 18 months from the shipping date.

Complete the following information and retain for your records.
Model Number: $\qquad$
Serial Number: $\qquad$
Project Number (if applicable): $\qquad$

Date of Installation: $\qquad$
Inspected By: $\qquad$
Name of Application: $\qquad$

## General Safety Information

DO NOT attempt to install, operate, maintain, or dispose of this equipment until you have read and understood all of the product safety information and directions contained in this manual.

## Safety Alert Symbol

The Safety Alert Symbol is comprised of an equilateral triangle enclosing an exclamation mark. This indicates that a potential personal injury hazard exists.

## Signal Words

Listed below are the signal words that are used throughout this manual followed by their descriptions and associated symbols. When the words DANGER, WARNING, and CAUTION are used in this manual they will be followed by important safety information that must be carefully adhered to.

The word DANGER preceded by the safety alert symbol indicates that an imminently hazardous situation exists that, if not avoided, will result in serious injury to personnel or loss of life.

## . DANGER

The word WARNING preceded by the safety alert symbol indicates that a potentially hazardous situation exists that, if not avoided, could result in serious injury to personnel or loss of life.

## . WARNING

The word CAUTION preceded by the safety alert symbol indicates that a potentially hazardous situation exists that, if not avoided, may result in minor or moderate injury.

## . CAUTION

The word CAUTION without the safety alert symbol indicates a potentially hazardous situation exists that, if not avoided, may result in equipment and property damage.

## CAUTION

## Special Symbols

To identify special hazards, other symbols may appear in conjunction with the DANGER, WARNING, and CAUTION signal words. These symbols indicate areas that require special and/or strict adherence to the procedures to prevent serious injury to personnel or loss of life.

## Electrical Hazard Symbol

A symbol that is comprised of an equilateral triangle enclosing a lightning bolt indicates a hazard of injury from electrical
 shock or burn.

## Explosion Hazard Symbol

A symbol that is comprised of an equilateral triangle enclosing an explosion indicates a hazard of injury from exploding parts.

## Equipment Warning Labels

DO NOT attempt to install, operate, perform maintenance, or dispose of this equipment until you have read and understood all of the user directions contained in this manual.

Warning labels that are attached to the equipment will include the exclamation mark within a triangle. DO NOT remove or cover any of these labels. If the labels are damaged or if additional labels are required, contact your Toshiba Sales Representative.

Labels attached to the equipment are there to provide useful information or to indicate an imminently hazardous situation that may result in serious injury, severe property and equipment damage, or loss of life if safe procedures or methods are not followed as outlined in this manual.

## Qualified Personnel

Installation, operation, and maintenance shall be performed by Qualified Personnel Only. A Qualified Person is one that has the skills and knowledge relating to the construction, installation, operation, and maintenance of the electrical equipment and has received safety training on the hazards involved (Refer to the latest edition of NFPA 70E for additional safety requirements).

## Qualified Personnel shall:

- Have carefully read the entire operation manual.
- Be familiar with the construction and function of the G9 ASD, the equipment being driven, and the hazards involved.
- Be able to recognize and properly address hazards associated with the application of motor-driven equipment.
- Be trained and authorized to safely energize, de-energize, ground, lockout/tagout circuits and equipment, and clear faults in accordance with established safety practices.
- Be trained in the proper care and use of protective equipment such as safety shoes, rubber gloves, hard hats, safety glasses, face shields, flash clothing, etc., in accordance with established safety practices.

For further information on workplace safety visit www.osha.gov.

## Equipment Inspection

- Upon receipt of the equipment inspect the packaging and equipment for shipping damage.
- Carefully unpack the equipment and check for damaged parts, missing parts, or concealed damage that may have occurred during shipping. If any discrepancies are discovered, it should be noted with the carrier prior to accepting the shipment, if possible. File a claim with the carrier if necessary and immediately notify your Toshiba Sales Representative.
- DO NOT install or energize equipment that has been damaged. Damaged equipment may fail during operation resulting in equipment damage or injury to personnel.
- Ensure that the rated capacity and the model number specified on the nameplate conform to the order specifications.
- Modification of this equipment is dangerous and is to be performed by factory trained representatives. When modifications are required contact your Toshiba Sales Representative.
- Inspections may be required before and after moving installed equipment.
- Contact your Toshiba Sales Representative to report discrepancies or for assistance if required.

## Handling and Storage

- Use proper lifting techniques when moving the ASD; including properly sizing up the load, getting assistance, and using a forklift if required.
- Store in a well-ventilated covered location and preferably in the original carton if the equipment will not be used upon receipt.
- Store in a cool, clean, and dry location. Avoid storage locations with extreme temperatures, rapid temperature changes, high humidity, moisture, dust, corrosive gases, or metal particles.
- The storage temperature range of the G9 ASD is $-13^{\circ}$ to $149^{\circ} \mathrm{F}\left(-25^{\circ}\right.$ to $\left.65^{\circ} \mathrm{C}\right)$.
- DO NOT store the unit in places that are exposed to outside weather conditions (i.e., wind, rain, snow, etc.).
- Store in an upright position.

## Disposal

Never dispose of electrical components via incineration. Contact your state environmental agency for details on disposal of electrical components and packaging in your area.

## Installation Precautions Location and Ambient Requirements

- The Toshiba ASD is intended for permanent installations only.
- Installation should conform to the $\mathbf{2 0 0 8}$ National Electrical Code - Article $\mathbf{1 1 0}$ (NEC) (Requirements For Electrical Installations), all regulations of the Occupational Safety and Health Administration, and any other applicable national, regional, or industry codes and standards.
- Select a mounting location that is easily accessible, has adequate personnel working space, and adequate illumination for adjustment, inspection, and maintenance of the equipment (refer to 2008 NEC Article 110-13).
- DO NOT mount the ASD in a location that would produce catastrophic results if it were to fall from its mounting location (equipment damage or injury).
- DO NOT mount the ASD in a location that would allow it to be exposed to flammable chemicals or gases, water, solvents, or other fluids.
- Avoid installation in areas where vibration, heat, humidity, dust, fibers, metal particles, explosive/ corrosive mists or gases, or sources of electrical noise are present.
- The installation location shall not be exposed to direct sunlight.
- Allow proper clearance spaces for installation. Do not obstruct the ventilation openings. Refer to the section titled Installation and Connections on pg. 14 for further information on ventilation requirements.
- The ambient operating temperature range of the G9 ASD is $14^{\circ}$ to $104^{\circ} \mathrm{F}\left(-10^{\circ}\right.$ to $\left.40^{\circ} \mathrm{C}\right)$.
- See the section titled Installation and Connections on pg. 14 for additional information on installing the drive.

## Mounting Requirements

- Only Qualified Personnel should install this equipment.
- Install the unit in a secure and upright position in a well-ventilated area.
- As a minimum, the installation of the equipment should conform to the $\mathbf{2 0 0 8}$ National Electrical Code - Article 110 (NEC), OSHA, as well as any other applicable national, regional, or industry codes and standards.
- Installation practices shall conform to the latest revision of NFPA 70E Electrical Safety Requirements for Employee Workplaces.
- It is the responsibility of the ASD Installer/Maintenance personnel to ensure that the unit is installed into an enclosure that will protect personnel against electric shock.

## Conductor Routing and Grounding WARNING

- Use separate metal conduits for routing the input power, output power, and control circuits.
- A separate ground cable shall be run inside of the conduit of the input power, output power, and the control circuits.
- A separate ground cable should be run inside the conduit with the input power, output power, and and control circuits.
- DO NOT connect $\mathbf{C C}$ to earth ground.
- Use IICC terminal as the return for the VI/II (V/I) input.
- Always ground the unit to prevent electrical shock and to help reduce electrical noise.
- It is the responsibility of the ASD Installer/Maintenance personnel to provide proper grounding and branch circuit protection in accordance with the 2008 NEC and any applicable local codes.

## - The Metal Of Conduit Is Not An Acceptable Ground -

## Grounding Capacitor Switch

The ASD is equipped with noise reduction capacitors which are used to reduce the EMI leakage via the 3-phase power-input circuit and for compliance with the Electromagnetic Compatibility Directive (EMC).
The effective value of the capacitor may be increased, reduced, or removed entirely via the Selector Switch, Switching Bar, or the Switching Screw - the type used is typeform-specific.

The Grounding Capacitor Switch allows the user to quickly change the value of the leakage-reduction capacitance of the 3-phase input circuit without the use of tools.
See the section titled System Grounding on pg. 18 for more on the Grounding Capacitor.
See figures $4,5,6$, and 7 on pg. 19 for an electrical depiction of the leakage-reduction functionality of the Grounding Capacitor and the methods used to set the capacitance value.

## Power Connections

Contact With Energized Wiring Will Cause Severe Injury Or Loss Of Life.

- Turn off, lockout, and tag out all power sources before proceeding to connect the power wiring to the equipment.
- After ensuring that all power sources are turned off and isolated in accordance with established lockout/tag out procedures, connect the 3-phase power source wiring of the correct voltage to the correct input terminals and connect the output terminals to a motor of the correct voltage and type for the application (refer to NEC Article 300 - Wiring Methods and Article 310 - Conductors For General Wiring). Size the branch circuit conductors in accordance with NEC Table 310.16.
- If multiple conductors are used in parallel for the input or output power and it is necessary to use separate conduits, each parallel set shall have its own conduit (i.e., place U1, V1, W1, and a ground wire in one conduit and U2, V2, W2 and a ground wire in another; refer to NEC Article 300.20 and Article 310.4). National and local electrical codes should be referenced if three or more power conductors are run in the same conduit (refer to 2008 NEC Article 310 adjustment factors).
- Ensure that the 3-phase input power is NOT connected to the output of the ASD. This will damage the ASD and may cause injury to personnel.
- DO NOT install the ASD if it is damaged or if it is missing any component(s).
- DO NOT connect resistors across terminals PA - PC or PO - PC. This may cause a fire.
- Ensure the correct phase sequence and the desired direction of motor rotation in the Bypass mode (if applicable).
- Turn the power on only after attaching and/or securing the front cover.

## Protection

- Ensure that primary protection exists for the input wiring to the equipment. This protection must be able to interrupt the available fault current from the power line. The equipment may or may not be equipped with an input disconnect (option).
- All cable entry openings must be sealed to reduce the risk of entry by vermin and to allow for maximum cooling efficiency.
- External dynamic braking resistors must be thermally protected.
- It is the responsibility of the ASD Installer/Maintenance personnel to setup the Emergency Off braking system of the ASD. The function of the Emergency Off braking function is to remove output power from the drive in the event of an emergency. A supplemental braking system may also be engaged in the event of an emergency. For further information on braking systems see parameters F250 and F304.

## Note: A supplemental emergency stopping system should be used with the ASD. Emergency stopping should not be a task of the ASD alone.

- Follow all warnings and precautions and do not exceed equipment ratings.

## System Integration Precautions

The following precautions are provided as general guidelines for the setup of the ASD within the system.

- The Toshiba ASD is a general-purpose product. It is a system component only and the system design should take this into consideration. Please contact your Toshiba Sales Representative for application-specific information or for training support.
- The Toshiba ASD is part of a larger system and the safe operation of the ASD will depend upon observing certain precautions and performing proper system integration.
- Improperly designed or improperly installed system interlocks may render the motor unable to start or stop on command.
- The failure of external or ancillary components may cause intermittent system operation (i.e., the system may start the motor without warning).
- A detailed system analysis and job safety analysis should be performed by the systems designer and/or systems integrator before the installation of the ASD component. Contact your Toshiba Sales Representative for options availability and for application-specific system integration information if required.

## Personnel Protection

- Installation, operation, and maintenance shall be performed by Qualified Personnel Only.
- A thorough understanding of the ASD will be required before the installation, operation, or maintenance of the ASD.

## WARNING

- Rotating machinery and live conductors can be hazardous and shall not come into contact with personnel. Personnel should be protected from all rotating machinery and electrical hazards at all times.
- Insulators, machine guards, and electrical safeguards may fail or be defeated by the purposeful or inadvertent actions of workers. Insulators, machine guards, and electrical safeguards are to be inspected (and tested where possible) at installation and periodically after installation for potential hazardous conditions.
- DO NOT allow personnel near rotating machinery. Warning signs to this effect shall be posted at or near the machinery.
- DO NOT allow personnel near electrical conductors. Contact with electrical conductors can be fatal. Warning signs to this effect shall be posted at or near the hazard.
- Personal protection equipment shall be provided and used to protect employees from any hazards inherent to system operation.

## System Setup Requirements

- When using the ASD as an integral part of a larger system, it is the responsibility of the ASD Installer/Maintenance personnel to ensure that there is a fail-safe in place (i.e., an arrangement designed to switch the system to a safe condition if there is a fault or failure).
- System safety features should be employed and designed into the integrated system in a manner such that system operation, even in the event of system failure, will not cause harm or result in system damage or injury to personnel (i.e., E-Off, Auto-Restart settings, System Interlocks, etc.).
- The programming setup and system configuration of the ASD may allow it to start the motor unexpectedly. A familiarity with the Auto-Restart settings are a requirement to use this product.
- Power factor improvement/correction capacitors or surge absorbers MUST NOT be installed on the output of the ASD.
- Use of the built-in system protective features is highly recommended (i.e., E-Off, Overload Protection, etc.).
- The operating controls and system status indicators should be clearly readable and positioned where the operator can see them without obstruction.
- Additional warnings and notifications shall be posted at the equipment installation location as deemed required by Qualified Personnel.

## . CAUTION

- There may be thermal or physical properties, or ancillary devices integrated into the overall system that may allow for the ASD to start the motor without warning. Signs to this effect must be posted at the equipment installation location.
- If a secondary magnetic contactor (MC) or an ASD output disconnect is used between the ASD and the load, it should be interlocked to halt the ASD before the secondary contact opens. If the output contactor is used for bypass operation, it must be interlocked such that commercial power is never applied to the ASD output terminals ( $\mathrm{U}, \mathrm{V}$, or W ).
- When using an ASD output disconnect, the ASD and the motor must be stopped before the disconnect is either opened or closed. Closing the output disconnect while the 3-phase output of the ASD is active may result in equipment damage or injury to personnel.

## Operational and Maintenance <br> Precautions

## . WARNING 食

- Turn off, lockout, and tag out the main power, the control power, and instrumentation connections before inspecting or servicing the drive, or opening the door of the enclosure.
- Turn off, lockout, and tag out the main power, the control power, and instrumentation connections before proceeding to disconnect or connect the power wiring to the equipment.
- The capacitors of the G9 ASD maintain a residual charge for a period of time after turning off the ASD. The required time for each ASD typeform is indicated with a cabinet label and a Charge LED (shown for smaller ASDs in Figure 2 on pg. 16; LED is located on the front panel of larger ASDs). Wait at least the minimum time indicated on the enclosure-mounted label and ensure that the Charge LED has gone out before opening the door of the ASD once the ASD power has been turned off.
- Turn the power on only after attaching (or closing) the front cover and DO NOT remove or open the front cover of the G9 ASD when the power is on.
- DO NOT attempt to disassemble, modify, or repair the ASD. Call your Toshiba Sales Representative for repair information.
- DO NOT place any objects inside of the ASD.
- If the ASD should emit smoke, or an unusual odor or sound, turn off the power immediately.
- The heat sink and other components may become extremely hot to the touch. Allow the unit to cool before coming in contact with these items.
- Remove power from the ASD during extended periods of non-use.
- The system should be inspected periodically for damaged or improperly functioning parts, cleanliness, and to ensure that the connectors are tightened securely.

## Motor Characteristics

Listed below are some variable speed AC motor-control concepts with which the user of the ASD should become familiar.

## Motor Autotuning

Motor production methods may cause minor differences in motor operation. The negative effects of these differences may be minimized by using the Autotune feature of the ASD. Autotuning is a function of the ASD that measures several parameters of the connected motor and places these readings in a stored table. The software uses the information in the table to help optimize the response of the ASD to applicationspecific load and operational requirements. The Autotuning function may be enabled for automatic tuning, configured manually at F400, or disabled.

The measured parameters include the rotor resistance, the stator resistance, the required excitation inductance, rotational inertia values, and leakage inductance values.

## Pulse Width Modulation Operation

The ASD uses sinusoidal Pulse Width Modulation (PWM) control. The output current waveform generated by the ASD approaches that of a perfect sine wave; however, the output waveform is slightly distorted. For this reason, the motor may produce more heat, noise, and vibration when operated by an ASD, rather than directly from commercial power.

## Low-Speed Operation

Operating a general-purpose motor at lower speeds may cause a decrease in the cooling ability of the motor. Reducing the torque requirement of the motor at lower speeds will decrease the generated heat at lower speeds.

When the motor is to be operated at low speed (less than $50 \%$ of full speed) and at the rated torque continuously, a Toshiba VF motor (designed for use in conjunction with an ASD) is recommended.

## Overload Protection Adjustment

The ASD software monitors the output current of the system and determines when an overload condition occurs. The overload current level is a percentage of the rating of the motor. This function protects the motor from overload.

The default setting for the overload detection circuit is set to the maximum rated current of the ASD at the factory. This setting will have to be adjusted to match the rating of the motor with which the ASD is to be used. To change the overload reference level, see Motor Overload Protection Level 1 on pg. 182.

## Operation Above 60 Hz

A motor produces more noise and vibration when it is operated at frequencies above 60 Hz . Also, when operating a motor above 60 Hz , the rated limit of the motor or its bearings may be exceeded; this may void the motor warranty.

Contact the motor manufacturer for additional information before operating the motor above 60 Hz .

## Power Factor Correction

DO NOT connect a power factor correction capacitor or surge absorber to the output of the ASD.
If the ASD is used with a motor that is equipped with a capacitor for power factor correction, remove the capacitor from the motor.

Connecting either of these devices to the output of the ASD may cause the ASD to malfunction and trip, or the output device may cause an over-current condition resulting in damage to the device or the ASD.

## Light Load Conditions

When a motor is operated under a continuous light load (i.e., at a load of less than $50 \%$ of its rated capacity) or it drives a load which produces a very small amount of inertia, it may become unstable and produce abnormal vibration or trips because of an over-current condition. In such a case, the carrier frequency may be lowered to compensate for this undesirable condition (see Program $\Rightarrow$ Special $\Rightarrow$ Carrier Frequency $\Rightarrow$ PWM Carrier Frequency).

Note: When operating in the Vector Control mode the carrier frequency should be set to 2.2 kHz or above.

## Motor/Load Combinations

When the ASD is used in combination with one of the following motors or loads, it may result in unstable operation.

- A motor with a rated capacity that exceeds the motor capacity recommended for the ASD.
- An explosion-proof motor.

When using the ASD with an explosion-proof motor or other special motor types, lower the carrier frequency to stabilize the operation. DO NOT set the carrier frequency below 2.2 kHz if operating the system in the vector control mode.

## Note: When operating in the Vector Control mode the carrier frequency should be set to 2.2 kHz or above.

If the motor that is coupled to a load that has a large backlash or a reciprocating load, use one of the following procedures to stabilize its operation.

- Adjust the S-pattern acceleration/deceleration setting,
- If operating in the Vector control mode, adjust the response time, or
- Switch to the Constant Torque control mode.

## Load-Produced Negative Torque

When the ASD is used with a load that produces negative torque (an overhauling load), the over-voltage or over-current protective functions of the ASD may cause nuisance tripping.
To minimize the undesirable effects of negative torque the dynamic braking system may be used. The dynamic braking system converts the regenerated energy into heat that is dissipated using a braking resistor. The braking resistor must be suitably matched to the load. Dynamic braking is also effective in reducing the DC bus voltage during a momentary over-voltage condition.

## $\triangle$ CAUTION

If under extreme conditions the dynamic braking system or a component of this system were to fail, the dynamic braking resistor may experience an extended over-current condition. The DBR circuit was designed to dissipate excessive amounts of heat and if the extended over-current condition were allowed to exceed the circuit parameters, this condition could result in a fire hazard.
To combat this condition, the 3-phase input may be connected using contactors that are configured to open in the event of an extended DBR over-current condition or an internal circuit failure. Using a thermal sensor and/or overload protection as the 3-phase input contactor drive signal, the contactors will open and remove the 3-phase input power in the event of an extended DBR over-current or system over-voltage condition. See Dynamic Braking on pg. 136 for more information using Dynamic Braking with the ASD.

## Motor Braking

The motor may continue to rotate and coast to a stop after being shut off due to the inertia of the load. If an immediate stop is required, a braking system should be used. The two most common types of motor braking systems used with the ASD are DC Injection Braking and Dynamic Braking.
For further information on braking systems, see DC Injection Braking on pg. 124 and Dynamic Braking on pg. 136.

## G9 ASD Characteristics <br> Over-Current Protection

Each ASD model is designed for a specified operating power range. The ASD will incur a trip if the design specifications are exceeded.

However, the G9 ASD may be operated at $115 \%$ of the specified output-current range continuously (or $110 \%$ continuously if $\geq 60 \mathrm{HP}$ for the 230 -volt system or if $\geq 125 \mathrm{HP}$ for the 460 -volt system) or at $150 \%$ for a limited amount of time as indicated in the section titled Current/Voltage Specifications on pg. 263. Also, the Stall Prevention Level may be adjusted to help with nuisance over-current trips (see F601).

When using the ASD for an application to control a motor that is rated significantly less than the maximum current rating of the ASD, the over-current limit (Thermal Overload Protection) setting will have to be changed to match the FLA of the motor. For further information on this parameter, see Motor Overload Protection Level 1 on pg. 182.

## ASD Capacity

The ASD must not be used with a motor that has a larger capacity than the ASD, even if the motor is operated under a small load. An ASD being used in this way will be susceptible to a high-output peak current which may result in nuisance tripping.

Do not apply a level of input voltage to an ASD that is beyond that which the ASD is rated. The input voltage may be stepped down when required with the use of a step-down transformer or some other type of voltage-reduction system.

## Using Vector Control

Using Vector Control enables the system to produce very high torque over the entire operating range even at extremely low speeds. Vector Control may be used with or without feedback. However, using feedback increases the speed accuracy for applications requiring precise speed control.

See F015 on pg. 81 for further information on using Vector Control.

## Installation and Connections

The G9 True Torque Control ${ }^{2}$ Adjustable Speed Drive may be set up initially by performing a few simple configuration settings. To operate properly, the ASD must be securely mounted and connected to a power source (3-phase AC input at the $\mathbf{R} / \mathbf{L} 1, \mathbf{S} / \mathbf{L} 2$, and $\mathbf{T} / \mathbf{L} \mathbf{3}$ terminals). The control terminals of the ASD may be used by connecting the terminals of the Terminal Board (P/N 072314P903) to the proper sensors or signal input sources (see the section titled I/O and Control on pg. 21 and Figure 9 on pg. 24).

System performance may be further enhanced by assigning a function to the output terminals of the Terminal Board and connecting the terminals to the proper indicators or actuators (relays, contactors, LEDs, etc.).

Note: $\quad$ The optional ASD interface boards may be used to expand the I/O functionality of the ASD.

## Installation Notes

## . CAUTION

When a brake-equipped motor is connected to the ASD, it is possible that the brake may not release at startup because of insufficient voltage. To avoid this, DO NOT connect the brake or the brake contactor to the output of the ASD.

If an output contactor is used for bypass operation, it must be interlocked such that commercial power is never applied to the output terminals of the ASD (U/T1, V/T2, and W/T3).
DO NOT apply commercial power to the ASD output terminals U/T1, V/T2, and W/T3.
If a secondary magnetic contactor (MC) is used between the output of the ASD and the motor, it should be interlocked such that the $\mathbf{S T}-\mathbf{C C}$ connection is disconnected before the output contactor is opened.
DO NOT open and then close a secondary magnetic contactor between the ASD and the motor unless the ASD is off and the motor is not rotating.

Note: Re-application of power via a secondary contact while the G9 ASD is on or while the motor is still turning may cause ASD damage.
The ASD input voltage should remain within $10 \%$ of the specified input voltage range. Input voltages approaching the upper or lower-limit settings may require that the over-voltage and under-voltage stall protection level parameters be adjusted. Voltages outside of the permissible tolerance should be avoided.
The frequency of the input power should be $\pm 2 \mathrm{~Hz}$ of the specified input frequency.
DO NOT use an ASD with a motor that has a power rating higher than the rated output of the ASD.
The G9 ASD is designed to operate NEMA B motors. Consult with your Toshiba Sales Representative before using the ASD for special applications such as with an explosion-proof motor or applications with a piston load.

Disconnect the ASD from the motor before megging or applying a bypass voltage to the motor.
Interface problems may occur when an ASD is used in conjunction with some types of process controllers. Signal isolation may be required to prevent controller and/or ASD malfunction (contact your Toshiba Sales Representative or the process controller manufacturer for additional information about compatibility and signal isolation).
Use caution when setting the output frequency. Over speeding a motor decreases its ability to deliver torque and may result in damage to the motor and/or the driven equipment.

Not all ASDs are equipped with internal primary power input fuses (typeform dependent). When connecting two or more drives that have no internal fuse to the same power line as shown in Figure 1, it will be necessary to select a circuit-breaking configuration that will ensure that if a short circuit occurs in ASD 1, only MCCB2 trips, not MCCB1. If it is not feasible to use this configuration, insert a fuse between MCCB2 and ASD 1.

Figure 1. Circuit Breaker Configuration.

## Mounting the ASD <br> CAUTION

— The following thermal specifications apply to the 230- and the 460-volt ASDs ONLY Install the unit securely in a well ventilated area that is out of direct sunlight.

The process of converting AC to DC, and then back to AC produces heat. During normal ASD operation, up to $5 \%$ of the input energy to the ASD may be dissipated as heat. If installing the ASD in a cabinet, ensure that there is adequate ventilation.
DO NOT operate the ASD with the enclosure door open.
The ambient operating temperature rating of the G9 ASD is $14^{\circ}$ to $104^{\circ} \mathrm{F}\left(-10^{\circ}\right.$ to $\left.40^{\circ} \mathrm{C}\right)$.
When installing adjacent ASDs horizontally Toshiba recommends at least 5 cm of space between adjacent units. However, horizontally mounted ASDs may be installed side-by-side with no space in between the adjacent units - side-by-side installations require that the top cover be removed from each ASD.

For 150 HP ASDs and above, a minimum of 50 cm of space is required above and below adjacent units and any obstruction.This space is the recommended minimum space requirement for the G9 ASD and ensures that adequate ventilation is provided for each unit. More space will provide a better environment for cooling (see the section titled Enclosure Dimensions and Conduit Plate Information on pg. 254 for additional information on mounting space requirements).
Note: Ensure that the ventilation openings are not obstructed.

## Connecting the ASD $\triangle$ DANGER 今

Refer to the section titled Installation Precautions on pg. 4 and the section titled Lead Length Specifications on pg. 20 before attempting to connect the ASD and the motor to electrical power.

## Power Connections

## DANGER 昘

Contact With 3-phase Input/Output Terminals May Cause An Electrical Shock Resulting In Injury Or Loss Of Life.

See Figure 20 on pg. 26 for a system I/O connectivity schematic.
An inductor (DCL) may be connected across the $\mathbf{P O}$ and $\mathbf{P A} /+$ terminals to provide additional filtering. When not used, a jumper must be connected across these terminals (see Figure 20 on pg. 26)
$\mathbf{P A} /+$ and $\mathbf{P B}$ are used for the DBR connection if using a braking resistor.
$\mathbf{P C} /-$ is the negative terminal of the DC bus.
$\mathbf{R} / \mathbf{L 1}, \mathbf{S} / \mathbf{L 2}$, and T/L3 are the 3-phase input supply terminals for the ASD.
$\mathbf{U} / \mathbf{T 1}, \mathbf{V} / \mathbf{T} 2$, and $\mathbf{W} / \mathbf{T} 3$ are the output terminals of the ASD that connect to the motor.
The location of the Charge LED for the smaller typeform ASD is provided in Figure 2. The Charge LED is located on the front door of the enclosure of the larger ASDs.

Figure 2. Typical G9 ASD Input/output Terminals and the Grounding Capacitor Switch.

Grounding Capacitor Switch - Pull for Small capacitance/push for Large capacitance.

## Power Connection Requirements

Connect the 3-phase input power to the input terminals of the ASD at $\mathbf{R} / \mathbf{L} 1, \mathbf{S} / \mathbf{L 2}$, and $\mathbf{T} / \mathbf{L} 3$ (see Figure 3 for the typical electrical connection scheme). Connect the output of the ASD to the motor from the ASD terminals $\mathbf{U} / \mathbf{T} 1, \mathbf{V} / \mathbf{T 2}$, and $\mathbf{W} / \mathbf{T 3}$. The input and output conductors and terminal lugs used shall be in accordance with the requirements listed in the section titled Current/Voltage Specifications on pg. 263.

If multiple conductors are used in parallel for the input or output power and it is necessary to use separate conduits, each parallel set shall have its own conduit and not share its conduit with other parallel sets (i.e., place U1, V1, and W1 in one conduit and U2, V2, and W2 in another; refer to NEC Article 300.20 and Article 310.4). National and local electrical codes should be referenced if three or more power conductors are run in the same conduit (refer to 2008 NEC Article 310 adjustment factors).

Note: $\quad$ National and local codes should be referenced when running more than three conductors in the same conduit.

Install a molded case circuit breaker (MCCB) or fuse between the 3-phase power source and the ASD in accordance with the fault current setting of the ASD and 2008 NEC Article 430.

The ASD is designed and tested to comply with UL Standard 508C. Modifications to the ASD system or failure to comply with the short circuit protection requirements outlined in this manual may disqualify the UL rating. See Table 22 on pg. 269 for typeform-specific short circuit protection recommendations.

As a minimum, the installation of the ASD shall conform to 2008 NEC Article 110, the Occupational Safety and Health Administration requirements, and to any other local and regional industry codes and standards.

Note: In the event that the motor rotates in the wrong direction when powered up, reverse any two of the three $A S D$ output power leads ( $U, V$, or $W$ ) connected to the motor.

Figure 3. G9 ASD/Motor Typical Connection Diagram.

## System Grounding

Proper grounding helps to prevent electrical shock and to reduce electrical noise. The ASD is designed to be grounded in accordance with Article 250 of the 2008 NEC or Section 10/Part One of the Canadian Electrical Code (CEC).

The grounding conductor shall be sized in accordance with Article 250-122 of the NEC or Part OneTable 6 of the CEC.

- The Metal Of Conduit Is Not An Acceptable Ground-

The input, output, and control lines of the system shall be run in separate metal conduits and each shall have its own ground conductor.

ASDs produce high-frequency noise - steps must be taken during installation to avoid the negative effects of noise. Listed below are some examples of measures that will help to combat noise problems.

- DO NOT install the input power and output power wires in the same duct or in parallel with each other, and do not bind them together.
- DO NOT install the input/output power wires and the wires of the control circuit in the same duct or in parallel with each other, and do not bind them together.
- Use shielded wires or twisted wires for the control circuits.
- Ensure that the grounding terminals $(\mathrm{G} / \mathrm{E})$ of the ASD are securely connected to ground.
- Connect a surge suppressor to every electromagnetic contactor and every relay installed near the ASD.
- Install noise filters as required.

## Grounding Capacitor

The Grounding Capacitor plays a role in minimizing the effects of leakage current through the ASD system and through ground paths to other systems. Leakage current may cause the improper operation of earth-leakage current breakers, leakage-current relays, ground relays, fire alarms, and other sensors - and it may cause superimposed noise on CRT screens.

The Grounding Capacitor Switch allows the user to quickly change the value of the leakage-reduction capacitance of the 3-phase input circuit. See figures 4, 5, 6, and 7 on pg. 19 for an electrical depiction of the leakage-reduction functionality and the methods used to change the capacitance value. The method used is typeform-specific.

If using a 460 -volt 5 HP ASD or a 460 -volt ASD that is in the range of 7.5 HP to 25 HP , and the $\mathbf{U} / \mathbf{T} 1$, $\mathbf{V} / \mathbf{T 2}$, and $\mathbf{W} / \mathbf{T} 3$ connections to the motor are 100 meters or more in length, the ASD Carrier Frequency must be set to 4 kHz or less when activating or deactivating the Grounding Capacitor Switch. ASD overheating may occur if the Carrier Frequency is set above 4 kHz when activating or deactivating the Grounding Capacitor Switch.

See pg. 5 for more information on the Grounding Capacitor Switch and pg. 16 for the location of the switch.

Figure 4. The Grounding Capacitor Switch is used on typeforms 230-volt 0.5 HP to 10 HP and the 25 and $30 \mathrm{HP} /$ 460 -volt 1.0 HP to 250 HP .
The value may be set to Maximum (default setting) or to Zero by pushing or pulling the switch actuator, respectively.

Figure 5. The Grounding Capacitor Switch is used on typeforms 230-volt 15 HP to 20 HP and the 40 HP to $60 \mathrm{HP} / 460$-volt 30 HP to 100 HP . The value may be set to Large (default setting) or Small by pushing or pulling the switch actuator, respectively.

Figure 6. The Grounding Capacitor Bar is used on typeforms 230-volt 75 HP and the $100 \mathrm{HP} / 460$-volt 125 HP and the 150 HP .
The value may be set to Large or Small (default setting) by connecting or disconnecting the switching bar, respectively.

Figure 7. The Grounding Capacitor Screw is used on typeforms 460-volt 175 HP and above.

The value may be set to Large or Small (default setting) by placing the screw in the A position or by placing the screw in the $\mathbf{B}$ position, respectively.

## Lead Length Specifications

Adhere to the NEC and any local codes during the installation of ASD/motor systems. Excessive lead lengths may adversely effect the performance of the motor. Special cables are not required. Lead lengths from the ASD to the motor in excess of those listed in Table 1 may require filters to be added to the output of the ASD. Table 1 lists the suggested maximum lead lengths for the listed motor voltages.

Table 1. Lead Length Recommendations.

| Model | PWM Carrier <br> Frequency | NEMA MG-1-1998 Section IV Part 31 <br> Compliant Motors ${ }^{2}$ |
| :---: | :---: | :---: |
| 230 Volt | All | 1000 feet |
| 460 Volt | $<5 \mathrm{kHz}$ | 600 feet |
|  | $\geq 5 \mathrm{kHz}$ | 300 feet |

Note: Contact the Toshiba Customer Support Center for application assistance when using lead lengths in excess of those listed.

Exceeding the peak voltage rating or the allowable thermal rise time of the motor insulation will reduce the life expectancy of the motor.

When operating in the Vector Control mode the carrier frequency should be set to 2.2 kHz or above.

## I/O and Control

The ASD can be controlled by several input types and combinations thereof, as well as operate within a wide range of output frequency and voltage levels. This section discusses the ASD control methods and supported I/O functions.
The Terminal Board supports discrete and analog I/O functions and is shown in Figure 9 on pg. 24. Table 2 lists the names, descriptions, and default settings (of programmable terminals) of the input and output terminals of the Terminal Board.
Note: $\quad$ To use the input lines of the Terminal Board to provide Run commands the Command Mode setting must be set to Terminal Block.
Figure 20 on pg. 26 shows the basic connection diagram for the G9 ASD system.
Table 2. Terminal Board Default Assignment Terminal Names And Functions.

| Terminal Name | Input/Output | Default Function (Also See Terminal Descriptions on pg. 22) | Circuit Config. |
| :---: | :---: | :---: | :---: |
| ST | Discrete Input <br> Connect to CC to activate (Sink mode). | Standby - Multifunctional programmable discrete input. Activation required for normal ASD operation. | Figure 10 on pg. 25. |
| RES |  | Reset - Multifunctional programmable discrete input. Resets the ASD. |  |
| F |  | Forward - Multifunctional programmable discrete input. |  |
| R |  | Reverse - Multifunctional programmable discrete input. |  |
| S1 |  | Preset Speed 1 - Multifunctional programmable discrete input. |  |
| S2 |  | Preset Speed 2 - Multifunctional programmable discrete input. |  |
| S3 |  | Preset Speed 3 - Multifunctional programmable discrete input. |  |
| S4 |  | Preset Speed 4 - Multifunctional programmable discrete input. |  |
| O1A/B (OUT1) | Switched Output | Low Speed - Multifunctional programmable discrete output. | Figure 16 on pg. 25. |
| O2A/B (OUT2) |  | Reach Frequency - Multifunctional programmable discrete output. |  |
| FLA |  | Fault relay (N.O.). | Figure 19 on pg. 25. |
| FLB |  | Fault relay (N.C.). |  |
| FLC |  | Fault relay (common). |  |
| RR | Analog Input | Multifunction programmable analog input. (0.0 to 10 VDC input). | Figure 11 on pg. 25. |
| RX |  | Multifunctional programmable analog input (-10 to +10 VDC input). | Figure 12 on pg. 25. |
| V/I |  | Unassigned - V - Multifunctional programmable isolated analog voltage input (0 to 10 VDC input) | Figure 13 on pg. 25. |
|  |  | Frequency Mode 2 (default SW301 setting) - I—Multifunctional programmable isolated analog current input (4 [0] to 20 mADC input - 0 Hz to Maximum Frequency). |  |
| AM | Analog Output | Output Current - Current output that is proportional to the output current of the ASD or to the magnitude of the function assigned to this terminal (see Table 6 on pg. 237 for assignment listing). | Figure 18 on pg. 25 |
| FM |  | Output Frequency - Current or Voltage output that is proportional to the output frequency of the ASD or to the magnitude of the function assigned to this terminal (see Table 6 on pg. 237). Select Current or Voltage at F681. |  |
| SU+ | DC Input | Externally-supplied 24 VDC backup control power (1.1 A min.). |  |
| P24 | DC Output | 24 VDC output (200 mA max.). | Figure 14 on pg. 25. |
| PP |  | 10.0 VDC/10 mA voltage source for the external potentiometer. | Figure 15 on pg. 25. |
| FP | Pulsed Output | Frequency Pulse - Multifunctional programmable output pulse train of a frequency based on the output frequency of the ASD (see Table 6 on pg. 237). | Figure 17 on pg. 25. |
| IICC | - | Return for the V/I input terminal (see IICC Note: on pg. 105). | DO NOT <br> connect to <br> Earth Gnd or to each <br> other. |
| CCA | - | Return for the RR, RX, P24, and the PP terminals. |  |
| CC | - | Return for the AM, FM, SU+, and the discrete input terminal. |  |

## Terminal Descriptions

Note: The programmable terminal assignments may be accessed and changed from their
default settings as mapped on pg. 46 or via the Direct Access method: Program $\Rightarrow$
Direct Access $\Rightarrow$ Applicable Parameter Number. See the section titled Program
Mode Menu Navigation on pg. 46 for the applicable Direct Access parameter
numbers.

For further information on terminal assignments and default setting changes, see the sections titled Terminal on pg. 47 and Default Setting Changes on pg. 74.

Note: See the section titled Cable/Terminal/Torque Specifications on pg. 265 for the G9 ASD conductor and terminal electrical specifications.
$\begin{array}{ll}\text { Note: } & \text { Programmable terminals will not retain their settings indefinitely in the event of a } \\ \text { power loss. Connect an external }+24 \text { VDC supply to the } \boldsymbol{S U}+\text { terminal to retain the } \\ \text { programmable settings in the event of Control Power loss (see Figure } 20 \text { on pg. 26). }\end{array}$
ST - The default setting for this terminal is the Standby mode controller. As the default setting, this terminal must be activated for normal system operation. The $\mathbf{S T}$ terminal is activated by connecting $\mathbf{C C}$ to this terminal (Sink mode). When deactivated, OFF is flashed on the LED Screen and the Not-Ready-to-Run indicator is displayed on the LCD Screen (see Figure 22. on pg. 31). This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F113).

RES - The default setting for this terminal is Reset. The RES terminal is activated by connecting CC to this terminal (Sink mode). A momentary connection to CC resets the ASD and any fault indications from the display. Reset is effective when faulted only. This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F114).
$\mathbf{F}$ - The default setting for this terminal is Forward run command. The $\mathbf{F}$ terminal is activated by connecting CC to this terminal (Sink mode). This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F111).
$\mathbf{R}$ - The default setting for this terminal is Reverse run command. The $\mathbf{R}$ terminal is activated by connecting CC to this terminal (Sink mode). This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F112).

S1 - The default setting for this terminal is Preset Speed 1 (see Preset Speed 1 on pg. 83). The S1 terminal is activated by connecting CC to this terminal (Sink mode). This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F115).
$\mathbf{S 2}$ - The default setting for this terminal is Preset Speed 2 (see Preset Speed 2 on pg. 83). The S2 terminal is activated by connecting CC to this terminal (Sink mode). This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F116).

S3 - The default setting for this terminal is Preset Speed 3 (see Preset Speed 3 on pg. 84). The S3 terminal is activated by connecting CC to this terminal (Sink mode). This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F117).

S4 - The default setting for this terminal is Preset Speed 4 (see Preset Speed 4 on pg. 84). The S4 terminal is activated by connecting CC to this terminal (Sink mode). This input terminal may be programmed to any of the functions listed in Table 5 on pg. 234 (see F118).

RR - The default function assigned to this terminal is the Frequency Mode $\mathbf{1}$ setting. The RR terminal accepts a $0-10 \mathrm{VDC}$ input signal that is used to control the function assigned to this terminal. This input terminal may be programmed to control the speed or torque of the motor via an amplitude setting or regulate by setting a limit. The gain and bias of this terminal may be adjusted for applicationspecific suitability (see F210 - F215).
$\mathbf{R X}$ - The default function assigned to this terminal is the Torque Command setting. The $\mathbf{R X}$ terminal accepts a $\pm 10$ VDC input signal that is used to carry out the function assigned to this terminal. This input terminal may be programmed to raise or lower the speed or torque of the motor via an amplitude setting. This terminal may also be used to regulate the speed or torque of a motor by setting a limit. The gain and bias of this terminal may be adjusted for application-specific suitability (see F216F221). See Figure 20 on pg. 26 for an electrical depiction of the $\mathbf{R X}$ terminal. This terminal references CCA.

V/I - The V/I terminal has the dual function of being able to receive an input voltage or current. The function as a voltage input to receive a $0-10 \mathrm{VDC}$ input signal. The function as a current input is to receive a $0-20 \mathrm{~mA}$ input signal. Using either input type, the function is to control the 0.0 - Maximum Frequency output or the 0.0 to $250 \%$ torque output of the ASD. This is an isolated input terminal. This terminal may be programmed to control the speed or torque of the motor and cannot process both input types simultaneously. SW301 must be set to V or I to receive a voltage or current, respectively (see Figure 9 on pg. 24). Terminal scaling is accomplished via F201 - F206. The gain and bias of this terminal may be adjusted for application-specific suitability (see F470 and F471).

SU+ - Externally supplied $+24 \mathrm{VDC} \pm 10 \%$ at 1.1 A (minimum) backup control power. This terminal references CC.
$\mathbf{P 2 4}-+24$ VDC at 200 mA power supply for customer use. This terminal references CCA.
$\mathbf{P P}$ - The function of output $\mathbf{P P}$ is to provide a $10 \mathrm{VDC} / 10 \mathrm{mADC}$ output that may be divided using a potentiometer. The tapped voltage is applied to the $\mathbf{R R}$ input to provide manual control of the $\mathbf{R R}$ programmed function. This terminal references CCA.

01A/B (OUT1A/B) - The default function assigned to this terminal is Output Low Speed. This output may be programmed to provide an indication (open or closed) that any one of the functions listed in Table 8 on pg. 239 has occurred or is active. This function may be used to signal external equipment or to activate the brake (see F130). The OUT1 terminal is rated at $2 \mathrm{~A} / 120$ VAC and 2 A/30 VDC.

O2A/B (OUT2A/B) - The default function assigned to this terminal is ACC/DEC Complete. This output may be programmed to provide an indication (open or closed) that any one of the functions listed in Table 8 on pg. 239 has occurred or is active. This function may be used to signal external equipment or to activate the brake (see F131). The OUT2 terminal is rated at $2 \mathrm{~A} / 120 \mathrm{VAC}$ and 2 A/30 VDC.

FP - The default function of this output terminal is to output a series of pulses at a rate that is a function of the output frequency of the ASD ( 50 mA max. at 1.0 kHz to 43.3 kHz ). As the output frequency of the ASD goes up so does the FP output pulse rate. This terminal may be programmed to provide an output pulse rate that is proportional to the magnitude of the user-selected item from Table 6 on pg. 237. For further information on this terminal see F676 on pg. 194.

AM - This output terminal produces an output current that is proportional to the output frequency of the ASD or of the magnitude of the function assigned to this terminal. The available assignments for this output terminal are listed in Table 6 on pg. 237. For further information on this terminal see F670 on pg. 192.

FM - This output terminal produces an output current or voltage that is proportional to the output frequency of the ASD or of the magnitude of the function assigned to this terminal. The available assignments for this output terminal are listed in Table 6 on pg. 237. For further information on this terminal see F005 on pg. 78. The Voltage/Current output selection is performed at F681.

FLA - One of two normally closed contacts that, under user-defined conditions, connect to FLC.
FLB - One of two normally open contacts that, under user-defined conditions, connect to FLC.
FLC - FLC is the common leg of a single-pole double-throw form C relay. The FL relay is the Fault Relay by default, but may be programmed to any of the selections of Table 8 on pg. 239. For further information on this terminal see F132 and Figure 8.

Note: The FLA, FLB, and FLC contacts are rated at 2A/120 VAC and 2A/30 VDC.
Figure 8. FLA, FLB, and FLC Switching Contacts Shown In The Normal Operating Condition.

Figure 9. Terminal Board.

See Figure 20 on pg. 26 for more information on the Terminal Board connections.
See the section titled Terminal Descriptions on pg. 22 for terminal descriptions.
See the section titled Cable/Terminal/Torque Specifications on pg. 265 for information on the proper cable/terminal sizes and torque specifications when making Terminal Board connections.

## I/O Circuit Configurations

## Typical Connection Diagram

Figure 20. The G9 ASD Typical Connection Diagram.
Note: When connecting multiple wires to any of ASD terminals, do not connect a solid wire and a stranded wire to the same terminal.

Note: The $\boldsymbol{A M}, \boldsymbol{F M}$, and the $+\boldsymbol{S U}$ analog terminals are referenced to $\boldsymbol{C C}$.
Note: $\quad$ The $\boldsymbol{P P}, \boldsymbol{R R}, \boldsymbol{R X}$, and the $\mathbf{P 2 4}$ analog terminals are referenced to $\boldsymbol{C C A}$.
Note: The isolated V/I analog terminal references IICC.

## Startup and Test

Before turning on the ASD ensure that:

- R/L1, S/L2, and T/L3 are connected to the 3-phase input power.
- U/T1, V/T2, and W/T3 are connected to the motor.
- The 3-phase input voltage is within the specified tolerance.
- There are no shorts and all grounds are secured.
- All personnel are at a safe distance from the motor and the motor-driven equipment.

## Electronic Operator Interface

The G9 ASD Electronic Operator Interface (EOI) is comprised of an LED Screen, an LCD Screen, two LEDs, a rotary encoder, and five keys. These items are shown and described on pg. 29.

## EOI Operation

The EOI is the primary input/output device for the user. The EOI may be used to monitor system functions, input data into the system, perform diagnostics, and view performance data (e.g., motor frequency, bus voltage, torque, etc.).

The software used with the ASD is menu driven; thus, making it a select-and-click environment. The operating parameters of a motor may be selected and viewed or changed using the EOI (or via communications).

## EOI Remote Mounting

The EOI may be mounted remotely using the optional ASD-MTG-KIT9. The kit contains all of the hardware required to mount the EOI of the 9 -Series ASD remotely.

System operation and EOI operation while using the remotely-mounted EOI are the same as with the ASD-mounted configuration.

Figure 21. The G9 ASD Electronic Operator Interface Features.

## EOI Features

LED Screen - Displays the running frequency, active Fault, or active Alarm information.
Rotary Encoder - Used to access the G9 ASD menu selections, change the value of a displayed parameter, and performs the Enter key function. Turn the Rotary Encoder either clockwise or counterclockwise to perform the Up or Down functions of the displayed menu selection. Press the Rotary Encoder to perform the Enter (select) function.

LCD Screen- Displays configuration information, performance data (e.g., output frequency, bus voltage, torque, etc.), diagnostic information, and LED Screen information in expanded normal text.

Local/Remote Key - Toggles the system to and from the Local and Remote modes. The Local/ Remote Key is disabled while the Fault screen is displayed. The LED is on when the system is in the Local Command mode. The Local mode allows the Command and Frequency control functions to be carried out via the EOI.

The Remote mode enables the Command and Frequency control functions to be carried out via the Terminal Board, RS485, Communication Card, Pulse Input, or the settings of F003/F004. The selection may be made via Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Settings $\Rightarrow$ Command Mode and Frequency Mode 1, respectively.

The availability of Local mode control (Command and Frequency control) may be disabled via Program $\Rightarrow$ Utilities $\Rightarrow$ Prohibition $\Rightarrow$ Local/Remote Key Command Override and Local/Remote Key Frequency Override. The availability of the Local mode of operation may be reinstated by changing this setting or performing a Reset (see F007).

ESC Key - Returns the system to the previous level of the menu tree, toggles between the EOI Command screen and the Frequency Command screen, or cancels changes made to a field if pressed while still in the reverse video mode (dark background/light text). The three functions are menu-specific.

Run Key - Issues the Run command while in the Local mode. The Run key LED illuminates green while stopped or red while running to alert personnel.

Mode Key - Provides a means to access the three root menus. Pressing the Mode Key key repeatedly loops the system through the three root menus (see Figure 27 on pg. 41). While looping through the root menus, the Program menu will display the root menu screen or the Program sub-menu item being accessed prior to pressing the Mode key.

Stop-Reset Key - This key has three functions.

1. Issues the Off command (decelerates to Stop at the programmed rate) if pressed once while in the Local mode in accordance with the setting of F721.
2. Initiates an Emergency Off Fault if pressed twice quickly from the Local or Remote modes. The Emergency Off function terminates the G9 ASD output and stops the motor in accordance with the setting of F603.
3. Resets active Faults if pressed twice quickly. The source of the Fault must be determined and corrected before normal ASD operation can resume.

## LED/LCD Screen

The LED Screen is used to display the output frequency, active alarms and/or active faults or Off. If there are no active alarms or faults, the output frequency is displayed.

During an active alarm, the display toggles to and from the running frequency and the active alarm.
During an active fault, the fault is displayed.
Loss of the ST-to-CC connection flashes Off.

## LED Character/Font Information

Characters displayed on the LED Screen will be of the seven-segment format. Not all alphanumeric characters are used with the LED Screen.

Listed are the seven-segment characters used on the LED Screen along with the same characters as they are displayed on the LCD Screen.

## LCD Font Information

All alpha-numeric characters are used.

| LED/LCD Screen Information |  |  |  |
| :---: | :---: | :---: | :---: |
| LED | LCD | LED | LCD |
| H | A | ! | 1 |
| $\square$ | b | 2 | 2 |
| [ | C | $\Xi$ | 3 |
| $\square$ | d | 4 | 4 |
| E | E | 5 | 5 |
| F | F | 5 | 6 |
| $\square$ | G | I | 7 |
| H | H | $\square$ | 8 |
| ; | I | 9 | 9 |
| $\stackrel{\text { - }}{ }$ | J | $\square$ | 0 |
| L | L |  |  |
| $\pi$ | M |  |  |
| $\square$ | n |  |  |
| $\square$ | 0 |  |  |
| P | P |  |  |

| - | - |  |  |

## LCD Screen

The LCD Screen is the primary user input/output information center. Parameter settings may be viewed or changed using the LCD Screen module of the EOI. To view or change a parameter setting using the LCD Screen, press the Mode key until the Program menu is displayed. Turn the Rotary Encoder until the desired Primary Menu item (see pg. 46) is within the cursor block. Press the Rotary Encoder to select the item from the Primary Menu (repeat the press-to-select function for submenu items).

See the section titled Default Setting Changes on pg. 74 for more information on changing parameter settings.

Upon reaching the desired parameter selection the current setting may be viewed, or selected and changed by pressing the Rotary Encoder - the setting will take on the reverse video format (dark background/ light text). Turn the Rotary Encoder to change the parameter setting. Press the ESC key while the new parameter setting is in the reverse video mode to exit the selection without saving the change or press the Rotary Encoder while the parameter setting is in the reverse video mode to accept the new change.

Repeated ESC key entries at any time takes the menu back one level each time the ESC key is pressed until the Frequency Command screen is reached. Further ESC entries will toggle the system to and from the Frequency Command screen and the EOI Command menu.

Note: $\quad$ Changes carried out from the EOI Command screen will be effective for EOIcontrolled ASD operation only. See the section titled EOI Command Mode on pg. 42 for further information on EOI Command Mode operations.

## Primary Menus of the LCD Screen

The three primary screens of the LCD Screen are displayed while accessing the associated operating mode: the Frequency Command, Monitor, and Program Menu screens.

Figure 22. Frequency Command Screen.

- Not-Ready-to-Run Indicator (ST-to-CC required) Ready-to-Run Indicator Appears When ST is Connected to CC

Figure 23. Monitor Screen (see pg. 43 for more on the Monitor Screen items).

## LED/LCD Screen Installation Note

When installing the LED/LCD Screen module of the EOI ensure that the left side of the display is inserted first with the top and bottom catches (see Phillips screws at underside of display) securely in place. This ensures the proper alignment and electrical connection of the CNX connector of the LED/LCD Screen module PCB. Gently hold the display in place while securing the Phillips mounting screw.

If improperly seated, the periphery of the LED/LCD Screen module will not be flush with the front panel surface and the unit will not function properly.

## Keypad Remote Mounting

The ASD may be controlled from a remotely-mounted keypad. For safety and application-specific reasons, some ASD installations will warrant that the operator not be in the vicinity during operation or that the keypad not be attached to the ASD housing. The keypad may be mounted either with or without the optional Remote Mounting Kit (P/N ASD-MTG-KIT). The ease of installation is enhanced by the Remote Mounting Kit (P/N 58333) which allows for keypad placement and easier cable routing.

Remote mounting will also allow for multiple keypad mountings at one location if controlling and monitoring several ASDs from a central location is required.

The keypad can operate up to 9 feet away from the ASD. A keypad extender cable is required for remote mounting. The keypad extender cable is available in a $9-\mathrm{ft}$. length and may be ordered through your Toshiba Sales Representative.

The optional dust cover (P/N ASD-BPC) may be used to cover the front panel opening of the ASD housing after removing the keypad.

## Remote Keypad Required Hardware

## Keypad Mounting Hardware

- EOI Remote-Mount Housing - P/N 58333 (included with 230-volt 40-HP and above; and with the 460-volt 75 HP and above)
- $6-32 \times 5 / 16$ " Pan Head Screw - P/N 50595 (4 ea.)
- \#6 Split-Lock Washer - P/N 01884 (4 ea.)
- \#6 Flat Washer - P/N 01885 (4 ea.)

## Bezel Plate Mounting Hardware

- Bezel Plate - P/N 52291
- 10-32 Hex Nut - P/N 01922 (4 ea.)
- \#10 Split-Lock Washer - P/N 01923 (4 ea.)
- \#10 Flat Washer - P/N 01924 (4 ea.)
- Dust Cover — P/N ASD-BPC (Optional)

## Extender Cable

- ASD-CAB10F: Cable, 9 ft .

## Keypad Installation Precautions

Install the unit securely in a well ventilated area that is out of direct sunlight using the four mounting holes at the rear of the keypad. The ambient temperature rating for the keypad is $14^{\circ}$ to $104^{\circ} \mathrm{F}\left(-10^{\circ}\right.$ to $\left.40^{\circ} \mathrm{C}\right)$.

- Select a mounting location that is easily accessible by the user.
- Avoid installation in areas where vibration, heat, humidity, dust, metal particles, or high levels of electrical noise (EMI) are present.
- Do not install the keypad where it may be exposed to flammable chemicals or gases, water, solvents, or other fluids.
- Turn on the power only after securing the front cover of the ASD.

## Keypad Remote Mounting w/o the ASD-MTG-KIT

Note: $\quad$ See Figure 25 for the dimensions and the item locations referenced in steps 1 through 5.

1. At the keypad mounting location, mark the 3.80 " by 3.56 " hole and the four $7 / 32$ " screw holes.
2. Cut the 3.80 " by 3.56 " rectangular hole.
3. Drill the four $7 / 32$ " screw holes.
4. Attach and secure the EOI to the front side of the mounting location using the four $6-32 \times 5 / 16$ " pan head screws, the \#6 split lock washers, and the \#6 flat washers.
5. Connect the extension cable.

## Keypad Mounting Dimensions

Figure 25. Keypad Mounting Dimensions.

## Keypad Remote Mounting Using the ASD-MTG-KIT

Note: $\quad$ See Figure 26 for the dimensions and the item locations referenced in steps 1 through 6.

1. At the keypad mounting location, mark the 4.60 " by 4.50 " hole and the four $11 / 32$ " screw holes.
2. Cut the 4.60 " by 4.50 " rectangular hole.
3. Drill the four $11 / 32$ " holes for the Bezel Plate mount.
4. Attach and secure the Bezel Plate to the front side of the mounting location using the four $10-32$ hex nuts, \#10 split lock washers, and the \#10 flat washers.
5. Attach and secure the keypad to the front side of the Bezel Plate using the four $6-32 \times 5 / 16$ " pan head screws, \#6 split lock washers, and the \#6 flat washers.
6. Connect the extension cable.

## Keypad ASD-MTG-KIT Mounting Dimensions

Figure 26. Keypad Bezel Plate Mounting Dimensions.

## Command Mode and Frequency Mode Control

Command control includes instructions such as Stop, Run, Jog, etc. The source of the Command signal must be established for normal operation.
Frequency commands control the output speed of the ASD. The source of the frequency control signal must be established for normal operation.

The source of the command control and speed control may be either internal or external. Once the source signal is selected for either function, the system may be configured to use the selected signal all of the time or switch under user-defined conditions.

Command and Frequency control may be carried out using any one of several control methods (signal sources) or combinations thereof. In the event that multiple control commands are received, the signal sources are assigned priority levels. The primary control method for Command and Frequency control uses the settings of F003 and F004, respectively.

## Command Control (F003)

The Command Mode selection of F003 establishes the primary source of the command input for the ASD. However, the Override feature may supersede the F003 setting as indicated in Table 3.

Table 3 on pg. 38 shows the hierarchy of the control

| 01:06 |
| :--- |
| Standard Mode Selection |
| (F003) Command Mode <br> Selection |
| Terminal Block | sources managed by the Override function. The level of the control item of the hierarchy is listed from left to right, most to least, respectively. As indicated in the table, the Override setting may supersede the F003 setting.

Placing the EOI in the Local mode selects the RS485 2-wire as the Command Mode control source Local mode operation may be superseded by other Override settings.

Example: With the EOI set to Local, Communication Board input or RS485 4-wire input will supersede EOI control input.

The remaining control sources may be placed into the Override mode using communications.
The source of the Command control signal may be selected by:

- The F003 setting,
- Placing an item from the Command signal source selections in the Override mode via communications, or
- Placing the EOI in the Local mode (places only the RS485 [2-wire] or the RS485 [4-wire] in the Override mode).

Possible Command signal source selections include the following:

- Terminal Block (default),
- EOI Keypad,
- RS485,
- Communication Option Board, or
- F003 setting (is used if no signal sources are in the Override mode).

> Note: $\quad$ The Terminal Board is placed in the Override mode for Command functions by assigning a discrete terminal to Command Terminal Board Priority and connecting the terminal to CC. Once activated (Run command required), the Terminal Board settings will be used for Override Command control (F, R, Preset Speeds, etc.).

## Frequency Control (F004)

The Frequency Mode 1 (or the Frequency Mode 2) setting establishes the user-selected source of the frequency-control input for the G9 ASD. The signal source selected here is used for speed control unless the Reference Priority Selection parameter is configured to switch this setting automatically (see

| $02: 06$ |
| :--- |
| Standard Mode Selection |
| (F004) Frequency Mode 1 |
|  |
| RR | F200) or if the Override feature is enabled.

Table 3 on pg. 38 shows the hierarchy of the control sources managed by the Override function. The level of the control item of the hierarchy is listed from left to right, most to least, respectively. As indicated in the table, the Override setting may supersede the selection at F004.

Placing the EOI in the Local mode selects the RS485 2-wire as the Frequency Mode 1 control source. Local mode operation may be superseded by other Override settings.

Example: With the EOI set to Local, the Communication Board input or the RS485 4-wire input will supersede EOI control input.

The remaining control sources may be placed into the Override mode using communications.
The source of the Frequency control signal may be selected by:

- The F004 setting,
- Placing an item from the Frequency control source selections in the Override mode via communications, or
- Placing the EOI in the Local mode (places only the RS485 [2-wire] in the Override mode).

Possible Frequency control source selections include the following:

- Communication Board,
- RS485,
- EOI Keypad,
- Terminal Block (the default setting), or
- F004 setting (used if no other items are in the Override mode).

Note: $\quad$ The Terminal Board is placed in the Override mode for Speed control functions by assigning a discrete terminal to V/I Terminal Priority and connecting the terminal to CC. Once the discrete terminal is activated, $V / I$ is used as the Terminal Board Override control item.

## Command and Frequency Control Selections

The user may select only one Command source and only one source for Frequency control. The default settings for Command and Frequency control are Terminal Block and RR, respectively.

The ASD has a command register for each item listed as a Command or Frequency source. The registers store the Override setting for each control source. The registers are continuously scanned to determine if any of the listed items are in the Override mode.

For each scan cycle, the command registers of the control sources are scanned for the Override setting in the order that they are listed in Table 3. The first item of the Command section and the first item of the Frequency section detected as being in the Override mode will be used for Command and Frequency control, respectively. If no items are detected as being in the Override mode, the settings of F003 and F004 will be used for Command and Frequency control, respectively.

Any or all of the Command and Frequency control input sources may be placed in the Override mode.

Placing the ASD in the Local mode (Local/Remote LED on) via the EOI places the RS485 2-wire control selection in the Override mode for Command and Frequency input (see the section titled Override Operation on pg. 38 for the proper setting). The Local/Remote control Override feature for Command and Frequency (or either) may be enabled/disabled at Program $\Rightarrow$ Utilities $\Rightarrow$ Prohibition $\Rightarrow$ Local/Remote Key (Command or Frequency) Override.

Communications may be used to place the remaining Command and eligible Frequency control input sources in the Override mode. Once placed in the Override mode this setting is valid until it is cancelled, the power supply is turned off, or the ASD is reset.

## Override Operation

The signal sources of Table 3 are scanned from left to right in the order that they are listed to determine which input sources are in the Override mode (active Command or Frequency command present). The first item detected as having the Override function turned on is the selection that is used for Command or Frequency control input.

The Override control setting supersedes the setting of the Command mode setting (F003) and the Frequency mode setting (F004). However, the F003 and F004 settings will be used in the event that the register scan returns the condition that none of the listed items have the Override feature turned on or a discrete input terminal is set to Serial/Local Switch and is activated.

## Command and Frequency-Control Override Hierarchy

Table 3 lists the input conditions and the resulting output control source selections for Command and Frequency control Override operation.

The ASD software reads the memory locations of the listed control sources from the left to the right.
The first item to be read that has the Override feature turned on will be used for Command or Frequency control.

Table 3. Command and Frequency Control Hierarchy.

| $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | Priority Level |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Forced F003/ <br> F004 by I/P <br> Terminal <br> (Assign to Serial/ <br> Local Switch) | Comm. <br> Board | RS485 | EOI/ <br> Keypad | Terminal Board <br> (Binary/BCD Input) | F003/F004 | Command/ <br> Frequency Mode |
| $\mathbf{1}$ | X | X | X | X | X | F003/F004 Setting |
| 0 | $\mathbf{1}$ | X | X | X | X | Communication Board |
| 0 | 0 | $\mathbf{1}$ | X | X | X | RS485 |
| 0 | 0 | 0 | $\mathbf{1}$ | X | X | EOI/Keypad |
| 0 | 0 | 0 | 0 | $\mathbf{1}$ | X | Terminal Board |
| 0 | 0 | 0 | 0 | 0 | F003/F004 <br> Setting | F003/F004 Setting |

Note: $\mathbf{1}=$ Override feature is turned on for that control input source; $\mathbf{0}=$ Override Off; $\boldsymbol{X}=$ Don't Care.

## Command Control Selections

The following is a listing with descriptions of the Command Mode (F003) selections (Program $\Rightarrow$
Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Command Mode Selection).
Settings:
0 - Terminal Block
Allows for Command control input via the

| 01:06 |
| :--- |
| Standard Mode Selection |
| (F003) Command Mode <br> Selection |
| Terminal Block | Terminal Board.

1 - Not Used
Unused.
2 - EOI Keypad
This setting is used for EOI command control.
3 - RS485
This setting is used to transfer commands to the ASD via RS485 4-wire.
4 - Communication Option Board
Use this setting if using the optional Communication Board for command control.

## Frequency Control Selections

The following is a listing with descriptions of the Frequency Mode (F004) selections (Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Frequency Mode 1).

| $02: 06$ |
| :--- |
| Standard Mode Selection |
| (F004) Frequency Mode 1 |
|  |
| RR (Default) |

Settings:
1 - VI/II (V/I)
Used when a 0 to 10 -volt DC analog input or a $0-20 \mathrm{~mA} \mathrm{DC}$ current input is used as the speed control input. Only one input signal type may be used at a time. Set SW301 to the desired signal type.

2 - RR
Used for a 0 to 10 -volt DC analog input signal.
3 - RX
Used for a -10 to +10 -volt DC analog input signal.
4 - Not Used
Unused.
5 - EOI Keypad
Used for EOI frequency control.
6 - RS485
Used to transfer speed commands to the ASD via RS485 4-wire.

## 7 - Communication Option Board

Use this setting if using the optional Communication Board for frequency control.
8 - RX2 Option (AI1)
Used for a -10 to +10 -volt DC analog input signal.

## 9 - Option V/I

Allows for the use of the optional voltage/current frequency-control interface.

## 10 - UP/DOWN Frequency

A discrete terminal may be configured to increase or decrease the speed of the motor by momentarily connecting the assigned discrete input terminal to CC. See F264 on pg. 128 for further information on this feature.

## 11 - Pulse Input Option

Used to allow the system to use a pulsed input for frequency control. See PG Input Point 1 Setting on pg. 122 for further information on this feature.

12 - Pulse Input (motor CPU)
Used to allow the system to use a pulsed input for frequency control. See PG Input Point 1 Setting on pg. 122 for further information on this feature.

## 13 - Binary/BCD Input Option

Allows for discrete terminal to be used for frequency-control input.

## System Configuration and Menu Options Root Menus

The Mode key accesses the three primary modes of the ASD: the Frequency Command mode, the Monitor mode, and the Program mode. From either mode, press the Mode key to loop through to the other two modes (see Figure 27). While in the Frequency Command mode, pressing the ESC key toggles the menu to and from the EOI Command mode and the Frequency Command mode.

The Alarm or Fault information will be displayed in the event of an active Alarm or Fault. Alarm text will be displayed on the Frequency Command screen and on the LED Screen when active. Fault information will be displayed via the Fault screen. See Alarms and Trips on pg. 244 for more information on Alarms and Trips.

Note: EOI Command mode changes are effective for EOI control Only.
Figure 27. G9 ASD Root Menu Navigation.

## Frequency Command Mode

## Frequency Setting

While operating in the Local mode (Local LED is illuminated on the front panel), the running frequency of the motor may be set from the Frequency Command screen. Using the Rotary Encoder, enter the Frequency Command value, connect ST to CC, provide a Run command ( F and/or R), and then press the Run key. The motor will run at the Frequency Command speed and may be changed while running. See Figure 22. on pg. 31 and Operation (Local) on pg. 73 for more information on the Frequency Command mode.

## EOI Command Mode

The EOI Command mode is accessed by pressing the ESC key from the Frequency Command screen.
The control settings of the EOI Command menu are effective for EOI control only.
The EOI Command mode provides quick access to the following menu parameters:

## Direction - Forward or Reverse.

Stop Pattern - The Decel Stop or Coast Stop settings determines the method used to stop the motor when using the Stop-Reset key of the EOI. The Decel Stop setting enables the Dynamic Braking system setup at F304 or the DC Injection Braking system setup at F250, F251, and F252. The Coast Stop setting allows the motor to stop at the rate allowed by the inertia of the load.

Note: $\quad$ The Stop Pattern setting has no effect on the Emergency Off settings of F603.
V/f Group - One of 4 V/f profiles may be selected and run. Each V/f profile is comprised of 4 user settings: Base Frequency, Base Frequency Voltage, Manual Torque Boost, and Electronic Thermal Protection. Expanded descriptions of these parameters may be found in the section titled Direct Access Parameter Information on pg. 76.

Accel/Decel Group - One of 4 Accel/Decel profiles may be selected and run. Each of the Accel/ Decel profiles is comprised of three user settings: Acceleration, Deceleration, and Pattern. Expanded descriptions of these parameters may be found in the section titled Direct Access Parameter Information on pg. 76 (or see F009).

Feedback in Panel Mode - This feature enables or disables the PID feedback function.
Torque Limit Group - This parameter is used to select 1 of 4 preset positive torque limits to apply to the active motor (of a multiple motor configuration). The settings of profiles $1-4$ may be setup at F441, F444, F446, and F448, respectively.

## Monitor Mode

The Monitor mode allows the user to monitor motor performance variables, control settings, and configuration data during motor operation. The items viewable from this mode are listed and described below.

Note: $\quad$ The Monitor mode is a read-only mode. The settings cannot be changed from the Monitor mode. For information on how to change the values, see the section titled Default Setting Changes on pg. 74.
Note: Any two of the Underlined monitored items may be selected for display at the Frequency Command screen while running via Program $\Rightarrow$ Utilities $\Rightarrow$ Main Monitor Selections (see pg. 45 for information on using the Main Monitor Selections feature).
Note: The F701 setting will determine if the Current and Voltage values displayed appear as $\boldsymbol{A}$ (Amps) and $\boldsymbol{V}$ (Voltage), or if the value is shown as a $\%$ (percentage) of the ASD rating.

Frequency at Trip - Displays the at-trip frequency.
Frequency Reference - Displays the Frequency Setpoint.
Output Current - Displays the Output Current as a percentage of the rated capacity of the ASD.
DC Bus Voltage - Displays the Bus Voltage as a percentage of the rated capacity of the ASD.
Output Voltage - Displays the Output Voltage as a percentage of the rated capacity of the ASD.
AM Output - Displays the AM output terminal value for the function assigned to the AM terminal.
FM Output - Displays the FM output terminal value for the function assigned to the FM terminal.
Motor OL (Overload) Real - Displays the real-time Motor Overload value as a percentage of the rated capacity of the motor.

Motor OL (Overload) Trip - Displays the Motor Overload Trip value as a percentage of the rated capacity of the motor.
Motor Load - Displays the real-time Motor Load as a percentage of the rated capacity of the motor.

ASD OL (Overload) Real - Displays the real-time ASD Overload as a percentage of the rated capacity of the ASD.
ASD OL (Overload) Trip - Displays the ASD Overload Trip value as a percentage of the rated capacity of the ASD.

ASD Load - Displays the ASD Load as a percentage of the rated capacity of the ASD.
Run Time - Displays the Cumulative Run Time in hours.
Compensation Frequency - Displays the Output Frequency after the application of the slip compensation correction value (Post Compensation Frequency).
DBR OL (Overload) Real - Displays the real-time DBR Overload value as a percentage of the Dynamic Braking Resistor capacity.

DBR OL (Overload) Trip - Displays the DBR Overload Trip value as a percentage of the Dynamic Braking Resistor capacity.
DBR Load - Displays the DBR Load as a percentage of the Dynamic Braking Resistor capacity.
Feedback (inst) — Provides a status of the Real Time Feedback in Hz.
Feedback (1 second) — Provides a status of the 1-Second Averaging feedback in Hz.

Torque - Displays the Output Torque as a percentage of the rated capacity of the ASD.
Torque Reference - Displays the Torque Reference as a percentage of the maximum torque available.

Torque Current - Displays the torque-producing current value.
Excitation Current - Displays the current value required to produce the excitation field.
PID Feedback - Provides a status of the PID Real Time Feedback in Hz.
Input Power - Displays the Input Power in Kilowatts (kW).
Output Power - Displays the Output Power in Kilowatts (kW).
Pattern Group Number - Displays the active Pattern Run Group Number.
Pattern Group Cycle - Displays the cycle number of the active Pattern Run Group.
Pattern Group Preset - Displays the active Preset Speed being run of the active Pattern Run Group.

Pattern Time - Displays the remaining time for the active Pattern Run Group.
$\mathbf{R R}$ - Displays the $\mathbf{R} \mathbf{R}$ input value as a percentage of the full range of the $\mathbf{R} \mathbf{R}$ value (potentiometer input).

V/I - Displays the $\mathbf{V} / \mathbf{I}$ input setting as a percentage of the full range of the $\mathbf{V} / \mathbf{I}$ value.
Note: $\quad$ The isolated V/I input terminal may receive Current or Voltage to control the output speed or the output torque. The input signal type must be selected at SW301 on the Terminal Board.

The V input setting of SW301 is used for the 0-10 VDC analog input signal and the I input setting of SW301 is used for the $0-20 \mathrm{~mA}$ analog input signal. Either may be used as a frequency or torque command source. See parameter F201 for more information on the setup of this terminal.

The LCD Screen shows the V/I terminal as VI/II (the additional character I is used to indicate "Input.").
$\mathbf{R X}$ - Displays the $\mathbf{R X}$ input setting as a percentage of the full range of the $\mathbf{R X}$ value ( -10 to +10 VDC input).

RX2 Option (Al1) - Displays the RX2 input setting as a percentage of the full range of the RX2 value.

Note: $\quad$ The RX2 function is available on the Expansion IO Card Option 1 option board (P/N ETB003Z) only.

Trip Code - Displays None if there are no errors, or displays one of the associated Fault Codes listed in Table 14 on page 248 if there is an active Fault (e.g., E = Emergency Off).

Past Trip 1 - This function records and displays the last trip incurred. Subsequent trips will replace Past Trip 1. As trip records are replaced they are shifted to the next level of the Past Trip locations until being deleted (i.e., Past Trip 1 is moved to Past Trip 2 and then to Past Trip 3 until being shifted out of Past Trip 4). Once shifted out of Past Trip 4 the record is deleted. If no trips have occurred since the last reset, None is displayed for each trip record.

Past Trip 2 - Past trip information or None.
Past Trip 3 - Past trip information or None.

Past Trip 4 - Past trip information or None.
Note: An improper ASD setup may cause some trips - reset the ASD to the Factory Default settings before pursuing a systemic malfunction (Program $\Rightarrow$ Utilities $\Rightarrow$ Type Reset $\Rightarrow$ Reset to Factory Settings).

Direction - Displays the Direction command (forward/reverse).
Discrete Input Terminals — Displays the status (activated = reverse video) of the discrete input terminals of the Terminal Board.

Discrete Output Terminals - Displays the status (activated = reverse video) of the discrete output lines of the Terminal Board.

## Main Monitor Selections

Two (2) Monitor Mode items may be selected from the Main Monitor Selections screen to be displayed on the Frequency Command screen while the ASD is running.

The selected items, along with their real-time values, are displayed on the Frequency Command screen while running. Not all Monitor Mode items are available for display on the Frequency Command screen. The available items are underlined on pg .43 and pg. 44.
Any two of the underlined items may be selected from the listing at Program $\Rightarrow$ Utilities $\Rightarrow$ Main Monitor Selections. Select an item from the Monitor 1 listing and another item from the Monitor 2 listing to be displayed as shown in Figure 22. on pg. 31.

## Program Mode Menu Navigation

The following table lists the menu items of the Program mode and maps the flow of the menu selections. The Parameter Numbers for the listed functions are provided where applicable.

The functions listed may be viewed or selected and changed as mapped below or via the Direct Access method: Program $\Rightarrow$ Direct Access $\Rightarrow$ Applicable Parameter Number.

| Program Mode Menu Navigation |  |  |  |
| :---: | :---: | :---: | :---: |
| Primary Menu | Sub Menu | Parameter Name | Parameter Number |
| Starup Wizard | See the section titled Initial Setup on pg. 70 for Startup Wizard Requirements. |  |  |

## System Operation Initial Setup

Upon initial system power up, the Startup Wizard starts automatically. The Startup Wizard assists the user with the initial configuration of the input power settings and the output parameters of the ASD.

The Startup Wizard may also be selected and run from the Program menu after the initial startup, if required.

The Startup Wizard querys the user to select one of the following items:

Run Now? $\Rightarrow$ Continue on to item 1 below.
Run Next Time? $\Rightarrow$ Go to Program Mode.
Manually Configure? $\Rightarrow$ Go to Finish screen and click Finish.

## Startup Wizard Parameters

Startup parameter settings may be viewed or changed. Change the parameter setting and click Next. Or click Next without making any changes to go to the next startup parameter.

See the section titled Startup Wizard Parameter Requirements on pg. 71 for further information on the Startup Wizard parameters.

Click Finish to close the Startup Wizard when done.

1. The Voltage and Frequency Rating of the Motor (Must make a selection to continue, or select Finish).
2. The Upper-Limit Frequency.
3. The Lower-Limit Frequency.
4. The Automatic Acceleration/Deceleration Setting.
5. The Acceleration Time.
6. The Deceleration Time.
7. The Volts per Hertz Setting.
8. The Motor Current Rating.
9. The Motor RPM.
10. The Command Source.
11. The Frequency Reference Source.
12. The Display Unit.
13. Wizard: Finish.

## Startup Wizard Parameter Requirements

The Startup Wizard queries the user for information on the I/O signal parameters, control, and the EOI display settings of the ASD. The ASD may also be setup by directly accessing each of the startup settings via the Program menu or the associated Direct Access Numbers (see the section titled Direct Access Parameter Information on pg. 76).

Upon initial system power up, the Startup Wizard starts automatically. It may also be run from the Program menu after startup, if required. The user is queried to either (1) Run Now, (2) Run Next Time, or (3) Manually Configure the ASD.

Select Run Now to start the Startup Wizard. The wizard will assist the user with the configuration of the ASD using the user-input screens below.

Select Run Next Time to return to the Program menu. The system will default to the Startup Wizard on the next power up.

Select Manually Configure to go to the Finish box. Click Finish to return the system to the Frequency Command screen.

## Voltage and Frequency Rating of the Motor

Motors are designed and manufactured to be operated within a specific voltage and frequency range. The voltage and frequency specifications for a given motor may be found on the nameplate of the motor. Highlight and click the voltage and frequency of the motor being used.

## Upper-Limit Frequency

This parameter sets the highest frequency that the ASD will accept as a frequency command or frequency setpoint. The ASD may output frequencies higher than the Upper-Limit Frequency (but, lower than the Maximum Frequency) when operating in the PID Control mode, Torque Control mode, or the Vector Control modes (sensorless or feedback).

## Lower-Limit Frequency

This parameter sets the lowest frequency that the ASD will accept as a frequency command or frequency setpoint. The ASD will output frequencies lower than the Lower-Limit Frequency when accelerating to the lower-limit or decelerating to a stop. Frequencies below the Lower-Limit may be output when operating in the PID Control mode, Torque Control mode, or the Vector Control modes (sensorless or feedback).

## Automatic Acceleration/Deceleration

When Automatic ACC/DEC is chosen, the ASD adjusts the acceleration and deceleration rates according to the applied load. The minimum accel/decel time may be set using F508. The motor and the load must be connected prior to selecting Automatic Accel/Decel.

Select Manual to allow the settings of F009 and F010 to control the accel/decel, respectively. The acceleration and deceleration times range from $12.5 \%$ to $800 \%$ of the programmed values for the active acceleration time.

Select Automatic ACC Only to allow for the acceleration rate to be controlled automatically only.

## Acceleration Time

This parameter specifies the time in seconds for the output of the ASD to go from 0.0 Hz to the Maximum Frequency for the $\mathbf{1}$ Acceleration profile. The Accel/Decel Pattern may be set using F502.

## Deceleration Time

This parameter specifies the time in seconds for the output of the ASD to go from the Maximum Frequency to 0.0 Hz for the $\mathbf{1}$ Deceleration profile. The Accel/Decel Pattern may be set using F502.

## Volts per Hertz Setting

This function establishes the relationship between the output frequency and the output voltage of the ASD.

Settings:
Constant Torque
Voltage Decrease Curve
Automatic Torque Boost
Sensorless Vector Control (Speed)
Sensorless Vector Control (Speed/Torque Switching)
V/f 5-Point Curve (Go to F190 to Configure the V/f 5-Point Settings)
PM Drive (Permanent Magnet)
PG Feedback Vector Control (Speed)
PG Feedback Vector Control (Speed/Torque Switching)

## Motor Current Rating

This parameter allows the user to input the full load amperage (FLA) of the motor. This value is found on the nameplate of the motor and is used by the ASD to determine the Thermal Overload Protection setting for the motor.

## Motor RPM

This parameter is used to input the (nameplated) rated speed of the motor.

## Command Source

This selection allows the user to establish the source of the Run commands. Run commands are Run, Stop, Jog, etc.

Settings:
Use Terminal Block
Use EOI Keypad
Use RS485
Use Communication Option Board

## Frequency Reference Source

This selection allows the user to establish the source of the Frequency command.
Settings:
Use VI/II (V/I)
Use RR
Use RX
EOI Keypad
RS485
Communication Option Board
RX2 Option (AI1)
Option V/I
UP/DOWN Frequency
Pulse Input (Option)
Pulse Input (Motor CPU)
Binary/BCD Input (Option)

## Display Unit

This parameter sets the unit of measurement for current and voltage values displayed on the EOI.

## Wizard: Finish

This is the final screen of the Startup Wizard. The basic parameters of the ASD have been set. Click Finish to return to the Program mode. Additional application-specific programming may be required.

## Operation (Local)

Note: $\quad$ See the section titled EOI Features on pg. 29 for information on Remote operation.
To turn the motor on perform the following:

1. Connect the $\mathbf{C C}$ terminal to the $\mathbf{S T}$ terminal.
2. Press the Mode key until the Frequency Command screen is displayed.
3. Press the Local/Remote key to enter the Local mode (green Local LED illuminates).
4. Turn the Rotary Encoder clockwise until the desired Frequency Command value is displayed in the SET field of the LCD Screen.

Frequency Command Screen

5. Press the Run key and the motor runs at the Frequency Command value.

Note: The speed of the motor may be changed while the motor is running by using the Rotary Encoder to change the Frequency Command value.
6. Press the Stop-Reset key to stop the motor.

## Default Setting Changes

To change a default parameter setting go to the root level of the Program menu. Turn the Rotary Encoder until the desired parameter group is within the cursor block. Press the Rotary Encoder to select an item or to access a subgroup (repeat if required until reaching the parameter to be changed).
Press the Rotary Encoder to enter the Edit mode and the value/setting takes on the reverse video format (dark background/light text). Turn the Rotary Encoder to change the parameter value/setting.

Press the Rotary Encoder while the parameter setting is in the reverse video mode to accept the new setting or press the ESC key while the new parameter setting is in the reverse video mode to exit the menu without saving the change.

For a complete listing of the Program mode menu selections, see the section titled Program Mode Menu Navigation on pg. 46. Program menu items are listed and mapped for convenience. The Direct Access Numbers are listed where applicable.

The default settings may also be changed by entering the Parameter Number of the setting to be changed at the Direct Access menu (Program $\Rightarrow$ Direct Access $\Rightarrow$ Applicable Parameter Number). A listing of the Direct Access Numbers and a description of the associated parameter may be found in the section titled Direct Access Parameter Information on pg. 76.

A listing of all parameters that have been changed from the default setting may be viewed sequentially by accessing the Changed From Default screen (Program $\Rightarrow$ Utilities $\Rightarrow$ Changed From Default).
Note: Parameter F201 was changed to create the example shown in Figure 28.
The Changed From Default feature allows the user to quickly access the parameters that are different from the factory default settings or the post-Reset settings. Once the Changed From Default screen is displayed, the system scrolls through all of the system parameters automatically and halts once reaching a changed parameter.

Once stopped at a changed parameter, the Rotary Encoder may be clicked once clockwise to continue scrolling forward or clicked once counterclockwise to begin scrolling in reverse. With each click of the Rotary Encoder from a stop, the system scrolls through the parameters and stops at the next parameter that has been changed.

Press the Rotary Encoder while stopped at a changed parameter to display the settings of the changed parameter. Press the Rotary Encoder to enter the Edit mode - the parameter value/setting takes on the reverse video format (dark background/light text).Turn the Rotary Encoder to change the parameter setting.

Press the ESC key while the setting is in the reverse video format to exit the Edit mode without saving the change and to resume the Changed From Default search. Or press the Rotary Encoder while the setting is in the reverse video format to save the change. Press ESC to return to the Changed From Default search.

Pressing ESC while the system is performing a Changed From Default search terminates the search. Pressing ESC when finished searching (or halted at a changed parameter) takes the menu back one level.
Note: Communications setting changes will require that the ASD power be removed and then re-applied for the changes to take affect.

## Save User Settings

A profile of an existing setup may be saved and re-applied when required by using the Save User Setup feature. This function is carried out via Program $\Rightarrow$ Utilities $\Rightarrow$ Type Reset $\Rightarrow$ Save User Settings.
With the initial setup saved, troubleshooting and diagnostics may be performed and the starting setup may be re-applied when finished via Program $\Rightarrow$ Utilities $\Rightarrow$ Type Reset $\Rightarrow$ Restore User Settings.

Note: EOI settings are not stored using the Save User Settings or using the Restore User Settings features (i.e., contrast setting, voltage/current units, display gradient characteristics, etc.).

## Direct Access Parameter Information

The ASD has the ability to allow the user direct access to the motor-control functions. There are two ways in which the motor-control parameters may be accessed for modification: Program $\Rightarrow$ Applicable Menu Path or Program $\Rightarrow$ Direct Access $\Rightarrow$ Applicable Parameter Number. Both methods access the parameter via the Program mode. Once accessed, the parameter may be viewed or changed.

The Program mode allows the user to develop an application-specific motor-control profile. Motorcontrol functions may be set to accommodate specific power and timing requirements for a given application. The configurable parameters of the Program mode that have user-accessible Parameter Numbers are listed and described below.

Note: Parameter selections are preceded by the number used to select an item if using communications to write to a parameter location in memory (i.e., F000 $\Rightarrow \underline{0}$-Manual, $\underline{1}$ - No Trip on Acc/Dec, $\underline{2}$-No trip on Acc Only, etc.).

Note: The setup procedures included within this section may require a Reset before performing the procedure. Application-specific settings may then be performed. The pre-Reset conditions may be saved (see F007).

Note: Communications setting changes will require that the power be removed and then re-applied for the changes to take affect.

## Direct Access Parameters/Numbers

## Automatic Acceleration/Deceleration

Program $\Rightarrow$ Fundamental $\Rightarrow$ Accel/Decel 1 Settings
This parameter is used to enable automatic acceleration and deceleration rates in accordance with the applied load.

The adjusted acceleration and deceleration times range from $12.5 \%$ to $800 \%$ of the programmed values for Acceleration Time 1 (F009) and Deceleration Time 1 (F010).

Settings:
0 - Manual
1 - Automatic ACC/DEC
2 - Automatic ACC Only
Note: $\quad$ The motor and the load must be connected prior to selecting Automatic Acceleration/Deceleration.

## Automatic Torque Boost

Program $\Rightarrow$ Fundamental $\Rightarrow$ Motor Set 1
This parameter allows the ASD to adjust the output torque in accordance with the applied load automatically. When enabled Autotuning is performed - the motor should be connected before performing an Autotune.

## Settings:

0 - Disabled
1 - Automatic Torque Boost + Autotuning
2 - Sensorless Vector Control + Autotuning

## Direct Access Number - F000

Parameter Type - Selection List
Factory Default - Manual
Changeable During Run - No

Direct Access Number - F001
Parameter Type - Selection List
Factory Default - Disabled
Changeable During Run - No

## Command Mode

Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection

The Command Mode Selection establishes the source of the command input for the ASD. Command inputs include Run, Stop, Forward, etc. The Override feature may supersede the Command Mode Selection setting (see Command Mode and Frequency Mode Control on pg. 36).

Settings:
0 - Terminal Block
1 - Not Used
2 - EOI Keypad
3 - RS485
4 - Communication Option Board

## Frequency Mode 1

Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection
The Frequency Mode 1 setting establishes the source of the frequency-control input for the ASD. The Frequency Mode 2 setting or the Override feature may supersede the Frequency Mode 1 setting.

Note: Only Bolded items from the Settings list below may be placed in the Override mode. See the section titled Command Mode and Frequency Mode Control on pg. 36 for more information on the Override feature.

Direct Access Number - F003<br>Parameter Type - Selection List<br>Factory Default - Terminal Block<br>Changeable During Run - No

## Direct Access Number - F004

Parameter Type - Selection List
Factory Default - RR
Changeable During Run - No

Settings:
1 - VI/II (V/I)
2 - RR
3 - RX
5 - EOI Keypad
6 - RS485
7 - Communication Option Board
8 - RX2 Option (AI1)
9 - Option V/I
10 - UP/DOWN Frequency
11 - Pulse Input (Option)
12 - Pulse Input (Motor CPU)
13 - Binary/BCD Input (Option)

## FM Output Terminal Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Analog Output Terminals
This parameter is used to set the output function of the FM analog output terminal. The FM output terminal produces an output current or voltage that is proportional to the magnitude of the function assigned to this terminal (select current or voltage at F 681 ). The available assignments for this output terminal are listed in Table 6 on pg. 237.

Note: To read voltage at this terminal connect a $100-500 \Omega$ resistor from the $\boldsymbol{F M}(+)$ terminal to the $\boldsymbol{C C}(-)$ terminal. Using a voltmeter read the voltage across the $100-500 \Omega$ resistor.

To read current at this terminal connect a $100-500 \Omega$ resistor from the $\boldsymbol{F M}(+)$ terminal through a series Ammeter to the CC (-) terminal.

The FM analog output has a maximum resolution of 1/1024 and a maximum load rating of 500 ohms.

## FM Terminal Setup Parameters

## F005 - Set FM Function

F006 - Calibrate FM Terminal
F681 - Voltage/Current Output Switching Selection
F682 - Output Response Polarity Selection
F683 - Set Zero Level

## FM Output Terminal Adjustment

Program $\Rightarrow$ Terminal $\Rightarrow$ Analog Output Terminals
This parameter is used to calibrate the FM analog output.
To calibrate the FM analog output, connect a meter (current or voltage) as described at F005.

With the drive running at a known value (e.g., output frequency), adjust this parameter until the assigned function produces the desired DC level output at the $\mathbf{F M}$ output terminal.

See F005 for more information on this setting.

Direct Access Number - F005<br>Parameter Type - Selection List<br>Factory Default - Output Frequency<br>Changeable During Run - Yes

## Direct Access Number - F006

Parameter Type - Numerical
Factory Default - 493
Changeable During Run - Yes
Minimum - 1
Maximum - 1280

## Type Reset

Program $\Rightarrow$ Utilities
This feature assists the user when performing fault analysis or by allowing a quick system setup change when required. Performing a Type Reset results in one of the following user-selected post-reset configurations.

## Settings:

$0-$ None
$1-50$ Hz Setting
$2-60$ Hz Setting
$3-$ Reset to Factory Settings
4 - Clear Past Trips
5 - Clear Run Timer
6 - Initialize Typeform
7 - *Save User Settings
8 - Restore User Settings
9 - Clear Cumulative Fan Timer
10 - Accel/Decel Time Setting $0.01-600.0$ Seconds
11 - Accel/Decel Time Setting $0.1-6000.0$ Seconds
12 - Update EOI Firmware
13 - Set EOI Memory to Default
14 - Save User Settings to EOI
15 - Restore User Settings from EOI

## Note: User settings stored in the memory of the EOI are not saved via the Save User Settings selection.

## Forward/Reverse Run Selection

Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection
While operating in the Local mode, this parameter sets the direction of motor rotation.

From the Frequency Command screen press the ESC key. At the subsequent EOI Command screen select the Direction field and change the setting. Press the Rotary Encoder and the new setting will be in effect.

This setting will not override parameter F311 (Forward/Reverse Disable).
If either direction is disabled via parameter F311, the disabled direction will not be recognized if commanded by the keypad. If both directions are disabled via parameter F311, the direction command from the keypad will determine the direction of the motor rotation.

## Settings:

0 - Forward
1 - Reverse
2 - Forward (EOI-Switchable F/R)
3 - Reverse (EOI-Switchable F/R)

## Direct Access Number - F007 <br> Parameter Type - Selection List <br> Factory Default - None <br> Changeable During Run - No

Direct Access Number - F008
Parameter Type - Selection List
Factory Default - Forward
Changeable During Run - Yes

## Acceleration Time 1

Program $\Rightarrow$ Fundamental $\Rightarrow$ Accel/Decel 1 Settings

This parameter specifies the time in seconds for the output of the ASD to go from 0.0 Hz to the Maximum Frequency for the $\mathbf{1}$ Acceleration profile. The Accel/Decel pattern may be set using F502. The minimum Accel/Decel time may be set using F508.
Note: An acceleration time shorter than that which the load will allow may cause nuisance tripping and mechanical stress to loads. Automatic Accel/Decel, Stall, and Ridethrough settings may lengthen the acceleration times.

## Acceleration

The acceleration rate of a motor is determined by several factors: applied power, applied load, and the physical properties of the motor (winding parameters, motor size, etc.). The ASD will control the first of these factors: input power. The settings of the ASD will control the frequency and amplitude of the applied voltage to the motor.

Under most operating conditions, as the output frequency of the drive goes up so does the output voltage (linear acceleration). The ASD has the ability to modify the relationship between frequency and voltage automatically to produce smoother operation or increased (starting) torque (See F502).

## Deceleration Time 1

Program $\Rightarrow$ Fundamental $\Rightarrow$ Accel/Decel 1 Settings

This parameter specifies the time in seconds for the output of the ASD to go from the Maximum Frequency to 0.0 Hz for the 1 Deceleration profile. The Accel/Decel pattern may be set using F502.

When operating with the Automatic Accel/Decel enabled (F000) the minimum accel/decel time may be set using F508.
Note: A deceleration time shorter than the load will allow may cause nuisance tripping and mechanical stress to loads. Automatic Accel/Decel, Stall, and Ridethrough settings may lengthen the deceleration times.

## Maximum Frequency <br> Program $\Rightarrow$ Fundamental $\Rightarrow$ Frequency Settings

This setting determines the absolute maximum frequency that the ASD can output.
Accel/Decel times are calculated based on the Maximum Frequency setting.
The Maximum Frequency is not limited by this setting while operating in the Drooping Control mode (see F320 for more information on this setting).

Note: $\quad$ This setting may not be lower than the Upper-Limit Frequency (F012)

## Direct Access Number - $\mathbf{F 0 0 9}$

Parameter Type - Numerical
Factory Default - (ASD-Dependent)
Changeable During Run - Yes
Minimum - 0.1
Maximum - 6000
Units - Seconds

## Direct Access Number - F010

Parameter Type - Numerical
Factory Default - (ASD-Dependent)
Changeable During Run - Yes
Minimum - 0.1
Maximum - 6000
Units - Seconds

Direct Access Number - F011
Parameter Type - Numerical
Factory Default — $\mathbf{8 0 . 0}$
Changeable During Run - No
Minimum - 30.0
Maximum - 299.0
Units - Hz

## Upper-Limit Frequency <br> Program $\Rightarrow$ Fundamental $\Rightarrow$ Frequency Settings

This parameter sets the highest frequency that the ASD will accept as a frequency command or frequency setpoint. The ASD may output frequencies higher than the Upper-Limit Frequency (but, lower than the Maximum Frequency) when operating in the PID Control mode, Torque Control mode, or the Vector Control modes (sensorless or feedback).

Note: $\quad$ This setting may not be higher than the Maximum Frequency (F011) setting

## Lower-Limit Frequency

Program $\Rightarrow$ Fundamental $\Rightarrow$ Frequency Settings
This parameter sets the lowest frequency that the ASD will accept as a frequency command or frequency setpoint. The ASD will output frequencies lower than the Lower-Limit Frequency when accelerating to the Lower-Limit or decelerating to a stop. Frequencies below the Lower-Limit may also be output when operating in the PID Control mode, Torque Control mode, or the Vector Control modes (sensorless or feedback).

## Base Frequency 1

Program $\Rightarrow$ Fundamental $\Rightarrow$ Motor Set 1

The Base Frequency 1 setting is the frequency at which the output voltage of the ASD reaches its maximum setting. The Base Frequency Voltage 1 parameter is set at F409.

For proper motor operation, the Base Frequency should be set for the nameplated frequency of the motor.

## V/f Pattern

Program $\Rightarrow$ Fundamental $\Rightarrow$ Frequency Settings
This function establishes the relationship between the output frequency and the output voltage.

Bolded selections use the motor tuning parameters of the drive to properly configure the ASD for the motor being used. If Load Reactors or Long Lead Filters are used, or if the capacity of the ASD is greater than the motor, manual tuning of the motor parameters may be required for optimum performance.

Settings:
0 - Constant Torque
1 - Voltage Decrease Curve
2 - Automatic Torque Boost
3 - Sensorless Vector Control (Speed)
4 - Sensorless Vector Control (Speed/Torque Switching)
5 - V/f 5-Point Curve (Go to F190 to Configure the V/f 5-Point settings)
6 - PM Drive (Permanent Magnet)
7 - PG Feedback Vector Control (Speed)
8 - PG Feedback Vector Control (Speed/Torque Switching)
Note: $\quad$ When operating in the Vector Control mode the carrier frequency should be set to 2.2 kHz or above.

Direct Access Number - F012

Direct Access Number - F015
Parameter Type - Selection List
Factory Default - Constant Torque
Changeable During Run - No

## Manual Torque Boost 1

Program $\Rightarrow$ Fundamental $\Rightarrow$ Motor Set 1

The Manual Torque Boost 1 function is used to increase the low frequency torque for high-inertia loads by increasing the output voltage at frequencies below $1 / 2$ of the Base Frequency 1 (F014) setting

The value programmed as a boost percentage establishes an output voltage vs. output frequency relationship to be used to start the motor or to provide smoother operation.

```
Direct Access Number - F016

Maximum - 30.0
Units - \%
```

Direct Access Number - F017

## Preset Speed 1

Program $\Rightarrow$ Frequency $\Rightarrow$ Preset Speeds
Up to fifteen (15) output frequency values that fall within the Lower-Limit and the Upper-Limit range may be programmed into the drive and output as a Preset Speed. This parameter assigns an output frequency to binary number 0001 and is identified as Preset Speed 1. The binary number is applied to $\mathbf{S 1}$ S4 of the Terminal Board to output the Preset Speed.

Perform the following setup to allow the system to receive Preset Speed control input at the $\mathbf{S 1}$ - S4 terminals:

1. Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Command Mode Selection $\Rightarrow$ Terminal Block.
2. $\quad$ Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals $\Rightarrow \mathbf{S 1}$ (set to Preset Speed 1; LSB of 4-bit count). Repeat for $\mathbf{S 2}$ - S4 (MSB of 4-bit count) as Preset Speed 2-4, respectively (all Normally Open).
3. Program $\Rightarrow$ Frequency $\Rightarrow$ Preset Speeds $\Rightarrow$ Preset Speed 1 (set an output frequency as Preset Speed 1; repeat for Preset Speeds 2 - 15 as required).
4. Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Mode $\Rightarrow$ Preset Speed Operation Mode $\Rightarrow$ Enabled/Disabled.

Select Enable to use the direction, accel/decel, and torque settings of the Preset Speed being run. The torque settings used will be as defined in F170 - F181 and as selected via the associated discrete input terminals V/f Switching $\mathbf{1}$ and $\mathbf{2}$ in Table 5 on pg. 234.

Select Disabled to use the speed setting only of the Preset Speed being run.
5. Place the system in the Remote mode (Local/Remote LED Off).
6. Provide a Run command (connect F and/or R to CC ).

Connect $\mathbf{S 1}$ to $\mathbf{C C}$ to run Preset Speed 1 ( $\mathbf{S 1}$ to $\mathbf{C C}=0001$ binary)
With S1 - S4 configured to output Preset Speeds (F115 - F118), 0001 - 1111 may be applied to S1 - S4 of the Terminal Board to run the associated Preset Speed. If bidirectional operation is required, $\mathbf{F}$ and $\mathbf{R}$ must be connected to $\mathbf{C C}$, and Preset Speed Operation Mode must be set to Enabled at F560.
With $\mathbf{S 1}$ being the least significant bit of a binary count, the $\mathbf{S 1}$ - $\mathbf{S 4}$ settings will produce the programmed speed settings as indicated in the Preset Speed

Direct Access Number - F018
Parameter Type - Numerical
Factory Default - $\mathbf{0 . 0}$
Changeable During Run - Yes
Minimum - Lower Limit (F013)
Maximum - Upper Limit (F012)
Units - Hz

## Automatic Function Selection

Program $\Rightarrow$ Utilities $\Rightarrow$ Display Parameters
This parameter setting is used to configure multiple parameters with the setting of only one parameter. From the selection below multiple parameters may be set as indicated in the table.

Once set, the selected configuration is placed in effect and remains in effect until this parameter is changed or the individual settings are changed.

Set this parameter to Disable to set these parameters individually.
Note: After performing the desired selection the EOI display returns to Disabled though the selected function has been carried out (i.e., without this, if selection 1 is performed, F004 and F207 would hold the RR terminal setting regardless of attempts to change the settings individually).

## Settings:

0 - Disabled
1 - RR
$2-\mathrm{VI} / \mathrm{II}(\mathrm{V} / \mathrm{I})$
3 - RR or V/I Switched via Terminal Board
4 - Keypad Frequency/Terminal Board Command
5 - Keypad Frequency and Command

## Direct Access Number - F040

Parameter Type - Selection List
Factory Default - Disabled
Changeable During Run - No

## Low-Speed Signal Output Frequency <br> Program $\Rightarrow$ Terminal $\Rightarrow$ Reach Settings

The Low-Speed Signal Output Frequency parameter sets a frequency threshold that activates the assigned output terminal for the duration that the ASD output is equal to or above this setting (see Table 8 on pg. 239 for the available output assignments).

## Speed Reach Frequency

Program $\Rightarrow$ Terminal $\Rightarrow$ Reach Settings

The Speed Reach Frequency sets a frequency threshold that, when reached or is within the bandwidth specified by parameter F102, activates the assigned output terminal for the duration that the ASD output is within the bandwidth specified (see Table 8 on pg. 239 for the available output assignments).

## Speed Reach Detection Band

Program $\Rightarrow$ Terminal $\Rightarrow$ Reach Settings
This parameter sets the bandwidth of the Speed Reach Frequency (F101) setting.

Direct Access Number - F100
Parameter Type - Numerical
Factory Default - $\mathbf{0 . 0 0}$
Changeable During Run - Yes
Minimum - 0.00
Maximum - Max. Freq. (F011)
Units - Hz
Direct Access Number - F101
Parameter Type - Numerical
Factory Default - $\mathbf{0 . 0 0}$
Changeable During Run - Yes
Minimum - 0.00
Maximum - Max. Freq. (F011)
Units - Hz
Direct Access Number - F102
Parameter Type - Numerical
Factory Default - $\mathbf{2 . 5 0}$
Changeable During Run - Yes
Minimum - 0.00
Maximum - Max. Freq. (F011)
Units - Hz
Direct Access Number - F105
Parameter Type - Selection List
Factory Default - Suspend
Changeable During Run - No
Simultaneous F and R activation.

## Input Terminal Priority

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Special Functions

This parameter is used to allow the Jog and DC Injection Braking input signals to control the ASD when received via the Terminal Board even though the system is in the Local mode.

With this parameter enabled, a Jog command or a DC Injection Braking command received from the Terminal Board will receive priority over commands from the EOI

See F260 for more information on using the Jog function.
See F250 - F252 for more information on DC Injection Braking
Settings:
0 - Disabled
1 - Enabled

## 16-Bit Binary/BCD Input <br> Program $\Rightarrow$ Terminal $\Rightarrow$ Input Special Functions

The extended terminal function is used with the Expansion IO Card Option (P/N ETB004Z).

This parameter defines the format of the binary or BCD data when using the option card.

Note: The Expansion IO Card Option 2 option board is required to use this terminal.

See the Expansion IO Card Option 1 Instruction Manual (P/N 58685) for more information on the function of this terminal

## Settings:

0 - None
1-12-Bit Binary
2 - 16-Bit Binary
3 - 3-Digit BCD
4-4-Digit BCD
5 - Inverted 12-Bit Binary
6 - Inverted 16-Bit Binary
7 - Inverted 3-Digit BCD
8 - Inverted 4-Digit BCD
Selections using 16 -bit binary or 4 -digit BCD will require the configuration of terminals S1-S4 on the Terminal Board as binary bits $0-3$ (F115-F118). The Frequency Mode 1 (F004) parameter must be set to Binary/BCD.

For proper scaling of the binary or BCD input, parameters F228 - F231 must be configured.

## Direct Access Number - F106

Parameter Type - Selection List
Factory Default - Disabled
Changeable During Run - No

## Direct Access Number - F107

Parameter Type - Selection List
Factory Default - None
Changeable During Run - No

## Option V/I Terminal Voltage/Current Selection

Program $\Rightarrow$ Frequency $\Rightarrow$ V/I Settings

This parameter is used to set the AI2 input terminal to receive either current or voltage as a control signal.

Note: $\quad$ The Expansion IO Card Option 2 option board (P/N ETB004Z) is required to use this terminal.

See the Expansion IO Card Option 2 Instruction Manual (P/N 58686) for more information on the function of this terminal.

Settings:
0 - Voltage Input
1 - Current Input

```
Always ON 1 Terminal 1
Program \(\Rightarrow\) Terminal \(\Rightarrow\) Input Terminals \(\Rightarrow\) ON
```

This parameter is used to set the functionality of the virtual discrete input terminal $\mathbf{O N}$. As a virtual terminal, the $\mathbf{O N}$ control terminal exists only in memory and is considered to always be in its True (connected to CC) state.

It is often practical to assign a function to this terminal that the user desires to be maintained regardless of external conditions or operations.

This parameter sets the programmable $\mathbf{O N}$ terminal to any one of the userselectable functions listed in Table 5 on pg. 234.

## Input Terminal 1 (F) Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals

This parameter is used to set the functionality of the $\mathbf{F}$ discrete input terminal.
In addition, this input terminal must be specified as Normally Open or Normally Closed.

This parameter sets the programmable $\mathbf{F}$ terminal to any one of the userselectable functions listed in Table 5 on pg. 234.

## Input Terminal 2 (R) Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals

This parameter is used to set the functionality of the $\mathbf{R}$ discrete input terminal. In addition, this input terminal must be specified as Normally Open or Normally Closed.

This parameter sets the programmable $\mathbf{R}$ terminal to any one of the userselectable functions listed in Table 5 on pg. 234.

## Input Terminal 3 (ST) Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals

This parameter is used to set the functionality of the ST discrete input terminal.
In addition, this input terminal must be specified as Normally Open or Normally Closed.

This parameter sets the programmable ST terminal to any one of the userselectable functions listed in Table 5 on pg. 234.

## Input Terminal 4 (RES) Function <br> Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals

This parameter is used to set the functionality of the RES discrete input terminal.

In addition, this input terminal must be specified as Normally Open or Normally Closed

This parameter sets the programmable RES terminal to any one of the userselectable functions listed in Table 5 on pg .234.

## Input Terminal 5 (S1) Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals
This parameter is used to set the functionality of the $\mathbf{S 1}$ discrete input terminal. In addition, this input terminal must be specified as Normally Open or Normally Closed

This parameter sets the programmable $\mathbf{S 1}$ terminal to any one of the userselectable functions listed in Table 5 on pg .234.

## Input Terminal 6 (S2) Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals

This parameter is used to set the functionality of the $\mathbf{S 2}$ discrete input terminal. In addition, this input terminal must be specified as Normally Open or Normally Closed

This parameter sets the programmable $\mathbf{S 2}$ terminal to any one of the userselectable functions listed in Table 5 on pg .234.

## Input Terminal 7 (S3) Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals

This parameter is used to set the functionality of the $\mathbf{S 3}$ discrete input terminal.
In addition, this input terminal must be specified as Normally Open or Normally Closed

This parameter sets the programmable $\mathbf{S 3}$ terminal to any one of the userselectable functions listed in Table 5 on pg .234.

## Input Terminal 8 (S4) Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals
This parameter is used to set the functionality of the $\mathbf{S 4}$ discrete input terminal. In addition, this input terminal must be specified as Normally Open or Normally Closed

This parameter sets the programmable $\mathbf{S 4}$ terminal to any one of the userselectable functions listed in Table 5 on pg .234.

## Input Terminal 9 (LI1) Function <br> Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals

This parameter is used to set the functionality of the LI1 discrete input terminal.
In addition, this input terminal must be specified as Normally Open or Normally Closed
This setting assigns the function of the programmable LI1 terminal to any one of the user-selectable functions listed in Table 5 on pg. 234.

Note: $\quad$ The Expansion IO Card Option 1 option board (P/N ETB003Z) is required to use this terminal.

See the Expansion IO Card Option 1 Instruction Manual (P/N 58685) for more information on the function of this terminal

| Input Terminal 10 (LI2) Function | Direct Access Number-F120 |
| :--- | :--- |

This setting assigns the function of the programmable LI8 terminal to any one of the user-selectable functions listed in Table 5 on pg. 234.

Note: $\quad$ The Expansion IO Card Option 2 option board (P/N ETB004Z) is required to use this terminal.

See the Expansion IO Card Option 2 Instruction Manual (P/N 58686) for more information on the function of this terminal.

## Output Terminal 1 (OUT1) Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Output Terminals
This parameter is used to set the functionality of the OUT1 discrete output terminals O1A and O1B.

The O1A and O1B (OUT1) output terminals change states (open or close) as a function of a user-selected event. See Table 8 on pg. 239 for listing the possible assignments for the OUT1 terminals.
In addition, the output terminals must be specified as Normally Open or Normally Closed.

See parameter F669 for more information on this setting.

Output Terminal 2 (OUT2) Function
Program $\Rightarrow$ Terminal $\Rightarrow$ Output Terminals
This parameter is used to set the functionality of the OUT2 discrete output terminals O2A and O2B.

The O2A and O2B (OUT2) output terminals change states (open or close) as a function of a user-selected event. See Table 8 on pg. 239 for listing the possible assignments for the OUT2 terminals.

In addition, the output terminals must be specified as Normally Open or Normally Closed.

See parameter F669 for more information on this setting

## Output Terminal 3 (FL) Function <br> Program $\Rightarrow$ Terminal $\Rightarrow$ Output Terminals

This parameter is used to set the functionality of the FL output terminals to one of the functions listed in Table 8 on pg. 239

In addition, the output terminals must be specified as Normally Open or Normally Closed

## Output Terminal 4 (OUT3) Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Output Terminals
This parameter is used to set the functionality of the OUT3 discrete output terminal.

In addition, this input terminal must be specified as Normally Open or Normally Closed

This setting assigns the function of the programmable OUT3 terminal to any one of the user-selectable functions listed in Table 8 on pg. 239.

Note: The Expansion IO Card Option 1 option board (P/N ETB003Z) is required to use this terminal.

See the Expansion IO Card Option 1 Instruction Manual (P/N 58685) for more information on the function of this terminal.
Output Terminal 5 (OUT4) Function
Program $\Rightarrow$ Terminal $\Rightarrow$ Output Terminals
This parameter is used to set the functionality of the OUT4 discrete output terminal.

In addition, this input terminal must be specified as Normally Open or Normally Closed
This setting assigns the function of the programmable OUT4 terminal to any one of the user-selectable functions listed in Table 8 on pg. 239.

Note: The Expansion IO Card Option 1 option board (P/N ETB003Z) is required to use this terminal.

See the Expansion IO Card Option 1 Instruction Manual (P/N 58685) for more information on the function of this terminal

## Output Terminal 6 (R1) Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Output Terminals
This parameter is used to set the functionality of the $\mathbf{R 1}$ discrete output terminal.

In addition, this input terminal must be specified as Normally Open or Normally Closed

This setting assigns the function of the programmable $\mathbf{R 1}$ terminal to any one of the user-selectable functions listed in Table 8 on pg. 239.

Note: $\quad$ The Expansion IO Card Option 1 option board (P/NETB003Z) is required to use this terminal.

See the Expansion IO Card Option 1 Instruction Manual (P/N 58685) for more information on the function of this terminal.

## Output Terminal 7 (OUT5) Function <br> Program $\Rightarrow$ Terminal $\Rightarrow$ Output Terminals

This parameter is used to set the functionality of the OUT5 discrete output terminal.

In addition, this output terminal must be specified as Normally Open or Normally Closed.

This setting assigns the function of the programmable OUT5 terminal to any one of the user-selectable functions listed in Table 8 on pg. 239.

Note: The Expansion IO Card Option 2 option board (P/N ETB004Z) is required to use this terminal

See the Expansion IO Card Option 2 Instruction Manual (P/N 58686) for more information on the function of this terminal.

## Output Terminal 8 (OUT6) Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Output Terminals
This parameter is used to set the functionality of the OUT6 discrete output terminal.

In addition, this output terminal must be specified as Normally Open or Normally Closed.

This setting assigns the function of the programmable OUT6 terminal to any one of the user-selectable functions listed in Table 8 on pg. 239.

Note: $\quad$ The Expansion IO Card Option 2 option board (P/N ETB004Z) is required to use this terminal.

See the Expansion IO Card Option 2 Instruction Manual (P/N 58686) for more information on the function of this terminal

## Output Terminal 9 (R2) Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Output Terminals
This parameter is used to set the functionality of the $\mathbf{R 2}$ discrete output terminal.

In addition, this output terminal must be specified as Normally Open or Normally Closed.

This setting assigns the function of the programmable $\mathbf{R 2}$ terminal to any one of the user-selectable functions listed in Table 8 on pg. 239.

Note: The Expansion IO Card Option 2 option board (P/N ETB004Z) is required to use this terminal.

See the Expansion IO Card Option 2 Instruction Manual (P/N 58686) for more information on the function of this terminal.

The delay may be increased to provide additional electrical noise immunity or to prevent the ASD from responding to contact bounce or chatter.

## Input Terminal 2 (R) Response Time

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminal Delays
This parameter delays the response of the drive to any change in the $\mathbf{R}$ terminal input by the programmed value (see waveforms at F140).

The delay may be increased to provide additional electrical noise immunity or to prevent the ASD from responding to contact bounce or chatter.

## Input Terminal 3 (ST) Response Time

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminal Delays
This parameter delays the response of the drive to any change in the ST terminal input by the programmed value (see waveforms at F140).

The delay may be increased to provide additional electrical noise immunity or to prevent the ASD from responding to contact bounce or chatter.

## Input Terminal 4 (RES) Response Time <br> Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminal Delays

This parameter delays the response of the drive to any change in the RES terminal input by the programmed value (see waveforms at F140),

The delay may be increased to provide additional electrical noise immunity or to prevent the ASD from responding to contact bounce or chatter.

## Input Terminal 5-12 Response Time

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminal Delays

This parameter delays the response of the drive to any change in the $\mathbf{5} \mathbf{- 1 2}$ terminal inputs by the programmed value (see waveforms at F140).

The delay may be increased to provide additional electrical noise immunity or to prevent the ASD from responding to contact bounce or chatter.

Input Terminal 13-20 Response Time
Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminal Delays
This parameter delays the response of the drive to any change in the 13-20 terminal inputs by the programmed value (see waveforms at F140).

The delay may be increased to provide additional electrical noise immunity or to prevent the ASD from responding to contact bounce or chatter.

## Input Terminal 17 (B12) Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals
This parameter is used to set the functionality of the $\mathbf{B 1 2}$ discrete input terminal.

In addition, this input terminal must be specified as Normally Open or Normally Closed

This setting assigns the functionality of the programmable $\mathbf{B 1 2}$ terminal to any one of the user-selectable functions listed in Table 5 on pg. 234.
See the My Function Instruction Manual (P/N E6581335) for more information on the function of this terminal.

Input Terminal 18 (B13) Function
Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals
This parameter is used to set the functionality of the $\mathbf{B 1 3}$ discrete input terminal.
In addition, this input terminal must be specified as Normally Open or Normally Closed

This setting assigns the function of the programmable B13 terminal to any one of the user-selectable functions listed in Table 5 on pg. 234.

See the My Function Instruction Manual (P/N E6581335) for more information on the function of this terminal.

## Input Terminal 19 (B14) Function <br> Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals

This parameter is used to set the functionality of the $\mathbf{B 1 4}$ discrete input terminal.

In addition, this input terminal must be specified as Normally Open or Normally Closed

This setting assigns the function of the programmable B14 terminal to any one of the user-selectable functions listed in Table 5 on pg. 234.

See the My Function Instruction Manual (P/N E6581335) for more information on the function of this terminal.

## Input Terminal 20 (B15) Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals

This parameter is used to set the functionality of the $\mathbf{B 1 5}$ discrete input terminal.
In addition, this input terminal must be specified as Normally Open or Normally Closed

This setting assigns the function of the programmable B15 terminal to any one of the user-selectable functions listed in Table 5 on pg. 234.
See the My Function Instruction Manual (P/N E6581335) for more information on the function of this terminal.

Output Terminal 10 (R3) Function
Program $\Rightarrow$ Terminal $\Rightarrow$ Output Terminals
This parameter sets the functionality of the $\mathbf{R} \mathbf{3}$ output terminal to any one of the user-selectable functions listed in Table 8 on pg. 239.
In addition, the output terminals must be specified as Normally Open or Normally Closed
See the 16-bit BIN/BCD Option Instruction Manual for more information on the function of this terminal.

## Output Terminal 11 (R4) Function <br> Program $\Rightarrow$ Terminal $\Rightarrow$ Output Terminals

This parameter sets the functionality of the $\mathbf{R 4}$ output terminal to any one of the user-selectable functions listed in Table 8 on pg. 239.

In addition, the output terminals must be specified as Normally Open or Normally Closed

See the 16-bit BIN/BCD Option Instruction Manual option for more information on the function of this terminal.

## Base Frequency 2

Program $\Rightarrow$ Motor $\Rightarrow$ Motor Set 2
The Base Frequency 2 setting is the frequency at which the output voltage of the ASD reaches its maximum setting. The Base Frequency Voltage 2 parameter is set at F171.

This parameter is used only when the parameters for Motor Set $\mathbf{2}$ are configured and selected. Motor Set $\mathbf{2}$ may be selected by a properly configured input terminal (see Table 5 on pg. 234).
For proper motor operation, the Base Frequency should be set for the nameplated frequency of the motor.

## Base Frequency Voltage 2

Program $\Rightarrow$ Motor $\Rightarrow$ Motor Set 2
The Base Frequency Voltage $\mathbf{2}$ setting is the Motor $\mathbf{2}$ output voltage at the Base Frequency (F170). Regardless of the programmed value, the output voltage cannot be higher than the input voltage.

The actual output voltage will be influenced by the input voltage of the ASD and the Supply Voltage Compensation setting (F307)

This parameter is used only when the parameters for Motor Set $\mathbf{2}$ are configured and selected. Motor Set 2 may be selected by a properly configured input terminal (see Table 5 on pg. 234).

## Manual Torque Boost 2

Program $\Rightarrow$ Motor $\Rightarrow$ Motor Set 2
The Manual Torque Boost 2 function is used to increase the low frequency torque for high inertia loads by increasing the output voltage at frequencies below $1 / 2$ of the Base Frequency 2 setting (F170).

See parameter F016 (Manual Torque Boost 1) for an explanation of torque boost.

This parameter is used only when the parameters for Motor Set $\mathbf{2}$ are configured and selected. Motor Set $\mathbf{2}$ may be selected by a properly configured input terminal (see Table 5 on pg. 234).

## Motor Overload Protection Level 2

Program $\Rightarrow$ Motor $\Rightarrow$ Motor Set 2
The Motor 2 Overload Protection Level parameter specifies the motor overload current level for Motor Set 2. This value is entered as either a percentage of the full load rating of the ASD or as the FLA of the motor.

The unit of measurement for this parameter may be set to Amps (A/V) or it may be set as a percentage of the ASD rating. The nameplated FLA of the motor may be entered directly when $\mathbf{A m p s}$ is selected as the unit of measurement (see F701 to change the display unit),

The Motor 2 Overload Protection Level setting will be displayed in Amps if the EOI display units are set to $\mathbf{A} / \mathbf{V}$ rather than \%

Direct Access Number - F170

## Base Frequency 3

Program $\Rightarrow$ Motor $\Rightarrow$ Motor Set 3
The Base Frequency 3 setting is the frequency at which the output voltage of the ASD reaches its maximum setting. The Base Frequency Voltage 3 parameter is set at F175.
This parameter is used only when the parameters for Motor Set $\mathbf{3}$ are configured and selected. Motor Set $\mathbf{3}$ may be selected by a properly configured input terminal (see Table 5 on pg. 234).

For proper motor operation, the Base Frequency should be set for the nameplated frequency of the motor.

## Base Frequency Voltage 3

Program $\Rightarrow$ Motor $\Rightarrow$ Motor Set 3
The Base Frequency Voltage $\mathbf{3}$ setting is the Motor Set $\mathbf{3}$ output voltage at the Base Frequency (F174). Regardless of the programmed value, the output voltage cannot be higher than the input voltage.
The actual output voltage will be influenced by the input voltage of the ASD and the Supply Voltage Compensation setting (F307).
This parameter is used only when the parameters for Motor Set $\mathbf{3}$ are configured and selected. Motor Set $\mathbf{3}$ may be selected by a properly configured input terminal (see Table 5 on pg. 234).

## Manual Torque Boost 3

Program $\Rightarrow$ Motor $\Rightarrow$ Motor Set 3
The Manual Torque Boost 3 function is used to increase the low frequency torque for high inertia loads by increasing the output voltage at frequencies below $1 / 2$ of the Base Frequency 3 setting (F174)
See parameter F016 (Manual Torque Boost 1) for an explanation of torque boost.
This parameter is used only when the parameters for Motor Set $\mathbf{3}$ are configured and selected. Motor Set 3 may be selected by a properly configured input terminal (see Table 5 on pg. 234).

## Motor Overload Protection Level 3

Program $\Rightarrow$ Motor $\Rightarrow$ Motor Set 3
The Motor 3 Overload Protection Level parameter specifies the motor overload current level for Motor Set 3. This value is entered as either a percentage of the full load rating of the ASD or as the FLA of the motor.
The unit of measurement for this parameter may be set to Amps (A/V) or it may be set as a percentage of the ASD rating. The nameplated FLA of the motor may be entered directly when Amps is selected as the unit of measurement (see F701 to change the display unit)

The Motor 3 Overload Protection Level setting will be displayed in Amps if the EOI display units are set to $\mathbf{A} / \mathbf{V}$ rather than \%.

## Base Frequency 4

Program $\Rightarrow$ Motor $\Rightarrow$ Motor Set 4
The Base Frequency $\mathbf{4}$ setting is the frequency at which the output voltage of the ASD reaches its maximum setting. The Base Frequency Voltage 4 parameter is set at F179.

This parameter is used only when the parameters for Motor Set 4 are configured and selected. Motor Set 4 may be selected by a properly configured input terminal (see Table 5 on pg. 234).
For proper motor operation, the Base Frequency should be set for the nameplated frequency of the motor.

## Base Frequency Voltage 4

Program $\Rightarrow$ Motor $\Rightarrow$ Motor Set 4
The Base Frequency Voltage $\mathbf{4}$ is the Motor $\mathbf{4}$ output voltage at the Base Frequency (F178). Regardless of the programmed value, the output voltage cannot be higher than the input voltage.

The actual output voltage will be influenced by the input voltage of the ASD and the Supply Voltage Compensation setting (F307).

This parameter is used only when the parameters for Motor Set 4 are configured and selected. Motor Set 4 may be selected by a properly configured input terminal (see Table 5 on pg. 234).

## Manual Torque Boost 4

Program $\Rightarrow$ Motor $\Rightarrow$ Motor Set 4
The Manual Torque Boost 4 function is used to increase the low frequency torque for high inertia loads by increasing the output voltage at frequencies below $1 / 2$ of the $\mathbf{4}$ Base Frequency setting (F178)

See parameter F016 (Manual Torque Boost 1) for an explanation of torque boost.

This parameter is used only when the parameters for Motor Set 4 are configured and selected. Motor Set 4 may be selected by a properly configured input terminal (see Table 5 on pg. 234).

## Motor Overload Protection Level 4

Program $\Rightarrow$ Motor $\Rightarrow$ Motor Set 4
The Motor 4 Overload Protection Level parameter specifies the motor overload current level for Motor Set 4. This value is entered as either a percentage of the full load rating of the ASD or as the FLA of the motor.

The unit of measurement for this parameter may be set to Amps (A/V) or it may be set as a percentage of the ASD rating. The nameplated FLA of the motor may be entered directly when $\mathbf{A m p s}$ is selected as the unit of measurement (see F701 to change the display unit).

The Motor 4 Overload Protection Level setting will be displayed in Amps if the EOI display units are set to $\mathbf{A} / \mathbf{V}$ rather than $\%$.

Direct Access Number - F178

## V/f 5-Point Setting Frequency 1

Program $\Rightarrow$ Special $\Rightarrow$ V/f 5-Point Setting
The V/f 5-Point Setting Frequency $\mathbf{1}$ setting establishes the frequency that is to be associated with the voltage setting of F191 (V/f 5-Point Setting Voltage $1)$.
The V/f 5-Point settings define a volts per hertz relationship for the startup output of the ASD.
To enable this function, set the V/f Pattern (F015) selection to the V/f 5-Point Curve setting.
V/f Curves may be useful in starting high inertia loads such as rotary drum vacuum filters.

Direct Access Number - F190
Parameter Type - Numerical
Factory Default - $\mathbf{0 . 0 0}$
Changeable During Run - No
Minimum - 0.00
Maximum - Max. Freq. (F011)
Units - Hz

## V/f 5-Point Setting Voltage 1

Program $\Rightarrow$ Special $\Rightarrow$ V/f 5-Point Setting
The V/f 5-Point Setting Voltage 1 establishes the output voltage level that is to be associated with the frequency setting of F190 (V/f 5-Point Setting Frequency 1).

The F701 parameter setting will determine if the on-screen selection for this parameter appears in the form of a Voltage (V) or as a Percentage (\%) of the ASD rating.

If using Voltage as a unit of measure and with no voltage correction (F307 Disabled), the limit of the on-screen display value for this parameter is 200 volts for the 230 -volt ASD and 400 volts for the 460 -volt ASD.

The actual output voltage is scaled to the maximum EOI display values (e.g., a 100 -volt EOI display corresponds to a 115 -volt actual output for the 230 -volt ASD - $1 / 2$ of the full display range).

If using $\%$ as a unit of measure and with no voltage correction (F307 Disabled), the ASD output voltage will be the percentage setting times 230 for the 230volt unit (or $\%$ times 460 volts for the 460 -volt unit).

See F190 for additional information on this setting.

## V/f 5-Point Setting Frequency 2

Program $\Rightarrow$ Special $\Rightarrow$ V/f 5-Point Setting
The V/f 5-Point Setting Frequency 2 sets the frequency to be associated with the voltage setting of parameter F193 (V/f 5-Point Setting Voltage 2).
See F190 and F191 for additional information on this setting.

Direct Access Number - F191
Parameter Type - Numerical
Factory Default - $\mathbf{0 . 0}$
Changeable During Run - No
Minimum - 0.0
Maximum - 100.0
Units - V or \% (F701)

## Direct Access Number - F192

Parameter Type - Numerical
Factory Default - $\mathbf{0 . 0 0}$
Changeable During Run - No
Minimum - 0.00
Maximum - Max. Freq. (F011)
Units - Hz

## V/f 5-Point Setting Voltage 2

Program $\Rightarrow$ Special $\Rightarrow$ V/f 5-Point Setting
The V/f 5-Point Setting Voltage 2 establishes the output voltage level that is to be associated with the frequency setting of F192 (V/f 5-Point Setting Frequency 2).

The F701 parameter setting will determine if the selection for this parameter appears in the form of a Voltage (V) or as a Percentage (\%) of the ASD rating.

The default setting is \%.
See F190 and F191 for additional information on this setting.

## V/f 5-Point Setting Frequency 3

Program $\Rightarrow$ Special $\Rightarrow$ V/f 5-Point Setting
The V/f 5-Point Setting Frequency $\mathbf{3}$ sets the frequency to be associated with the voltage setting of parameter F195 (V/f 5-Point Setting Voltage 3).
See F190 and F191 for additional information on this setting.

## V/f 5-Point Setting Voltage 3

Program $\Rightarrow$ Special $\Rightarrow$ V/f 5-Point Setting
The V/f 5-Point Setting Voltage 3 establishes the output voltage level that is to be associated with the frequency setting of F194 (V/f 5-Point Setting Frequency $3)$.

The F701 parameter setting will determine if the selection for this parameter appears in the form of a Voltage (V) or as a Percentage (\%) of the ASD rating.

The default setting is \%.
See F190 and F191 for additional information on this setting.

## V/f 5-Point Setting Frequency 4

Program $\Rightarrow$ Special $\Rightarrow$ V/f 5-Point Setting
The V/f 5-Point Setting Frequency $\mathbf{4}$ sets the frequency to be associated with the voltage setting of parameter F197 (V/f 5-Point Setting Voltage 4).
See F190 and F191 for additional information on this setting.

## V/f 5-Point Setting Voltage 4 <br> Program $\Rightarrow$ Special $\Rightarrow$ V/f 5-Point Setting

The V/f 5-Point Setting Voltage $\mathbf{4}$ establishes the output voltage level that is to be associated with the frequency setting of F196 (V/f 5-Point Setting Frequency 4).

The F701 parameter setting will determine if the selection for this parameter appears in the form of a Voltage (V) or as a Percentage (\%) of the ASD rating.

The default setting is \%.
See F190 and F191 for additional information on this setting.

## V/f 5-Point Setting Frequency 5 <br> Program $\Rightarrow$ Special $\Rightarrow$ V/f 5-Point Setting

The V/f 5-Point Setting Frequency 5 sets the frequency to be associated with the voltage setting of parameter F199 (V/f 5-Point Setting Voltage 5).

See F190 and F191 for additional information on this setting.

## V/f 5-Point Setting Voltage 5

Program $\Rightarrow$ Special $\Rightarrow$ V/f 5-Point Setting
The V/f 5-Point Setting Voltage 5 establishes the output voltage level that is to be associated with the frequency setting of F198 (V/f 5-Point Setting Frequency 5).

The F701 parameter setting will determine if the selection for this parameter appears in the form of a Voltage (V) or as a Percentage (\%) of the ASD rating.

The default setting is \%.
See F190 and F191 for additional information on this setting.

## Frequency Priority Selection <br> Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection

Either Frequency Mode 1 or Frequency Mode $\mathbf{2}$ may control the output frequency of the ASD. This parameter determines which of the two will control the output frequency and the conditions in which control will be switched from one to the other.

Note: Frequency Mode is abbreviated as FMOD.
Settings:

> 0 - FMOD changed by Terminal Board (Frequency Mode)
> 1 - FMOD (F208) (Frequency Mode)

The Frequency Mode 1 or Frequency Mode 2 selection specifies the source of the input frequency command signal. These selections are performed at F004 and F207, respectively.

If FMOD changed by Terminal Board is selected here, the ASD will follow the control of the discrete input terminal assigned the function of Frequency Priority. The discrete terminal Frequency Priority will toggle control to and from Frequency Mode 1 and Frequency Mode 2 with each activation/ deactivation.

If FMOD (F208) is selected here, the ASD will follow the control of the Frequency Mode 1 setting for the duration that the commanded frequency of the Frequency Mode $\mathbf{1}$ setting is greater than the setting of F208.

If the commanded frequency of the Frequency Mode 1 setting is less than or equal to the setting of F208 the ASD will follow the setting of Frequency Mode 2.

```
Direct Access Number - F198

```
Direct Access Number - F200
Parameter Type - Selection List
Factory Default - FMOD (changed by
TB)
```

Changeable During Run - Yes
f the frequency command of Frequency Mode 1 is greater than the F208 setting,
Frequency Mode 1 has priority over Frequency Mode 2 .
If the frequency command of Frequency Mode 1 is equal to or less than the F208 setting, Frequency Mode 2 has priority.

## VI/II (V/I) Input Point 1 Setting

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the gain and bias of the isolated $\mathbf{V} / \mathbf{I}$ input terminal when the $\mathbf{V} / \mathbf{I}$ terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.

This parameter sets the $\mathbf{V} / \mathbf{I}$ input level that is associated with the $\mathbf{V} / \mathbf{I}$ Input Point 1 Frequency setting when operating in the Speed control mode or is associated with the $\mathbf{V} / \mathbf{I}$ Input Point 1 Rate setting when operating in the Torque Control mode.

Note: See note on pg. 44 for more information on the V/I terminal.

## V/I Input Speed Control Setup

Perform the following setup to allow the system to receive Speed control input at the $\mathbf{V} / \mathbf{I}$ input terminal:

- Set SW301 of the Terminal Board to Voltage or Current (see Figure 9 on pg. 24).
- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Frequency Mode $1 \Rightarrow \mathbf{V} / \mathbf{I}$.
- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Command Mode Selection $\Rightarrow$ Terminal Block

## Speed Control

Perform the following setup to allow the system to perform Speed control from the $\mathbf{V} / \mathbf{I}$ input terminal:

- Set V/I Input Point 1 Frequency (F202).
- Set V/I Input Point 1 Setting (F201) - the input analog signal level that corresponds to the frequency setting at $\mathrm{V} / \mathrm{I}$ Input Point 1 Frequency.
- Set V/I Input Point 2 Frequency (F204).
- Set V/I Input Point 2 Setting (F203) - the input analog signal level that corresponds to the frequency setting at $V / I$ Input Point 2 Frequency.
- Provide a Run command (F and/or R).

Once set, as the $\mathbf{V} / \mathbf{I}$ input voltage or current changes, the output frequency of the ASD will vary in accordance with the above settings.

This parameter value is entered as $0 \%$ to $100 \%$ of the V/I input signal range.
The $\mathbf{V} / \mathbf{I}$ input is commonly used for a $4-20 \mathrm{~mA}$ current loop signal where 4 mA equals $20 \%$ of a 20 mA signal. Set this parameter to $20 \%$ for $4-20 \mathrm{~mA}$ current loop signal applications.

Note: When using the isolated V/I input terminal the IICC terminal must be used as the return (negative) connection.

Note: If using P24 to power a transducer that is to be used to supply the V/I input signal, it may be necessary to connect IICC to CCA.

## Direct Access Number - F201

Minimum - 0
Maximum - 100
Units - \%
Frequency Settings

## VI/II (V/I) Input Point 1 Frequency <br> Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints

This parameter is used to set the gain and bias of the $\mathbf{V} / \mathbf{I}$ input terminal when the $\mathbf{V} / \mathbf{I}$ terminal is used as the control input while operating in the Speed Control mode.

This parameter sets V/I Input Point 1 Frequency and is the frequency that is associated with the setting of $\mathbf{V} / \mathbf{I}$ Input Point 1 Setting when operating in the Speed Control mode.
See V/I Input Point 1 Setting (F201) for more information on this setting.
VIIII (VII) Input Point 2 Setting
Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the gain and bias of the $\mathbf{V} / \mathbf{I}$ input terminal when the $\mathbf{V} / \mathbf{I}$ terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.

This parameter sets the $\mathbf{V} / \mathbf{I}$ input level that is associated with $\mathbf{V} / \mathbf{I}$ Input Point 2 Frequency when operating in the Speed control mode or is associated with the V/I Input Point 1 Rate when operating in the Torque Control mode.

This value is entered as $0 \%$ to $100 \%$ of the $\mathbf{V} / \mathbf{I}$ input signal range.
See V/I Input Point 1 Setting (F201) for more information on this setting when used for Speed control

See V/I Input Point 1 Rate (F205) for more information on this setting when used for Torque Control.

## VI/II (V/I) Input Point 2 Frequency

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the gain and bias of the $\mathbf{V} / \mathbf{I}$ input terminal when the $\mathbf{V} / \mathbf{I}$ terminal is used as the control input while operating in the Speed Control mode.

This parameter sets V/I Input Point 2 Frequency and is the frequency that is associated with the setting of V/I Input Point 2 Setting when operating in the Speed Control mode.

See V/I Input Point 1 Setting (F201) for more information on this setting

## VI/II (V/I) Input Point 1 Rate <br> Program $\Rightarrow$ Torque $\Rightarrow$ Setpoints

This parameter is used to set the gain and bias of the isolated $\mathbf{V} / \mathbf{I}$ input terminal when the $\mathbf{V} / \mathbf{I}$ terminal is used as the control input while operating in the Torque Control mode.

## V/I Input Torque Control Setup

Perform the following setup to allow the system to receive Torque Control input at the $\mathbf{V} / \mathbf{I}$ input terminal:

- Set SW301 of the Terminal Board to Voltage or Current (see Figure 9 on pg. 24).
- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Frequency Mode 1 $\Rightarrow$ V/I.
- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Command Mode Selection $\Rightarrow$ Terminal Block.

## Torque Control

Perform the following setup to allow the system to perform Torque Control from the $\mathbf{V / I}$ input terminal:

- Set V/I Input Point 1 Rate (F205).
- Set V/I Input Point 1 Setting (F201) - the input analog signal level that corresponds to the torque setting at $\mathrm{V} / \mathrm{I}$ Input Point 1 Rate.
- Set V/I Input Point 2 Rate (F206).
- Set V/I Input Point 2 Setting (F203) - the input analog signal level that corresponds to the torque setting at $\mathbf{V} / \mathbf{I}$ Input Point 2 Rate.
- Provide a Run command ( $\mathbf{F}$ and/or $\mathbf{R}$ ).

Torque Control is accomplished by establishing an associated $\mathbf{V} / \mathbf{f}$ output pattern for a given $\mathbf{V} / \mathbf{I}$ input level.

Once set, as the $\mathbf{V} / \mathbf{I}$ input voltage changes or the $\mathbf{V} / \mathbf{I}$ current changes, the output torque of the ASD will vary in accordance with the above settings.

This parameter sets V/I Input Point 1 Rate and is the output torque value that is associated with the setting of $\mathbf{V} / \mathbf{I}$ Input Point 1 Setting when operating in the Torque Control mode.

This value is entered as $0 \%$ to $250 \%$ of the rated torque.
Note: When using the isolated V/I input terminal the IICC terminal must be used as the return (negative) connection.

```

Torque Settings

## VI/II (V/I) Input Point 2 Rate <br> Program $\Rightarrow$ Torque $\Rightarrow$ Setpoints

This parameter is used to set the gain and bias of the $\mathbf{V} / \mathbf{I}$ input terminal when the $\mathbf{V} / \mathbf{I}$ terminal is used as the control input while operating in the Torque Control mode.

Torque Control is accomplished by establishing an associated $\mathbf{V} / \mathbf{f}$ output pattern for a given $\mathbf{V} / \mathbf{I}$ input level.

This parameter sets V/I Input Point 2 Rate and is the output torque value that is associated with the setting of $\mathbf{V} / \mathbf{I}$ Input Point 2 Setting when operating in the Torque Control mode.
This value is entered as $0 \%$ to $250 \%$ of the rated torque.
See V/I Input Point 1 Rate (F205)for more information on this setting.

## Frequency Mode 2

Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection
This parameter is used to set the source of the frequency command signal to be used as Frequency Mode 2 in the event that Frequency Mode 1 is disabled or if Frequency Mode $\mathbf{2}$ is set up as the primary control parameter.

See F004 and F200 for additional information on this setting.

## Settings:

1 - VI/II (V/I)
$2-R R$

## Analog Input Filter <br> Program $\Rightarrow$ Frequency $\Rightarrow$ Analog Filter <br> Settings: <br> $$
\begin{aligned} & 0 \text { - None }(1 \mathrm{mS}) \\ & 1 \text {-Small }(8 \mathrm{mS}) \\ & 2 \text { - Medium }(16 \mathrm{mS}) \\ & 3 \text { - Large }(32 \mathrm{mS}) \\ & 4 \text { - Huge }(64 \mathrm{mS}) \end{aligned}
$$

Analog filtering is applied after the analog reference signal is converted to a digital signal. The type of filtering used is Rolling Average over time.

The analog input signal is sampled and converted to a digital signal. With no filtering applied, the resulting digital value is scaled for use by the microprocessor of the ASD.

If the filtering selection Small is selected, the ASD averages the last $\mathbf{8} \mathbf{~ m S}$ of sampled signal and converted (digital) values. The rolling average is updated (every $4 \mu$ S) and scaled for use by the microprocessor.

This holds true for the Medium, Large, and Huge selections providing a larger sample to produce the average for use by the microprocessor.

False responses to electrical noise are eliminated with no loss in bandwidth because the value used by the drive is the average value of several samples.

Direct Access Number - F209
Parameter Type - Selection List
Factory Default - None
Changeable During Run - Yes

## RR Input Point 1 Setting

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the gain and bias of the $\mathbf{R R}$ input terminal when the $\mathbf{R} \mathbf{R}$ terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.

This parameter sets the $\mathbf{R R}$ input level that is associated with the RR Input Point 1 Frequency setting when operating in the Speed control mode or is associated with the RR Input Point 1 Rate setting when operating in the Torque Control mode.

## Speed Control

Perform the following setup to allow the system to perform Speed control from the $\mathbf{R} \mathbf{R}$ input terminal:

- Set RR Input Point 1 Frequency (F211).
- Set RR Input Point 1 Setting (F210) - the input analog signal level that corresponds to the frequency setting at RR Input Point 1 Frequency.
- Set RR Input Point 2 Frequency (F213).
- Set RR Input Point 2 Setting (F212) - the input analog signal level that corresponds to the frequency setting at RR Input Point 2 Frequency.

## RR Input Speed Control Setup

Perform the following setup to allow the system to receive Speed control input at the $\mathbf{R R}$ input terminal:

- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Frequency Mode $1 \Rightarrow \mathbf{R R}$.
- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Command Mode Selection $\Rightarrow$ Terminal Block.
- Provide a Run command ( F and/or R).

Once set, as the $\mathbf{R R}$ input voltage changes, the output frequency of the ASD will vary in accordance with the above settings.
This parameter value is entered as $0 \%$ to $100 \%$ of the $\mathbf{R R}$ input signal range.

## RR Input Point 1 Frequency

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the gain and bias of the $\mathbf{R} \mathbf{R}$ input terminal when the $\mathbf{R} \mathbf{R}$ terminal is used as the control input while operating in the Speed Control mode.

This parameter sets RR Input Point 1 Frequency and is the frequency that is associated with the setting of RR Input Point 1 Setting when operating in the Speed Control mode.
See RR Input Point 1 Setting (F210) for more information on this setting.

## RR Input Point 2 Setting

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the gain and bias of the $\mathbf{R R}$ input terminal when the $\mathbf{R R}$ terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.
This parameter sets the RR input level that is associated with RR Input Point $\mathbf{2}$
Frequency when operating in the Speed control mode or is associated with the RR Input Point 1 Rate when operating in the Torque Control mode.
This value is entered as $0 \%$ to $100 \%$ of the $\mathbf{R R}$ input signal range.
See RR Input Point 1 Setting (F210) for more information on this setting when used for Speed control.
See RR Input Point 1 Rate (F214)for more information on this setting when used for Torque Control.

RR Input Point 2 Frequency
Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the gain and bias of the $\mathbf{R R}$ input terminal when the $\mathbf{R R}$ terminal is used as the control input while operating in the Speed Control mode.

This parameter sets RR Input Point 2 Frequency and is the frequency that is associated with the setting of RR Input Point 2 Setting when operating in the Speed Control mode.
See RR Input Point 1 Setting (F210) for more information on this setting.

## Direct Access Number - F212

## RR Input Point 1 Rate

Program $\Rightarrow$ Torque $\Rightarrow$ Setpoints
This parameter is used to set the gain and bias of the $\mathbf{R R}$ input terminal when the $\mathbf{R R}$ terminal is used as the control input while operating in the Torque Control mode

## RR Input Torque Control Setup

Perform the following setup to allow the system to receive Torque Control input at the $\mathbf{R R}$ input terminal:

- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Frequency Mode $\Rightarrow \mathbf{R R}$.
- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Command Mode Selection $\Rightarrow$ Terminal Block.

## Torque Control

Perform the following setup to allow the system to perform Torque Control from the $\mathbf{R R}$ input terminal:

- Set RR Input Point 1 Rate (F214)
- Set RR Input Point 1 Setting (F210) - the input analog signal level that corresponds to the torque setting at RR Input Point 1 Rate.
- Set RR Input Point 2 Rate (F215).
- Set RR Input Point 2 Setting (F212) — the input analog signal level that corresponds to the frequency setting at RR Input Point 2 Rate.
- Provide a Run command (F and/or R).

Torque Control is accomplished by establishing an associated $\mathbf{V} / \mathbf{f}$ output pattern for a given RR input level.

Once set, as the $\mathbf{R R}$ input voltage changes, the output torque of the ASD will vary in accordance with the above settings.

This parameter sets RR Input Point 1 Rate and is the output torque value that is associated with the setting of RR Input Point 1 Setting when operating in the Torque Control mode.

This value is entered as $0 \%$ to $250 \%$ of the rated torque.

## RR Input Point 2 Rate

Program $\Rightarrow$ Torque $\Rightarrow$ Setpoints
This parameter is used to set the gain and bias of the $\mathbf{R R}$ input terminal when the $\mathbf{R R}$ terminal is used as the control input while operating in the Torque Control mode.

Torque Control is accomplished by establishing an associated $\mathbf{V} / \mathbf{f}$ output pattern for a given $\mathbf{R R}$ input level.

This parameter sets RR Input Point 2 Rate and is the output torque value that is associated with the setting of RR Input Point 2 Setting when operating in the Torque Control mode.

This value is entered as $0 \%$ to $250 \%$ of the rated torque.
See RR Input Point 1 Rate (F214) for more information on this setting.

## RX Input Point 1 Setting

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints

This parameter is used to set the gain and bias of the $\mathbf{R X}$ input terminal when the $\mathbf{R X}$ terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.

This parameter sets the RX input level that is associated with RX Input Point 1 Frequency when operating in the Speed Control mode or is associated with the RX Input Point 1 Rate when operating in the Torque Control mode.

## RX Input Speed Control Setup

Perform the following setup to allow the system to receive Speed control input at the $\mathbf{R X}$ input terminal:

- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Frequency Mode $1 \Rightarrow \mathbf{R X}$.
- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Command Mode Selection $\Rightarrow$ Terminal Block.

## Speed Control

Perform the following setup to allow the system to perform Speed control from the $\mathbf{R X}$ input terminal:

- Set RX Input Point 1 Frequency (F217).
- Set RX Input Point 1 Setting (F216) - the input analog signal level that corresponds to the speed setting at RX Input Point 1 Frequency.
- Set RX Input Point 2 Frequency (F219).
- Set RX Input Point 2 Setting (F218) - the input analog signal level that corresponds to the speed setting at RX Input Point 2 Frequency.
- Provide a Run command ( F and/or R ).

Once set, as the RX input voltage changes, the ASD output speed and/or torque will vary in accordance with the above settings.
This parameter value is entered as $-100 \%$ to $+100 \%$ of the $\mathbf{R X}$ input signal range.
See parameter F474 and F475 for information on fine-tuning this terminal response.

## RX Input Point 1 Frequency

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints

This parameter is used to set the gain and bias of the $\mathbf{R X}$ input terminal when the $\mathbf{R X}$ terminal is used as the control input while operating in the Speed Control mode.

This parameter sets RX Input Point 1 Frequency and is the frequency that is associated with the setting of RX Input Point 1 Setting when operating in the Speed Control mode.
See RX Input Point 1 Setting (F216) for more information on this setting.

Direct Access Number - F216

## RX Input Point 2 Setting

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the gain and bias of the $\mathbf{R X}$ input terminal when the $\mathbf{R X}$ terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.

This parameter sets the RX input level that is associated with RX Input Point 2
Frequency when operating in the Speed control mode or is associated with the
RX Input Point 2 Rate when operating in the Torque Control mode.
This value is entered as $-100 \%$ to $+100 \%$ of the $\mathbf{R X}$ input signal range.
See RX Input Point 1 Setting (F216) for more information on this setting when used for Speed control.

See RX Input Point 1 Rate (F220) for more information on this setting when used for Torque Control

## RX Input Point 2 Frequency

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the gain and bias of the $\mathbf{R X}$ input terminal when the $\mathbf{R X}$ terminal is used as the control input while operating in the Speed Control mode.

This parameter sets RX Input Point $\mathbf{2}$ Frequency and is the frequency that is associated with the setting of RX Input Point 2 Setting when operating in the Speed Control mode
See RX Input Point 1 Setting (F216) for more information on this setting.

Direct Access Number - F218
Parameter Type - Numerical
Factory Default - +100
Changeable During Run - Yes
Minimum - - 100.0
Maximum - +100.0
Units - \%

Direct Access Number - F219
Parameter Type - Numerical
Factory Default - $\mathbf{6 0 . 0 0}$
Changeable During Run - Yes
Minimum - 0.00
Maximum - Max. Freq. (F011)
Units - Hz

## RX Input Point 1 Rate

Program $\Rightarrow$ Torque $\Rightarrow$ Setpoints
This parameter is used to set the gain and bias of the $\mathbf{R X}$ input terminal when the $\mathbf{R X}$ terminal is used as the control input while operating in the Torque Control mode.

## RX Input Torque Control Setup

Perform the following setup to allow the system to receive Torque Control input at the $\mathbf{R X}$ input terminal:

- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Frequency Mode $\Rightarrow \mathbf{R X}$.
- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Command Mode Selection $\Rightarrow$ Terminal Block.

## Torque Control

Perform the following setup to allow the system to perform Torque Control from the $\mathbf{R X}$ input terminal:

- Set RX Input Point 1 Rate (F220)
- Set RX Input Point 1 Setting (F216) - the input analog signal level that corresponds to the torque setting at RX Input Point 1 Rate.
- Set RX Input Point 2 Rate (F221).
- Set RX Input Point 2 Setting (F218) - the input analog signal level that corresponds to the speed setting at RX Input Point 2 Rate
- Provide a Run command ( F and/or R).

Torque Control is accomplished by establishing an associated $\mathbf{V} / \mathbf{f}$ output pattern for a given $\mathbf{R X}$ input level.

Once set, as the $\mathbf{R X}$ input voltage changes, the ASD output speed and/or torque will vary in accordance with the above settings.

This parameter sets RX Input Point 1 Rate and is the output torque value that is associated with the setting of RX Input Point 1 Setting when operating in the Torque Control mode.
This value is entered as $-250 \%$ to $+250 \%$ of the rated torque

## RX Input Point 2 Rate

Program $\Rightarrow$ Torque $\Rightarrow$ Setpoints
This parameter is used to set the gain and bias of the RX input terminal when the $\mathbf{R X}$ terminal is used as the control input while operating in the Torque Control mode.

Torque Control is accomplished by establishing an associated $\mathbf{V} / \mathbf{f}$ output pattern for a given $\mathbf{R X}$ input level.

This parameter sets RX Input Point 2 Rate and is the output torque value that is associated with the setting of RX Input Point 2 Setting when operating in the Torque Control mode.

This value is entered as $-250 \%$ to $+250 \%$ of the rated torque
See RX Input Point 1 Rate (F220) for more information on this setting.

## RX2 (Al1) Input Point 1 Setting

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the gain and bias of the $\mathbf{R X 2}$ (AI1) input terminal when the RX2 (AI1) terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.

Note: The Expansion IO Card Option 1 option board (P/N ETB003Z) is required to use this terminal.

This parameter sets the RX2 (AI1) input level that is associated with RX2 (AI1) Input Point 1 Frequency when operating in the Speed Control mode or is associated with the RX2 (AI1) Input Point 1 Rate when operating in the Torque Control mode.

## RX2 (Al1) Input Speed Control Setup

Perform the following setup to allow the system to receive Speed control input at the RX2 (AI1) input terminal:

- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Frequency Mode $1 \Rightarrow \mathbf{R X 2}$.
- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Command Mode Selection $\Rightarrow$ Terminal Block

## Speed Control

Perform the following setup to allow the system to perform Speed control from the RX2 (AI1) input terminal:

- Set RX2 (AI1) Input Point 1 Frequency (F223).
- Set RX2 (AI1) Input Point 1 Setting (F222) - the input analog signal level that corresponds to the speed setting at RX2 (AI1) Input Point 1 Frequency.
- Set RX2 (AI1) Input Point 2 Frequency (F225).
- Set RX2 (AI1) Input Point 2 Setting (F224) - the input analog signal level that corresponds to the speed setting at RX Input Point 2 Frequency.
- Provide a Run command (F and/or R).

Once set, as the RX2 (AI1) input voltage changes, the ASD output speed and/or torque will vary in accordance with the above settings.

This parameter value is entered as $-100 \%$ to $+100 \%$ of the $\mathbf{R X 2}$ (AI1) input signal range.

See the Expansion IO Card Option 1 Instruction Manual (P/N 58685) for more information on the function of this terminal. See parameter F476 and F477 for information on fine-tuning this terminal response

```

Frequency Settings

## RX2 (Al1) Input Point 1 Frequency

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the gain and bias of the $\mathbf{R X 2}$ (AI1) input terminal when the RX2 (AI1) terminal is used as the control input while operating in the Speed Control mode.

This parameter sets RX2 (AI1) Input Point 1 Frequency and is the frequency that is associated with the setting of RX2 (AI1) Input Point 1 Setting when operating in the Speed Control mode.
See RX2 (AI1) Input Point 1 Setting (F222) for more information on this setting.

## RX2 (AI1) Input Point 2 Setting

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints

This parameter is used to set the gain and bias of the RX2 (AI1) input terminal when the RX2 (AI1) terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.

This parameter sets the RX2 (AI1) input level that is associated with RX2 (AI1) Input Point 2 Frequency when operating in the Speed control mode or is associated with the RX2 (AI1) Input Point 2 Rate when operating in the Torque Control mode.

This value is entered as $-100 \%$ to $+100 \%$ of the RX2 (AI1) input signal range.
See RX2 (AI1) Input Point 1 Setting (F222) for more information on this setting when used for Speed control.

See RX2 (AI1) Input Point 1 Rate (F226) for more information on this setting when used for Torque Control.

## RX2 (Al1) Input Point 2 Frequency <br> Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints

This parameter is used to set the gain and bias of the RX2 (AI1) input terminal when the RX2 (AI1) terminal is used as the control input while operating in the Speed Control mode.

This parameter sets RX2 (AI1) Input Point 2 Frequency and is the frequency that is associated with the setting of RX2 (AI1) Input Point 2 Setting when operating in the Speed Control mode.

See RX2 (AI1) Input Point 1 Setting (F226) for more information on this setting.

## RX2 (Al1) Input Point 1 Rate

Program $\Rightarrow$ Torque $\Rightarrow$ Setpoints

This parameter is used to set the gain and bias of the RX2 (AI1) input terminal when the RX2 (AI1) terminal is used as the control input while operating in the Torque Control mode.

Note: $\quad$ The Expansion IO Card Option 1 option board (P/N ETB003Z) is required to use this terminal.

## RX2 (AI1) Input Torque Control Setup

Perform the following setup to allow the system to receive Torque Control input at the RX2 (AI1) input terminal:

- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Frequency Mode $\Rightarrow$ RX2.
- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Command Mode Selection $\Rightarrow$ Terminal Block.
- Provide a Run command ( $\mathbf{F}$ and/or $\mathbf{R}$ ).

## Torque Control

Perform the following setup to allow the system to perform Torque Control from the RX2 (AI1) input terminal:

- Set RX2 (AI1) Input Point 1 Rate (F226)
- Set RX2 (AI1) Input Point 1 Setting (F222) - the input analog signal level that corresponds to the speed setting at RX2 (AI1) Input Point 1 Rate.
- Set RX2 (AI1) Input Point 2 Rate (F227).
- Set RX2 (AI1) Input Point 2 Setting (F224) - the input analog signal level that corresponds to the speed setting at RX Input Point 2 Rate.
- Provide a Run command (F and/or R).

Torque Control is accomplished by establishing an associated $\mathbf{V} / \mathbf{f}$ output pattern for a given RX2 (AI1) input level.

Once set, as the RX2 (AI1) input voltage changes, the ASD output speed and/or torque will vary in accordance with the above settings.

This parameter sets RX2 (AI1) Input Point 1 Rate and is the output torque value that is associated with the setting of RX2 (AI1) Input Point 1 Setting when operating in the Torque Control mode.

This value is entered as $-250 \%$ to $+250 \%$ of the rated torque.

See the Expansion IO Card Option 1 Instruction Manual (P/N 58685) for more information on the function of this terminal

## BIN Input Point 1 Setting

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the gain and bias of the BIN input terminals when the BIN terminals are used as the control input while operating in the Speed Control mode.

The discrete input terminals of the Terminal Board are used as the BIN terminals.

## BIN Input Speed Control Setup

Perform the following setup to allow the system to receive Speed control input at the BIN input terminals:

- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Frequency Mode $1 \Rightarrow$ Binary/BCD
- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Command Mode Selection $\Rightarrow$ Terminal Block
- Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals; select and set the desired discrete input terminals to Binary Bit(s) $\mathbf{0} \mathbf{- 7}$ (or $0-\mathrm{MSB}$ ). The binary input byte will control the speed of the motor.
- Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals; select and set a discrete input terminal to Binary Data Write. Activation of the Binary Data Write terminal will transfer the status of the Binary $\operatorname{Bit}(\mathrm{s}) \mathbf{0} \mathbf{- 7}$ (or $0-\mathrm{MSB}$ ) to the control board for speed control.

## Speed Control

Perform the following setup to allow the system to perform Speed control from the BIN input terminals:

- Set BIN Input Point 1 Frequency (F229).
- Set the BIN input value (\% of $255_{\text {D }}$ ) (F228) that represents BIN Input Point 1 Frequency.
- Set BIN Input Point 2 Frequency (F231)
- Set the BIN input value (\% of 255 ) (F230) that represents BIN Input Point 2 Frequency.
- Provide a Run command (F and/or R).

## Note: $\quad 255_{D}$ is the decimal equivalent of the 8 -bit BIN byte with all input terminals set to $1(255$ decimal $=11111111$ binary $)$.

Once set, as the BIN input signal changes are transferred to the control board, the output frequency of the ASD will vary in accordance with the above settings.

This parameter sets BIN Input Point 1 Setting and is entered as $0 \%$ to $100 \%$ of the of the range represented by the BIN binary input byte 11111111 ( $255_{\mathrm{D}}$ ) or the binary bit(s) $0-$ MSB.

```

Frequency Settings

## BIN Input Point 1 Frequency

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the speed of the BIN input terminals when the BIN terminals are used as the control input.

This parameter sets BIN Input Point 1 Frequency and is the frequency that is associated with the setting of BIN Input Point 1 Setting.

See BIN Input Point 1 Setting (F228) for further information on this setting.
BIN Input Point 2 Setting
Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the speed of the BIN input terminals when the BIN terminals are used as the control input.

This parameter sets the BIN input signal that is associated with BIN Input Point 2 Frequency.

This value is entered as $0 \%$ to $+100 \%$ of the BIN input signal range.
See BIN Input Point 1 Setting (F228) for further information on this setting.

BIN Input Point 2 Frequency
Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the speed of the BIN input terminals when the BIN terminal are used as the control input.
This parameter sets BIN Input Point 2 Frequency and is the frequency that is associated with the setting of BIN Input Point 2 Setting.
See BIN Input Point 1 Setting (F228) for further information on this setting.

## PG Input Point 1 Setting

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the gain and bias of the PG input terminal of the option board when a shaft-mounted encoder is used as the control input while operating in the Speed Control mode.

Note: $\quad$ See PG Option Board Instruction Manual P/N 58687 for more information.

## PG Input Speed Control Setup

Perform the following setup to allow the system to receive Speed control input at the PG input terminal:

- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Frequency Mode $1 \Rightarrow$ Pulse Input (option)
- Program $\Rightarrow$ Fundamental $\Rightarrow$ Standard Mode Selection $\Rightarrow$ Command Mode Selection $\Rightarrow$ (any setting)
- Provide a Run command ( $\mathbf{F}$ and/or $\mathbf{R}$ ).

## Speed Control

Perform the following setup to allow the system to perform Speed control from the PG input terminals:

- Set PG Point 1 Frequency (F235).
- Set the PG input value (F234) that represents PG Point 1 Frequency.
- Set PG Point 2 Frequency (F237).
- Set the PG input value (F236) that represents PG Point 2 Frequency.

Once set, as the PG input pulse count rate changes, the output frequency of the drive will vary in accordance with the above settings.

This parameter sets the PG input pulse count that represents Reference Setpoint 1 (frequency). The range of values for this parameter is $0 \%$ to $100 \%$ of the PG input pulse count range.

Note: Further application-specific PG settings may be performed from the following path: Program $\Rightarrow$ Feedback $\Rightarrow \boldsymbol{P G}$ Settings.

PG Input Point 1 Frequency
Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the speed of the $\mathbf{P G}$ input terminals when the $\mathbf{P G}$ terminal is used as the control input.

This parameter sets PG Point 1 Frequency and is the frequency that is associated with the setting of PG Point 1 Setting.
See PG Point 1 Setting (F234) for further information on this setting.

Direct Access Number - F234

## PG Input Point 2 Setting

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the direction and speed of the PG input terminals when the PG terminals are used as the control input.

This parameter sets the PG input signal that is associated with PG Point 2 Frequency.

This value is entered as $0 \%$ to $100 \%$ of the $\mathbf{P G}$ input signal range.
See PG Point 1 Setting (F234) for further information on this setting.

## PG Input Point 2 Frequency

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to set the direction and speed of the PG input terminals when the PG terminal are used as the control input.
This parameter sets PG Point 2 Frequency and is the frequency that is associated with the setting of PG Point 2 Setting.
See PG Point 1 Setting (F234) for further information on this setting.

## Start Frequency

Program $\Rightarrow$ Special $\Rightarrow$ Frequency Control
The output of the drive will remain at 0.0 Hz until the programmed speed value exceeds this setting during startup. Once exceeded during startup, the output frequency of the drive will accelerate to the programmed setting.

Output frequencies below the Start Frequency will not be output from the drive during startup. However, once reaching the Start Frequency, speed values below the Start Frequency may be output from the drive.
If the setting of this parameter results in an over-current condition at startup, reduce the setting of this parameter to a value less than the rated slippage of the motor.

If zero-speed torque is required, set this parameter and F243 to 0.0 Hz .
This setting will override the setting of F244 if this setting has a higher value.
This parameter setting is used during a Jog as the Lower-Limit Frequency (see F260).

## Run Frequency

Program $\Rightarrow$ Special $\Rightarrow$ Frequency Control
This parameter establishes a center frequency (Run Frequency) of a frequency band.
Parameter F242 provides a plus-or-minus value for the Run Frequency; thus, establishing a frequency band.
During acceleration, the drive will not output a signal to the motor until the lower level of the band is reached.

During deceleration, the drive will continue to output the programmed deceleration signal to the motor until the lower level of the band is reached; at which time the output will go to 0.0 Hz .

Direct Access Number - F236

Run Frequency Hysteresis
Program $\Rightarrow$ Special $\Rightarrow$ Frequency Control
This parameter provides a plus-or-minus value for the Run Frequency (F241)
setting. setting.

## End Frequency

Program $\Rightarrow$ Special $\Rightarrow$ Frequency Control
This parameter sets the lowest frequency that the drive will recognize during deceleration before the drive goes to 0.00 Hz .

## 0 Hz Dead Band Signal

Program $\Rightarrow$ Special $\Rightarrow$ Special Parameters
This parameter sets an output frequency threshold that, until the commanded frequency surpasses this setting, the ASD will output 0.00 Hz to the motor.

This setting will override the Start Frequency (F240) setting if this setting has a higher value.

## DC Injection Braking Start Frequency

Program $\Rightarrow$ Protection $\Rightarrow$ DC Braking
During deceleration this is the frequency at which DC Injection Braking will start.

## DC Injection Braking

DC Injection Braking is a braking system used with 3-phase motors. Unlike conventional brakes, there is no physical contact between the rotating shaft and a stationary brake pad or drum. When braking is required, the drive outputs a DC current that is applied to the windings of the motor to quickly brake the motor. The braking current stops when the time entered in F252 times out.

The intensity of the DC current used while braking determines how fast the motor will come to a stop and may be set at F251. The intensity setting is entered as a percentage of the full load current of the ASD.
DC Injection Braking is also used to preheat the motor or to keep the rotor from spinning freely when the motor is off by providing a pulsating DC current into the motor at the Carrier Frequency. This feature may be enabled at F254.

## DC Injection Braking Current

Program $\Rightarrow$ Protection $\Rightarrow$ DC Braking
This parameter sets the percentage of the rated current of the drive that will be used for DC Injection Braking. A larger load will require a higher setting.

## Forward/Reverse DC Injection Braking Priority

Program $\Rightarrow$ Protection $\Rightarrow$ DC Braking

This parameter setting determines if DC Injection Braking is to be used during a change in the direction of the motor.

Direct Access Number - F253
Parameter Type - Selection List
Factory Default - Disabled
Changeable During Run - Yes

Settings:
0 — Disabled
1 - Enabled

## Motor Shaft Fixing Control

Program $\Rightarrow$ Protection $\Rightarrow$ DC Braking

This parameter Enables/Disables a continuous DC injection at half of the amperage setting of F251 into a stopped motor. This feature is useful in preheating the motor or to keep the rotor from spinning freely.

Motor Shaft Stationary Control starts after the DC injection brake stops the motor and continues until ST - CC is opened, power is turned off, an Emergency Off command is received, or this parameter is changed.

Enabling this feature will also require a non-zero entry at F250.
Settings:
0 - Disabled
1 - Enabled

## 0 Hz Command Output

Program $\Rightarrow$ Special $\Rightarrow$ Special Parameters
This parameter is used to set the go-to-zero method to be used by the ASD in the event that the ASD is commanded to go to 0 Hz .

Settings:
0 - Standard (DC Injection Braking)
$1-0 \mathrm{~Hz}$ Command

## Time Limit For Lower-Limit Frequency Operation

Program $\Rightarrow$ Fundamental $\Rightarrow$ Frequency Settings
This parameter sets the time that the ASD is allowed to operate below the Lower-Limit setting before an alarm and subsequent fault is incurred.

Direct Access Number - F255

## Jog Frequency <br> Program $\Rightarrow$ Frequency $\Rightarrow$ Jog Settings

This parameter sets the output frequency of the drive during a Jog. Jog is the term used to describe turning the motor on for small increments of time and is used when precise positioning of motor-driven equipment is required.

The Jog function may be initiated from the EOI, remotely via the Terminal Board, or using Communications (for more information on using Communications for Jogging, see the Communications Manual P/N 53840).
The $\mathbf{J o g}$ function can be activated from zero Hz or from any frequency below the Jog Run Frequency (Jog can only increase the speed). A Jog command will not be recognized when the running frequency is above the Jog Run Frequency setting. The Jog command has priority over other Run commands and is not limited by the Upper-Limit setting of parameter F012.

Jog commands received while running for the opposite direction will follow the programmed stopping method of F261 until reaching zero Hz and will then ramp to the programmed Jog Frequency and direction.

## Jog Setup and Execution

To initiate a Jog Run from the EOI perform the following:

1. Enable the Jog function at F262.
2. Set the Command Mode Selection (F003) to EOI Keypad.
3. Assign the Jog Run setting to a discrete input terminal (see Table 5 on pg. 234).

Note: Any unused discrete input terminal may be used for the Jog Run setting.
4. Set up a Jog Run Frequency at F260.
5. Set up a Jog Stop Pattern at F261.
6. Set the Input Terminal Priority (F106) function to Disable to receive Jog commands from the EOI
7. Set the Local/Remote key to Local.
8. Activate the Jog Run terminal (from step 3) and provide a Run command (F or R).

Note: Simultaneous $\boldsymbol{F}$ and $\boldsymbol{R}$ activations will perform as setup at parameter F105.
9. Press the Run key and the ASD will output the frequency setting of F260 for the duration of the activation.

To initiate a Jog Run from the Terminal Board perform the following:

1. Using the setup above, set the Input Terminal Priority (F106) function (from step 6) to Enable to receive Jog commands from the Terminal Board using the Jog Run terminal without regard to the Local/Remote setting.
2. Use the Jog Run terminal of step 3 above to activate the Jog function.

## Jog Stop Pattern

Program $\Rightarrow$ Frequency $\Rightarrow$ Jog Settings

This parameter sets the stopping method used while operating in the Jog mode.
Note: This parameter setting is used for the Jog operation only. The Emergency Off stopping method setting of parameter F603 has priority over this setting and changes made here do not affect the function or setting of parameter F603.

## Settings:

0 - Deceleration Stop
1 - Coast Stop
2 - DC Injection Braking Stop

## Panel Operation Jog Mode

Program $\Rightarrow$ Frequency $\Rightarrow$ Jog Settings
This parameter enables the Jog command to be received from the EOI. When disabled the $\mathbf{J o g}$ command received from the EOI is ignored.

Jog commands may also be received from the Terminal Board. Priority as to which is allowed to override the other is selected at F106.

The priority selection at F106 enables the selected source for Jog control and disables the other. The F106 setting overrides this parameter setting.

## Direct Access Number - F262

Parameter Type - Selection List
Factory Default - Disabled
Changeable During Run - Yes

## UP/DOWN Frequency (up) Response Time <br> No Path — Direct Access Only

This parameter functions in conjunction with the parameter settings of F265, F266, F267, F268, and F269. The purpose of these settings is to setup the ASD to allow an externally-supplied discrete input signal to control the output frequency of the ASD.

This method uses the discrete input terminal settings UP/DOWN Frequency (up) and UP/DOWN Frequency (down) to change the ASD speed. Activation of either terminal increases or decreases the output frequency at the Accel 1 or Decel 1 rates, respectively.

Depending on the Delay setting, the UP/DOWN Frequency (up/down) terminal may perform 1) the increase/decrease function for the duration of activation or 2) the UP/DOWN Frequency (up/down) terminal may act as a momentary contact that loads a new commanded frequency upon activation.

In either case, to activate-and-hold will continue the up or down function until reaching the Upper-Limit Frequency or the Lower-Limit Frequency, respectively. At which point further activation will be ignored.

See Figure 29 on pg. 130 for more information on the UP/DOWN Frequency function.

## Setup Requirements

F003 - Selects the Command control source; set to Terminal Block.
F004 - Selects the Frequency Control Mode 1 control source; set to UP/DOWN Frequency.

F207 - Selects the Frequency Control Mode 2 control source; set to UP/DOWN Frequency if used.

Set one unused discrete input terminal to UP/DOWN Frequency (up) and one unused discrete input terminal to UP/DOWN Frequency (down).

F264 - Sets the system-response delay to the initial activation of the discrete input terminal UP/DOWN Frequency (up). Also sets the response delay of subsequent terminal activations of the UP/DOWN Frequency (up) terminal during an activate-and-hold.

F265 - Sets the frequency increase amount for each activation of the UP/ DOWN Frequency (up) terminal activation. The rate of the frequency increase is set at Acceleration Time 1 (F009).

F266 - Sets the system-response delay to the initial activation of the discrete input terminal UP/DOWN Frequency (down). Also sets the activation delay of subsequent terminal activations of the UP/DOWN Frequency (down) terminal during an activate-and-hold.

F267 - Sets the frequency decrease amount for each activation of the UP/ DOWN Frequency (down) terminal activation. The rate of the frequency decrease is set at Deceleration Time 1 (F010).

F268 - At power up or after a reset, this parameter setting is used to provide a starting frequency for the UP/DOWN Frequency function.

F269 - At power down while running, and when enabled, this parameter writes the running frequency into the F268 location and, upon a system restart, uses this setting as the startup frequency.

Provide a Run command (F or R). The motor will run at the F268 setting.

## UP/DOWN Frequency (down) Frequency Step

No Path — Direct Access Only
This parameter sets the frequency decrease amount for each activation of the UP/DOWN Frequency (down) terminal activation. The rate of the frequency decrease is set at Deceleration Time 1 (F010).

See F264 for more information on this parameter.

## Initial UP/DOWN Frequency <br> No Path — Direct Access Only

At power up or after a reset, this parameter setting is used to provide a starting frequency for the UP/DOWN Frequency function.

See F269 for more information on this parameter setting.

Initial UP/DOWN Frequency Rewriting
No Path — Direct Access Only

At power down, and when enabled, this parameter writes the running frequency into the F268 location and, upon a system restart, uses this setting as the startup frequency.
Disable this parameter and set parameter F268 to the desired startup frequency if the same starting frequency is required at each startup.

Note: This parameter setting may be different at each startup when enabled.

## Jump Frequency 1

Program $\Rightarrow$ Special $\Rightarrow$ Jump Frequencies
In conjunction with parameter F271, this parameter establishes a user-defined frequency range: the Jump Frequency and a plus-or-minus value.

During acceleration, the output frequency of the drive will hold at the lower level of the Jump Frequency range until the programmed acceleration ramp reaches the upper level of the Jump Frequency range. At which time the output frequency of the drive will accelerate to the upper level of the Jump Frequency range and continue upward as programmed.

During deceleration, the output frequency of the drive will hold at the upper level of the Jump Frequency range until the programmed deceleration ramp reaches the lower level of the Jump Frequency range. At which time the output frequency of the drive will decelerate to the lower level of the Jump Frequency range and continue downward as programmed.

Once set up and enabled, it is on in all control modes.
User-selected frequencies may be jumped to avoid the negative effects of mechanical resonance.

Preset Speed 15
Program $\Rightarrow$ Frequency $\Rightarrow$ Preset Speeds
This parameter assigns an output frequency to binary number 1111 and is
identified as Preset Speed 15. The binary number is applied to S1 $-\mathbf{S 4}$ of the
Terminal Board to output the Preset Speed (see F018 for more information on
this parameter).

## PWM Carrier Frequency

Program $\Rightarrow$ Special $\Rightarrow$ Carrier Frequency
This parameter sets the frequency of the pulse width modulation signal applied to the motor.

Note: $\quad$ When operating in the Vector Control mode the carrier frequency should be set to 2.2 kHz or above.

Note: If the PWM carrier frequency is set at 2.0 kHz or above, it cannot be decreased below 2.0 kHz while running. If the PWM carrier frequency is set at 1.9 kHz or below, it cannot be increased above 2.0 kHz while running. Either change requires that the ASD be stopped and restarted for the changes to take effect.

## Auto Restart Selection

Program $\Rightarrow$ Protection $\Rightarrow$ Retry/Restart
This parameter Enables/Disables the ability of the drive to start into a spinning motor when the ST - CC connection opens momentarily and is then closed (Break/Make ST) or after a power interruption (momentary power failure).

## Settings:

0 - Off
1 - Enabled (At Power Failure)
2 - Enabled (At Make-Break ST-CC)
3 - Enabled (At Make-Break ST-CC or Power Failure)
4 - Enabled (At Run)

## Regenerative Power Ridethrough Mode <br> Program $\Rightarrow$ Protection $\Rightarrow$ Under-Voltage/Ridethrough <br> This parameter determines the motor-control response of the drive in the event of a momentary power outage or under-voltage condition. <br> During a Ridethrough, regenerative energy is used to maintain the control circuitry settings for the duration of the Ridethrough; it is not used to drive the motor. The motor(s) of the system are stopped and then restarted automatically if so configured. <br> In a multiple-motor application, there will be a requirement to synchronize the stopping and restarting of the motors as not to cause breakage in the product being processed by the motors stopping/starting at different times (e.g., wire spools, bobbin winder for textile machines, etc.). Parameters F317 and F318 must be setup to synchronize motor operation as to avoid breakage in these types of applications. <br> Note: If used to restart the motors, the Retry setup of F301 is required. <br> Note: $\quad$ The Jog function will not operate while in the Synchronized Decel/Accel mode.

## Settings:

0 - Off
1 - Ridethrough On
2 - Decel Stop
3 - Synchronized ACC/DEC (TB)
4 - Synchronized ACC/DEC (TB + Power Off)

## Ridethrough Setup Requirements

1. Select the Ridethrough Mode at F302.
2. Select the Ridethrough Time at F310.
3. Select the Synchronized Stop/Start Times at F317/F318 (if required).

## Note: $\quad$ F317 and F318 are not functional while operating in the Torque or Position control modes, or for the Jog Run function (F260).

4. Set a discrete input terminal to Power Failure Synchronized Signal and activate the terminal to enable the Synchronized Accel/Decel function.
5. Select the Ridethrough Control Level at F629.

Direct Access Number - F302<br>Parameter Type - Selection List<br>Factory Default - Off<br>Changeable During Run - Yes

## Retry Selection

Program $\Rightarrow$ Protection $\Rightarrow$ Retry/Restart
After a trip has occurred, this parameter sets the number of times that an automatic system restart is attempted for a qualified trip.

The trip conditions listed below will not initiate the automatic Retry/Restart function:

- Input Phase Loss (Input Phase Failure)
- Output Phase Loss (Output Phase Failure)
- Output Current Protection Fault
- Output Current Detector error
- Load Side Over-Current at Start
- Earth Fault (Ground Fault)
- Over-Current During Acceleration
- Arm Over-Current at start-up
- DBR Resistor Over-Current
- Low-Current
- Voltage Drop In Main Circuit
- EEPROM Data Fault (EEPROM Fault)
- Flash Memory/Gate Array/RAM-ROM Fault
- CPU Fault
- Emergency Off (EMG)
- Communication Error
- Option Fault
- Sink/Source Setting Error
- Over-Speed Error
- Over-Torque
- Key Error
- External Thermal Error
- Externally-Controlled Interrupt

See the section titled System Setup Requirements on pg. 8 for more information on this setting.

Direct Access Number - F303
Parameter Type - Numerical
Factory Default - $\mathbf{0 0}$
Changeable During Run - Yes
Minimum - 00
Maximum - 10

## Dynamic Braking

Program $\Rightarrow$ Protection $\Rightarrow$ Dynamic Braking
This parameter Enables/Disables the Dynamic Braking system.
Settings:
0 - Off
1 - On with Overload Detection
2 - On without Overload Detection
Dynamic Braking uses the transistor IGBT7 to dissipate the bus voltage when required.
IGBT7 is a standard item on the 25 HP and below G9 ASD 230 -volt systems and is standard on the 400 HP and below for the for the 460 -volt systems. IGBT7 is optional for all remaining systems.

## Dynamic Braking

Dynamic Braking is used to prevent over-voltage faults during rapid deceleration or constant speed run on cyclic overhauling applications. Dynamic Braking dissipates regenerated energy in the form of heat. When using a DBR use thermal protection.
The resistive load is connected across terminals PA and PB (non-polarized). Using a low-value, high-wattage resistance as a load for the generated current, the resistive load dissipates the induced energy.

Dynamic Braking helps to slow the load quickly; it cannot act as a holding brake.

The Dynamic Braking function may be setup and enabled by connecting a braking resistor from terminal $\mathbf{P A}$ to $\mathbf{P B}$ of the drive and providing the proper information at F304, F308, and F309.
See the section titled Dynamic Braking Resistor Wire/Cable Specifications on pg. 267 for more information on using the DBR system and for assistance in selecting the appropriate resistor for a given application.

## Over-Voltage Limit Operation <br> Program $\Rightarrow$ Protection $\Rightarrow$ Stall

This parameter enables the Over-Voltage Limit function. This feature is used to set the upper DC bus voltage threshold that, once exceeded, will cause an Over-Voltage Stall.

An Over-Voltage Stall increases the output frequency of the drive during deceleration for a specified time in an attempt to prevent an Over-Voltage Trip.
If the over-voltage threshold level setting of parameter F626 is exceeded for over 4 mS , an Over-Voltage Trip will be incurred.

Note: This parameter setting may increase deceleration times.

## Settings:

0 - Enabled (Over-Voltage Stall)
1 - Disabled
2 - Enabled (Forced Shorted Deceleration)
3 - Enabled (Forced Dynamic Braking Deceleration)

Parameter Type - Selection List
Factory Default - (ASD-Dependent)
Changeable During Run - Yes

## Supply Voltage Correction

Program $\Rightarrow$ Protection $\Rightarrow$ Base Frequency Voltage
This parameter Enables/Disables the Voltage Compensation function.
When Enabled, this function provides a constant V/f ratio during periods of input voltage fluctuations.

## Settings:

0 - Disabled (Output Voltage Unlimited)
1 - Enabled (Supply Voltage Compensation)
2 - Disabled (Output Voltage Limited)
3 - Enabled (Supply Voltage Compensation w/Output Voltage Limited)

## Dynamic Braking Resistance

Program $\Rightarrow$ Protection $\Rightarrow$ Dynamic Braking
This parameter is used to input the resistive value of the Dynamic Braking Resistor being used.
Light-duty and heavy-duty resistors vary from a few ohms to several hundred ohms. The appropriate resistance size will be typeform- and applicationspecific.
See the section titled Dynamic Braking Resistor Wire/Cable Specifications on pg. 267 for more information on using the DBR system and for assistance in selecting the appropriate resistor for a given application.

Note: Using a resistor value that is too low may result in system damage.

## Continuous Dynamic Braking Capacity

Program $\Rightarrow$ Protection $\Rightarrow$ Dynamic Braking
This parameter is used to input the wattage of the Dynamic Braking Resistor.
See the section titled Dynamic Braking Resistor Wire/Cable Specifications on pg. 267 for more information on using the DBR system.

Note: Using a resistor with a wattage rating that is too low may result in system damage.

## Ridethrough Time

Program $\Rightarrow$ Protection $\Rightarrow$ Retry/Restart
In the event of a momentary power outage, this parameter determines the length of the Ridethrough time.

The Ridethrough will be maintained for the number of seconds set using this parameter.

See parameter F302 for more information on the Ridethrough function.
Note: The actual Ridethrough Time is load-dependent.

## Forward Run/Reverse Run Disable

Program $\Rightarrow$ Frequency $\Rightarrow$ Forward/Reverse Disable
This parameter Enables/Disables the Forward Run or Reverse Run mode.
If either direction is disabled, commands received for the disabled direction will not be recognized.
If both directions are disabled, the received direction command will determine the direction of the motor rotation.

Settings:
0 - Off
1 - Disable Reverse Run
2 - Disable Forward Run

## Random Mode

Program $\Rightarrow$ Protection $\Rightarrow$ Retry/Restart
This parameter adjusts the carrier frequency randomly. This feature is effective in minimizing the negative effects of mechanical resonance.

Settings:

$$
0 \text { - Disabled }
$$

1 - Enabled

## Carrier Frequency Control Mode

Program $\Rightarrow$ Special $\Rightarrow$ Carrier Frequency
This parameter provides for the automatic decrease of the carrier frequency.
Select $\mathbf{1}$ to decrease the Carrier Frequency setting as a function of an increased current requirement.
Selection $\mathbf{2}$ or $\mathbf{3}$ may also include an output voltage drop as a function of an increased current requirement. The Carrier Frequency should be set below 4 kHz .

Settings:

$$
0 \text { - No Decrease and No Limit }
$$

1 - Valid Decrease and No Limit
2 - No Decrease and Limit Small Pulse
4 - Valid Decrease and Limit Small Pulse

## Synchronized Deceleration Time

No Path — Direct Access Only
In the event that the Ridethrough function activates in a multiple-motor application it will be necessary to manage the stopping motors synchronously as not to damage the product being processed (e.g., wire spools, bobbin winder for textile machines, etc.).

This parameter is used to minimize the product breakage during a momentary power outage. This function stops multiple machines simultaneously or makes them reach their respective command frequencies simultaneously by regulating their deceleration times.

See parameter F302 for more information on this setting.

## Synchronized Acceleration Time

No Path — Direct Access Only
In the event that the Ridethrough function activates in a multiple-motor application it will be necessary to manage the accelerating motors synchronously as not to damage the product being processed (e.g., wire spools, bobbin winder for textile machines, etc.).
This parameter is used to minimize the product breakage during a momentary power outage. This function orchestrates the acceleration of multiple machines simultaneously or makes them reach their respective command frequencies simultaneously by regulating their acceleration times.
See parameter F302 for more information on this setting.

## Drooping Gain

Program $\Rightarrow$ Feedback $\Rightarrow$ Drooping Control
This parameter sets the effective $100 \%$ output torque level while operating in the Drooping Control mode. This value is the upper torque limit of the motor being driven by a given ASD while operating in the Drooping Control mode.

Note: The maximum frequency output is not limited by the setting of F011 while operating in the Drooping Control mode.

## Drooping Insensitive Torque <br> Program $\Rightarrow$ Feedback $\Rightarrow$ Drooping Control <br> This parameter defines a torque range in which the Drooping Control settings will be ignored and the programmed torque settings will be followed.

## Drooping Output Filter

Program $\Rightarrow$ Feedback $\Rightarrow$ Drooping Control

This parameter is used to set the rate of output change allowed when operating in the Drooping Control mode.

Jerky operation may be reduced by increasing this setting.

## Light-Load High-Speed Operation

Program $\Rightarrow$ Special $\Rightarrow$ Crane/Hoist Settings
This parameter enables the Light-Load High-Speed function by selecting an operating mode. The Light-Load High-Speed function accelerates the output frequency of the ASD from the programmed speed to the setting established in F330.

This parameter may be disabled.
Enabling the Light-Load High-Speed function requires that an operating mode be selected here, and that the criteria of parameters F331-F333 be met.

Settings:

> 0 - Off
> 1 - Auto Speed (F-Motor: Up, R-Generator:Down)
> 2 - Auto Speed (F-Generator: Down, R-Motor:Up)
> 3 - F330 Setting (F-Motor: Up, R-Generator:Down)
> 4- F330 Setting (F-Generator: Down, R-Motor:Up)

## Light-Load High-Speed Learning Function

Program $\Rightarrow$ Special $\Rightarrow$ Crane/Hoist Settings
The Light-Load High-Speed function accelerates the output frequency of the ASD from the programmed speed to the setting established in F330 and is primarily used with Crane/Hoist functions.

During Light-Load High-Speed operation with this parameter enabled, parameters Panel Torque Bias (F343), Creep Frequency (F346), and the Creep Time (F347) are set to a standard set of light-load profile values. Application-specific adjustments may be required.

Note: This function should be setup with a light load only.

## Automatic Light-Load High-Speed Operation Frequency <br> Program $\Rightarrow$ Special $\Rightarrow$ Crane/Hoist Settings <br> This parameter establishes the speed that the ASD will ramp to when operating in the Light-Load High-Speed mode. <br> Light-Load High-Speed Operation Switching Lower-Limit Frequency

Program $\Rightarrow$ Special $\Rightarrow$ Crane/Hoist Settings
This parameter sets an output frequency threshold that, once surpassed, allows the Light-Load High-Speed function to be used.

The Light-Load High-Speed function may be used if the frequency threshold set at this parameter and the following conditions are met:

Direct Access Number - F330
Parameter Type - Numerical

Changeable During Run - No
Minimum - 30.00
Maximum - Upper Limit (F012)
Units - Hz
Direct Access Number - F331
Parameter Type - Numerical
Factory Default - $\mathbf{4 0 . 0 0}$
Changeable During Run - Yes
Minimum - 30.0
Maximum - Upper Limit (F012)
Units - Hz

1) Light-Load High-Speed Operation Enable is configured at F328.
2) The output torque is less than the setting established in F335 when reaching the frequency setting here.

## Light-Load High-Speed Operation Load Wait Time <br> Program $\Rightarrow$ Special $\Rightarrow$ Crane/Hoist Settings

This parameter determines the length of time that the load requirement must meet the Light-Load High-Speed criteria before the Light-Load High-Speed Enable (F328) is recognized.

Once recognized, the timer setting of F333 must expire to engage the LightLoad High-Speed function.
Light-Load High-Speed Operation Detection Time
Program $\Rightarrow$ Special $\Rightarrow$ Crane/Hoist Settings

After the time setting of F332 times out, this parameter determines the length of time that the Light-Load High-Speed criteria must be met until the LightLoad High-Speed function engages.

## Switching Load Torque During Power Running

Program $\Rightarrow$ Special $\Rightarrow$ Crane/Hoist Settings
During power running, this parameter establishes the threshold torque level that is used to determine if the Light-Load High-Speed (F328) operation may engage or remain engaged if active.

If the Light-Load High-Speed operation is terminated normal operation resumes.

Note: Power running may be during forward, reverse, acceleration, or deceleration, but not during regeneration.

## Heavy-Load Torque During Power Running

Program $\Rightarrow$ Special $\Rightarrow$ Crane/Hoist Settings
During power running, this parameter establishes the threshold torque level that is used to determine if the Light-Load High-Speed (F328) operation may engage or remain engaged if active.

If the Light-Load High-Speed operation is terminated normal operation resumes.
Heavy-Load Torque During Constant Power Running
Program $\Rightarrow$ Special $\Rightarrow$ Crane/Hoist Settings
During constant power running, this parameter establishes the threshold torque level that is used to determine if the Light-Load High-Speed (F328) operation may engage or remain engaged if active

If the Light-Load High-Speed operation is terminated normal operation resumes.
Switching Load Torque During Regenerative Braking
Program $\Rightarrow$ Special $\Rightarrow$ Crane/Hoist Settings
During regenerative braking, this parameter establishes the threshold torque level that is used to determine if the Light-Load High-Speed (F328) operation may engage or remain engaged if active

If the Light-Load High-Speed operation is terminated normal operation resumes.

## Braking Mode Selection

Program $\Rightarrow$ Torque $\Rightarrow$ Torque Control
This parameter is primarily used with lifting systems to allow for enough torque to be produced after receiving a Run command before releasing the brake. Without this feature the load would drop for a period once the brake was released.

This parameter enables this function by setting the system operating mode.

Direct Access Number - F335

Changeable During Run - Yes

## Torque Bias Input Selection

Program $\Rightarrow$ Torque $\Rightarrow$ Torque Control
Once enabled at parameter F302, this parameter sets the source of the input signal that will set the torque level used to provide the Braking Mode Selection function of parameter F302.

Settings:
0 - Disabled
1 - VI/II (V/I)
$2-\mathrm{RR}$
3 - RX
4 - Panel Keypad
5 - RS485 2-Wire
6 - RS485 4-Wire
7 - Communication Option Board
8 - RX2 (AI1)
Panel Torque Bias
Program $\Rightarrow$ Torque $\Rightarrow$ Torque Control
Once enabled at parameter F302, this parameter establishes the torque bias setting to which the setting of F302 will either add to or subtract from to produce the final torque value used to carry out the Braking Mode Selection function of parameter F302.

Once enabled at parameter F302, this parameter sets the sensitivity of the torque control source selected at F302 for the Braking Mode Selection function of parameter F302.

Release Time
Program $\Rightarrow$ Torque $\Rightarrow$ Torque Control
Once enabled at parameter F302, this parameter sets the time that the brake will hold after the requirements of the Braking Mode Selection function of parameter F302 have been met.

## Creeping Frequency

Program $\Rightarrow$ Torque $\Rightarrow$ Torque Control
Once enabled at parameter F302, and while running, upon receiving a Stop command this parameter sets an output frequency to be provided for the duration of the time setting of parameter F302.

## Creeping Time

Program $\Rightarrow$ Torque $\Rightarrow$ Torque Control
Once the Creep function of F346 is activated, this parameter determines the duration of activation of the Creep function.

Braking Time Learning Function
Program $\Rightarrow$ Torque $\Rightarrow$ Torque Control
This parameter is used to establish approximate settings for parameters F343, F345, F346, and F347.

Note: $\quad$ Setting this parameter should be done using a light load only.
Set this parameter to Brake Signal Learning. Provide a Run command. The aforementioned parameters will receive approximate values. Applicationspecific adjustments may be required when done.

Settings:
0 - Disabled
1 - Enabled

## Accel/Decel Suspend

Program $\Rightarrow$ Fundamental $\Rightarrow$ Accel/Decel 1 Settings
To maintain a constant speed setting while running, this parameter may be used to suspend speed changes for a user-set length of time.
The Accel/Decel Suspend function is enabled by setting this parameter to either Terminal Board Input or to F350 - F353.
Selecting Terminal Board Input at this parameter requires that a discrete input terminal be set to Dwell Signal (see Table 5 on pg. 234 for a listing of available settings). Upon activation of the Dwell Signal terminal the output frequency remains at the at-activation speed for the duration of the activation. When deactivated the programmed accel or decel ramp resumes.

Selecting F350 - F353 at this parameter requires that the acceleration and/or the deceleration Suspend Frequency and Suspend Time settings be completed at F350, F351, F352, and F353. Upon reaching the frequency setting of F350 (Accel) or F352 (Decel), the Accel/Decel ramp will cease and the output frequency will hold at the threshold frequency setting for the time setting of F351 for acceleration or F353 for deceleration.

Settings:
0 - Off

Acceleration Suspend Frequency
Program $\Rightarrow$ Fundamental $\Rightarrow$ Accel/Decel 1 Settings
When Enabled at F349, this parameter is used to set the frequency at which the Acceleration Suspend function will activate.

During acceleration, this parameter sets the frequency at which acceleration will stop and the motor will run at the setting of this parameter for the time setting of F351.

## Acceleration Suspend Time

Program $\Rightarrow$ Fundamental $\Rightarrow$ Accel/Decel 1 Settings

When Enabled at F349, this parameter is used to set the duration of activation of the Acceleration Suspend function when initiated by reaching the Acceleration Suspend Frequency setting (F350).
Once this parameter times out the acceleration rate will resume from the point of suspension.

Deceleration Suspend Frequency
Program $\Rightarrow$ Fundamental $\Rightarrow$ Accel/Decel 1 Settings
When Enabled at F349, this parameter is used to set the frequency at which the Deceleration Suspend function will activate.

During deceleration, this parameter sets the frequency at which deceleration will stop and the motor will run at the setting of this parameter for the time setting of F353.

## Deceleration Suspend Time

Program $\Rightarrow$ Fundamental $\Rightarrow$ Accel/Decel 1 Settings
When Enabled at F349, this parameter is used to set the duration of activation of the Deceleration Suspend function when initiated by reaching the Deceleration Suspend Frequency setting (F352).
Once this parameter times out the deceleration rate will resume from the point of suspension.

## Commercial Power/ASD Output Switching

Program $\Rightarrow$ Terminal $\Rightarrow$ Line Power Switching

## This parameter Enables/Disables the Commercial Power/ASD Output

 Switching function.When enabled, the system may be set up to discontinue using the output of the drive and to switch to the commercial power in the event that 1 ) a trip is incurred, 2) a user-set frequency is reached, or 3 ) if initiated by a discrete input terminal.

Once set up with the proper switching frequency and hold times, the system will switch to commercial power upon reaching the F355 frequency criterion.

Switching may also be accomplished manually by activating the discrete input terminal Commercial Power ASD Switching. Terminal activation forces the ASD output speed to accelerate to the F355 switching frequency, resulting in the ASD-to-commercial power switching.
Deactivation of the discrete input terminal starts the hold-time counter setting (F356) for ASD-to-commercial power switching. Once timed out the motor resumes normal commercial power operation.

## Settings:

0 - Off
1 - Switch at Signal Input and Trip
2 - Switch at Signal Input with Switching Frequency
3 - Switch at Signal Input and Trip with Switching Frequency

## Switching Setup Requirements

F354-Enable the switching function.
F355 - Set the switching frequency.
F356 - (Speed) Hold -time before applying ASD output after the switching criteria has been met.

F357 - (Speed) Hold -time before applying commercial power after the switching criteria has been met.

F358 - (Speed) Hold -time of applying commercial power after the switching criteria has been met.

Set a discrete input terminal to Commercial Power ASD Switching.
Set OUT1 and OUT2 to Commercial Power/ASD Switching 1 and 2, respectively.

Note: Ensure that the switching directions are the same and that F311 is set to Permit All.

Note: The OUT1 and OUT2 outputs assigned to Commercial Power/ ASD Switching Output are used to actuate the re-routing contactors.

## Direct Access Number - F354

Parameter Type - Selection List
Factory Default - Off
Changeable During Run - No

## Commercial Power/ASD Switching Frequency

Program $\Rightarrow$ Terminal $\Rightarrow$ Line Power Switching
When enabled at F354 and with a properly configured discrete output terminal, this parameter sets the frequency at which the At Frequency Powerline Switching function engages.

The At Frequency Powerline Switching function commands the system to discontinue using the output of the drive and to switch to commercial power once reaching the frequency set here.
See parameter F354 for more information on this setting

## ASD-Side Switching Wait Time <br> Program $\Rightarrow$ Terminal $\Rightarrow$ Line Power Switching

This parameter determines the amount of time that the drive will wait before outputting a signal to the motor once the switch-to-drive-output criteria has been met.

See parameter F354 for more information on this setting.

Direct Access Number - F355
Parameter Type - Numerical
Factory Default - $\mathbf{6 0 . 0 0}$
Changeable During Run - Yes
Minimum - 0.00
Maximum - Max. Freq. (F011)
Units - Hz

## Commercial Power Switching Wait Time

Program $\Rightarrow$ Terminal $\Rightarrow$ Line Power Switching
This parameter determines the amount of time that the drive will wait before allowing commercial power to be applied to the motor once the switch-to-commercial-power criteria has been met.

See parameter F354 for more information on this setting.

## Commercial Power Switching Freq. Hold Time

Program $\Rightarrow$ Terminal $\Rightarrow$ Line Power Switching
This parameter determines the amount of time that the connection to commercial power is maintained once the switch-to-drive-output criteria has been met.

See parameter F354 for more information on this setting.

## PID Control Switching

Program $\Rightarrow$ Feedback $\Rightarrow$ Feedback Settings

This parameter is used to set the PID control mode.
Selecting Process PID uses the upper and Lower-Limit settings of parameters F367 and F368.

Selecting Speed PID uses the upper and Lower-Limit settings of parameters F370 and F371.

Settings:
0 - PID Off
1 - Process PID
2 - Speed PID
3 - Easy Positioning PID (Not Used with the G9 ASD)

## PID Feedback Signal

Program $\Rightarrow$ Feedback $\Rightarrow$ Feedback Settings

This parameter Enables/Disables PID feedback control. When enabled, this parameter determines the source of the motor-control feedback.

Settings:
$0-\mathrm{PID}$ Control Disabled
$1-\mathrm{VI} / \mathrm{II}(\mathrm{V} / \mathrm{I})$
$2-\mathrm{RR}$
$3-\mathrm{RX}$
$4-\mathrm{RX} 2(\mathrm{AI} 1)$
$5-\mathrm{Option} \mathrm{V} / \mathrm{I}$
$6-\mathrm{PG}$ Feedback Option

Proportional-Integral-Derivative (PID) - A closed-loop control technique that seeks error minimization by reacting to three values: One that is proportional to the error, one that is representative of the error, and one that is representative of the rate of change of the error.

## PID Feedback Delay Filter

Program $\Rightarrow$ Feedback $\Rightarrow$ Feedback Settings
This parameter determines the delay in the ASD output response to the motorcontrol feedback signal (signal source is selected at F360).

PID Feedback Proportional (P) Gain
Program $\Rightarrow$ Feedback $\Rightarrow$ Feedback Settings
This parameter determines the degree that the Proportional function affects the output signal. The larger the value entered here, the quicker the drive responds to changes in feedback.

## PID Feedback Integral (I) Gain

Program $\Rightarrow$ Feedback $\Rightarrow$ Feedback Settings
This parameter determines the degree that the Integral function affects the output signal. The smaller the value here, the more pronounced the effect of the integral function on the output signal.

## PG Disconnection Detection

Program $\Rightarrow$ Feedback $\Rightarrow$ PG Settings
This parameter Enables/Disables the system's monitoring of the PG connection status when using encoders with line driver outputs.

Note: $\quad$ The PG Vector Feedback Board option is required to use this feature.

Settings:
0 - Disabled
1 - Enabled with Filter
3 - Enabled (Detect Momentary Power Fail)

## Simple Positioning Completion Range

Program $\Rightarrow$ Feedback $\Rightarrow$ PG Settings
While operating in the Positioning Control mode, this parameter sets the range of accuracy for a Stop command initiated via the terminal board.
If the setting is too low the stop may be too abrupt.

## Autotuning 1

Program $\Rightarrow$ Motor $\Rightarrow$ Vector Motor Model
This parameter sets the Autotune command status.
Selecting Reset Motor Defaults for this parameter sets parameters F410, F411, F412, and F413 to the factory default settings.

If selecting Autotune on Run Command, Autotune Initiated by Input Terminal, or Autotune of Detail Parameters for this parameter set the Base Frequency, Base Frequency Voltage, and the Motor Rated Revolutions to the nameplated values of the motor to achieve the best possible Autotune precision.

Settings:
0 - Autotune Disabled
1 - Reset Motor Defaults
2 - Enable Autotune on Run Command
3 - Autotuning by Input Terminal Signal (see Table 5 on pg. 234)
4 - Motor Constant Auto Calculation

## Slip Frequency Gain

Program $\Rightarrow$ Motor $\Rightarrow$ Vector Motor Model
This parameter provides a degree of slip compensation for a given load. A higher setting here decreases the slip allowed for a given load/ASD output ratio.

## Stall Prevention Factor 1

Program $\Rightarrow$ Protection $\Rightarrow$ Stall
This parameter is to be adjusted in the event that the motor stalls when operated above the base frequency

If a momentary heavy load occurs the motor may stall before the load current reaches the stall prevention level setting of F601.

A drop in the supply voltage may cause fluctuations of the load current or may cause motor vibration. A gradual adjustment of this parameter may alleviate this condition.

Start with a setting of 85 at these parameters and gradually adjust them from there one at a time until the desired results are produced.
Adjustments to this parameter may increase the load current of the motor and subsequently warrant an adjustment at the Motor Overload Protection Level setting.

## Torque Command Selection

Program $\Rightarrow$ Torque $\Rightarrow$ Torque Control
When operating in the Torque Control mode, this parameter allows the user to select the source of the torque command signal.

Settings:

$$
\begin{aligned}
& 1 \text { - VI/II (V/I) } \\
& 2 \text {-RR } \\
& 3 \text {-RX } \\
& 4 \text { - Panel Keypad (F725 Setting) } \\
& 5 \text { - RS485 2-Wire } \\
& 6 \text { - RS485 4-Wire } \\
& 7 \text { - Communication Option Board } \\
& 8 \text { - RX2 Option (AI1) }
\end{aligned}
$$

## Tension Torque Bias Input

Program $\Rightarrow$ Torque $\Rightarrow$ Torque Control
This parameter Enables/Disables the Tension Torque Bias input function
This feature is enabled by selecting a Tension Torque Bias input signal source.

## Settings:

0 — Disabled
1 - VI/II (V/I)
2 -RR
3 - RX
4 - Panel Keypad (Not Used)
5 -RS485 2-Wire
6 - RS485 4-Wire
7 - Communication Option Board
8 - RX2 Option (AI1)

```

8 - RX2 Option (AI1)

## Forward Speed Limit Input

Program $\Rightarrow$ Torque $\Rightarrow$ Torque Speed Limiting
This parameter Enables/Disables the Forward Speed Limit Input control function. When enabled and operating in the Torque Control mode, the forward speed limit is controlled by the input selected here.

If Setting is selected, the value set at F426 is used as the Forward Speed Limit input.

Settings:

$$
\begin{aligned}
& 0-\text { Disabled } \\
& 1-\mathrm{VI} / \mathrm{II}(\mathrm{~V} / \mathrm{I}) \\
& 2-\mathrm{RR} \\
& 3-\mathrm{RX} \\
& 4-\mathrm{F} 426 \text { Setting }
\end{aligned}
$$

## Forward Speed Limit Level

Program $\Rightarrow$ Torque $\Rightarrow$ Torque Control
This parameter provides a value to be used as the Forward Speed Limit setting if F426 Setting is selected at F425.

Direct Access Number - F425
Parameter Type - Selection List
Factory Default - Disabled
Changeable During Run - Yes

## Direct Access Number - F426

Parameter Type - Numerical
Factory Default - $\mathbf{8 0 . 0}$
Changeable During Run - Yes
Minimum - 0.00
Maximum - Upper Limit (F012)
Units - Hz

## Reverse Speed Limit Input

Program $\Rightarrow$ Torque $\Rightarrow$ Torque Control
This parameter Enables/Disables the Reverse Speed Limit Input control function. When enabled and operating in the Torque Control mode, the reverse speed limit is controlled by the terminal selected here. If Setting is selected, the value set at F428 is used as the Reverse Speed Limit input.

## Settings:

0 — Disabled
1 - VI/II (V/I)
2 -RR
3 - RX
4 - Setting (F428)

## Reverse Speed Limit Input Level

Program $\Rightarrow$ Torque $\Rightarrow$ Torque Control
This parameter provides a value to be used as the Reverse Speed Limit setting if Setting is selected at F427.

Direct Access Number - F427
Parameter Type - Selection List
Factory Default - Disabled
Changeable During Run - Yes

## Direct Access Number - F428

Parameter Type - Numerical
Factory Default - $\mathbf{8 0 . 0}$
Changeable During Run - Yes
Minimum - 0.00
Maximum - Upper Limit (F012)
Units - Hz
Direct Access Number - F430
Parameter Type - Selection List
Factory Default - Disabled
Changeable During Run - Yes

The system has the ability to limit the amount that the speed may vary as a function of a changing load while operating in the Torque Control mode. This parameter sets the input terminal that will be used to control the allowable speed variance.

Settings:
0 - Disabled
$1-\mathrm{VI} / \mathrm{II}(\mathrm{V} / \mathrm{I})$
2 -RR
3 - RX
4-F431 Setting

## Speed Limit (torque=0) Center Value

Program $\Rightarrow$ Torque $\Rightarrow$ Torque Speed Limiting
The system has the ability to limit the amount that the speed may vary as a function of a changing load while operating in the Torque Control mode. This parameter sets the targeted speed. The plus-or-minus value (range) for this setting may be set at F432.

Direct Access Number - F431
Parameter Type - Numerical
Factory Default - $\mathbf{0 . 0 0}$
Changeable During Run - Yes
Minimum - 0.00
Maximum - Max. Freq. (F011)
Units - Hz

## Speed Limit (torque=0) Band

Program $\Rightarrow$ Torque $\Rightarrow$ Torque Speed Limiting
The system has the ability to limit the amount that the speed may vary as a function of a changing load while operating in the Torque Control mode. This parameter sets a plus-or-minus value (range) for the Speed Limit Torque Level (F431).

Rotation in Specified Direction ONLY
Program $\Rightarrow$ Torque $\Rightarrow$ Torque Speed Limiting

This parameter Enables/Disables the Forward Run or Reverse Run mode.
If either direction is disabled, commands received for the disabled direction will not be recognized.

If both directions are disabled, the received direction command will determine the direction of the motor rotation.

Settings
0 — Disabled
1 - Enabled

Power Running Torque Limit 1
Program $\Rightarrow$ Torque $\Rightarrow$ Torque Limit Settings
This parameter determines the source of the control signal for the positive torque limit setting.

If Setting is selected, the value set at F441 is used as the Power Running Torque Limit 1 input.

Settings:
1 - VI/II (V/I)
2 - RR
3 - RX
4 - F441 (Setting)
Power Running Torque Limit 1 Level
Program $\Rightarrow$ Torque $\Rightarrow$ Torque Limit Settings
This parameter provides a value for the Power Running Torque Limit 1 setting if F441 Setting is selected at parameter F440.
This value provides the positive torque Upper-Limit for the 1 motor.

Direct Access Number - F432
Parameter Type - Numerical
Factory Default - $\mathbf{0 . 0 0}$
Changeable During Run - Yes
Minimum - 0.00
Maximum - Max. Freq. (F011)
Units - Hz
Direct Access Number - F435
Parameter Type - Selection List
Factory Default - Disabled
Changeable During Run - No

Direct Access Number - F440
Parameter Type - Selection List

Factory Default - $\mathbf{2 5 0 . 0}$ (Disabled)
Changeable During Run - Yes
Minimum - 0.00
Maximum - 250.0 (Disabled)
Units - \%

## Regenerative Braking Torque Limit 1 <br> Program $\Rightarrow$ Torque $\Rightarrow$ Torque Limit Settings

This parameter determines the source of the Regenerative Torque Limit control signal.

If Setting is selected, the value set at F 443 is used for this parameter.
Settings:
1 - VI/II (V/I)
2 -RR
3 - RX
4 - F443 (Setting)

## Regenerative Braking Torque Limit 1 Level <br> Program $\Rightarrow$ Torque $\Rightarrow$ Torque Limit Settings <br> This parameter provides a value to be used as the Regeneration Torque Limit $\mathbf{1}$ if F443 Setting is selected at parameter F442. <br> Set this parameter to $\mathbf{2 5 0 \%}$ to disable this function.

## Power Running Torque Limit 2 Level

Program $\Rightarrow$ Torque $\Rightarrow$ Manual Torque Limit Settings
This parameter is used to set the positive torque Upper-Limit for the 2 motor profile when multiple motors are controlled by a single drive or when a single motor is to be controlled by multiple profiles.

## Regenerative Braking Torque Limit 2 Level

Program $\Rightarrow$ Torque $\Rightarrow$ Manual Torque Limit Settings
This parameter is used to set the negative torque Upper-Limit for the 2 motor profile when multiple motors are controlled by a single drive or when a single motor is to be controlled by multiple profiles.

## Power Running Torque Limit 3 Level

Program $\Rightarrow$ Torque $\Rightarrow$ Manual Torque Limit Settings
This parameter is used to set the positive torque Upper-Limit for the 3 motor profile when multiple motors are controlled by a single drive or when a single motor is to be controlled by multiple profiles.

Parameter Type - Selection List
Factory Default - In Sync with Accel/ Decel

Changeable During Run - Yes

In a Crane/Hoist application that is operating using a mechanical brake, this parameter is used to minimize the delay between the brake release and the output torque reaching a level that can sustain the load.
This setting may reference time or the operating speed of the motor.
Settings:
0 - In Sync with Accel/Decel
1 - In Sync with Minimum Time

## Power Running Stall Continuous Trip Detection Time

Program $\Rightarrow$ Protection $\Rightarrow$ Stal

This parameter is used to extend the Over-Voltage Stall (F305) and the OverCurrent Stall (F017) time settings.

Direct Access Number - F452
Parameter Type - Numerical
Factory Default - $\mathbf{0 . 0}$
Changeable During Run - Yes
Minimum - 0.0
Maximum - 1.0
Units - Seconds

## Stall Prevention During Regeneration

Program $\Rightarrow$ Protection $\Rightarrow$ Stall
This function of this parameter is to disable the Over-Voltage Stall (F305) and the Over-Current Stall (F017) function during regeneration only.

Application-specific conditions may occur that warrant disabling the Stall function during regeneration.

Settings:

> 0 - Disabled (Stall During Regenerative Braking)
> 1 - Enabled (No Stall During Regenerative Braking)

## Current Control Proportional Gain

Program $\Rightarrow$ Feedback $\Rightarrow$ PG Settings
This parameter sets the sensitivity of the drive when monitoring the output current to control speed.

The larger the value entered here, the more sensitive the drive is to changes in the received feedback.

Speed Loop Proportional Gain
Program $\Rightarrow$ Feedback $\Rightarrow$ PG Settings
During closed-loop operation, this parameter sets the response sensitivity of the drive when monitoring the output speed for control.
The larger the value entered here, the larger the change in the output speed for a given received feedback signal.

## Speed Loop Stabilization Coefficient

Program $\Rightarrow$ Feedback $\Rightarrow$ PG Settings
During closed-loop operation, this parameter sets the response sensitivity of the drive when monitoring the output speed for control.
The larger the value entered here, the quicker the response to changes in the received feedback.
Load Moment of Inertia 1
Program $\Rightarrow$ Feedback $\Rightarrow$ PG Settings
This parameter is used for calculating accel/decel torque when compensating for load inertia while operating in the Drooping Control mode.

## Second Speed Loop Proportional Gain

Program $\Rightarrow$ Feedback $\Rightarrow$ PG Settings
During closed-loop operation, this parameter sets the sensitivity of the drive when monitoring the output speed for control.

The larger the value entered here, the more sensitive the drive is to changes in the received feedback.

## Second Speed Loop Stabilization Coefficient

Program $\Rightarrow$ Feedback $\Rightarrow$ PG Settings
During closed-loop operation, this parameter sets the response sensitivity of the drive when monitoring the output speed for control.

The larger the value entered here, the quicker the response to changes in the received feedback.

Load Moment of Inertia 2
Program $\Rightarrow$ Feedback $\Rightarrow$ PG Settings
This parameter is used for calculating accel/decel torque when compensating for load inertia while operating in the Drooping Control mode.

## Speed PID Switching Frequency

Program $\Rightarrow$ Feedback $\Rightarrow$ Feedback Settings
While running, this parameter establishes the threshold speed setting that is used to determine if PID control may engage or remain engaged if active.

$$
\text { Program } \Rightarrow \text { Frequency } \Rightarrow \text { Speed Reference Setpoints }
$$

This parameter is used to fine-tune the bias of the $\mathbf{V} / \mathbf{I}$ input terminals.
Note: See note on pg. 44 for more information on the V/I terminal.
This setting may be used to ensure that the zero level of the input source (pot, pressure transducer, flow meter, etc.) is also the zero level setting of the ASD system.

This is accomplished by setting the input source to zero and adjusting this setting to provide an output of zero from the ASD.

## VI/II (V/I) Input Gain

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to fine tune the gain of the $\mathbf{V} / \mathbf{I}$ input terminals.
Note: $\quad$ See note on pg. 44 for more information on the V/I terminal.
This setting may be used to ensure that the $100 \%$ level of the input source (pot, pressure transducer, flow meter, etc.) is also the $100 \%$ level setting of the ASD system.
This is accomplished by setting the input source to $100 \%$ and adjusting this setting to provide an output of $100 \%$ from the ASD.

## RR Input Bias

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints

This parameter is used to fine tune the bias of the $\mathbf{R R}$ input terminal when this terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.
This setting may be used to ensure that the zero level of the input source (pot, pressure transducer, flow meter, etc.) is also the zero level setting of the ASD system.
This is accomplished by setting the input source to zero and adjusting this setting to provide an output of zero from the ASD.

## RR Input Gain

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to fine tune the gain of the $\mathbf{R R}$ input terminal when this terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.
This setting may be used to ensure that the $100 \%$ level of the input source (pot, pressure transducer, flow meter, etc.) is also the $100 \%$ level setting of the ASD system.
This is accomplished by setting the input source to $100 \%$ and adjusting this setting to provide an output of $100 \%$ from the ASD.

## RX Input Bias

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to fine tune the bias of the $\mathbf{R X}$ input terminal when this terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.
This setting may be used to ensure that the zero level of the input source (pot, pressure transducer, flow meter, etc.) is also the zero level setting of the ASD system.
This is accomplished by setting the input source to zero and adjusting this setting to provide an output of zero from the ASD.

## RX Input Gain

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to fine tune the gain of the $\mathbf{R X}$ input terminal when this terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.
This setting may be used to ensure that the $100 \%$ level of the input source (pot, pressure transducer, flow meter, etc.) is also the $100 \%$ level setting of the ASD system.
This is accomplished by setting the input source to $100 \%$ and adjusting this setting to provide an output of $100 \%$ from the ASD.

## RX2 (AI1) Input Bias

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to fine tune the bias of the RX2 (AI1) input terminal when this terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.

This setting may be used to ensure that the zero level of the input source (pot, pressure transducer, flow meter, etc.) is also the zero level setting of the ASD system.
This is accomplished by setting the input source to zero and adjusting this setting to provide a zero output from the ASD.

## RX2 (Al1) Input Gain

Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints
This parameter is used to fine tune the gain of the RX2 (AI1) input terminal when this terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.

This setting may be used to ensure that the $100 \%$ level of the input source (pot, pressure transducer, flow meter, etc.) is also the $100 \%$ level setting of the ASD system.
This is accomplished by setting the input source to $100 \%$ and adjusting this setting to provide an output of $100 \%$ from the ASD.

## Al2 (Option V/I) Input Bias <br> Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints

This parameter is used to fine tune the bias of the Optional AI2 input terminal when this terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.

This setting may be used to ensure that the zero level of the input source (pot, pressure transducer, flow meter, etc.) is also the zero level setting of the ASD system.
This is accomplished by setting the input source to zero and adjusting this setting to provide a zero output from the ASD.

## AI2 (Option V/I) Input Gain <br> Program $\Rightarrow$ Frequency $\Rightarrow$ Speed Reference Setpoints

This parameter is used to fine tune the gain of the Optional AI2 input terminal when this terminal is used as the control input while operating in the Speed Control mode or the Torque Control mode.

This setting may be used to ensure that the $100 \%$ level of the input source (pot, pressure transducer, flow meter, etc.) is also the $100 \%$ level setting of the ASD system
This is accomplished by setting the input source to $100 \%$ and adjusting this setting to provide an output of $100 \%$ from the ASD.

## Acceleration Time 2

Program $\Rightarrow$ Special $\Rightarrow$ Acc/Dec 1 - 4 Settings
This parameter specifies the time in seconds for the output of the ASD to go from 0.0 Hz to the Maximum Frequency for the $\mathbf{2}$ Acceleration profile. The Accel/Decel pattern may be set using F502. The minimum Accel/Decel time may be set using F508.
This setting is also used to determine the acceleration rate of the UP/DOWN Frequency Functions.
Note: An acceleration time shorter than that which the load will allow may cause nuisance tripping and mechanical stress to loads. Automatic Accel/Decel, Stall, and Ridethrough settings may lengthen the acceleration times.

## Deceleration Time 2

Program $\Rightarrow$ Fundamental $\Rightarrow$ Accel/Decel 1 Settings
This parameter specifies the time in seconds for the output of the ASD to go from the Maximum Frequency to 0.0 Hz for the $\mathbf{2}$ Deceleration profile. The Accel/Decel pattern may be set using F502. The minimum Accel/Decel time may be set using F508.
This setting is also used to determine the deceleration rate of the UP/DOWN Frequency Functions.

Note: A deceleration time shorter than the load will allow may cause nuisance tripping and mechanical stress to loads. Automatic Accel/Decel, Stall, and Ridethrough settings may lengthen the deceleration times.

## Direct Access Number - F501

Maximum - 6000
Units - Seconds

## Acc/Dec Pattern 1

Program $\Rightarrow$ Special $\Rightarrow$ Accel/Decel 1 - 4 Settings
This parameter enables a user-selected preprogrammed output profile that controls the acceleration and deceleration pattern for the $\mathbf{1}$ Accel/Decel parameter.

## Settings:

0 - Linear
1 - S-Pattern 1
2 -S-Pattern 2

The figures below provide a profile of the available accel/decel patterns.

Linear acceleration and deceleration is the default pattern and is used on most applications.

S-pattern 1 is used for applications that require quick acceleration and deceleration. This setting is also popular for applications that require shock absorption at the start of acceleration or deceleration.

S-pattern 2 decreases the rate of change above the base frequency for acceleration and deceleration.

## Acc/Dec Pattern 2

Program $\Rightarrow$ Special $\Rightarrow$ Accel/Decel 1 - 4 Settings
This parameter enables a user-selected preprogrammed output profile that controls the acceleration and deceleration pattern for the $\mathbf{2}$ Accel/Decel parameter.

## Settings:

0 - Linear
1 - S-Pattern
2 -S-Pattern 2

Direct Access Number - F503
Parameter Type - Selection List
Factory Default - Linear
Changeable During Run - Yes

## Acc/Dec Pattern 1 - 4

## Program $\Rightarrow$ Special $\Rightarrow$ Acc/Dec Special

Four Acceleration times and four Deceleration times may be set up and run individually. Accel/Decel Time 1-4 may be selected using this parameter setting or switched via threshold frequencies, or by discrete input terminal.

This parameter is used to select one of the four configured accel/decel profiles to be used.

Settings:
1 - Acc/Dec 1
2 - Acc/Dec 2
3 - Acc/Dec 3
4 - Acc/Dec 4
Each Accel/Decel selection is comprised of an Acceleration Time,
Deceleration Time, and a Pattern selection. Selection 1, 2, and 3 have a
Switching Frequency setting. The Switching Frequency is used as a threshold frequency that, once reached, the ASD switches to the next Acc/Dec selection.
Switching Frequency settings are used during acceleration and deceleration. A switching frequency setting is not required for Acc/Dec 4.

Acc/Dec 1 is set up using parameters F009 (Acc Time), F010 (Dec Time), F502 (Pattern), and F505 (Switching Frequency).

Acc/Dec 2 is set up using parameters F500 (Acc Time), F501 (Dec Time), F503 (Pattern), and F513 (Switching Frequency).

Acc/Dec 3 is set up using parameters F510 (Acc Time), F511 (Dec Time), F512 (Pattern), and F517 (Switching Frequency).

Acc/Dec 4 is set up using parameters F514 (Acc Time), and F515 (Dec Time), F516 (Pattern).

This parameter (F504) is used to manually select Acc/Dec 1-4.
To switch using the Terminal Board, assign the functions Acc/Dec Switching $\mathbf{1}$ and Acc/Dec Switching 2 to two discrete input terminals. Activation combinations of the two terminals result in the Acc/Dec 1-4 selections as shown in Table 4.
Figure 30 shows the setup requirements and the resulting output frequency response when using Switching Frequency settings to control the Acc/Dec response of the ASD output.

While operating using S-Pattern 1 the system performance may be further enhanced by the adjustment of parameters F506 - F509. These settings provide for upper and lower Acc/Dec limit adjustments. These settings are used to extend or shorten the upper or lower Acc/Dec curve.

Note: If operating from the Local mode, press Esc from the Frequency Command screen to access this parameter.

## Accel/Decel Switching Frequency 1

Program $\Rightarrow$ Special $\Rightarrow$ Accel/Decel Special
This parameter sets the frequency at which the acceleration control is switched from the Accel 1 profile to the Accel 2 profile during a multiple-acceleration profile configuration.

```
Direct Access Number - F504
Parameter Type - Selection List
Factory Default - 1
Changeable During Run - Yes
```

Table 4.
Using combinations of discrete terminal activations Accel/Decel profiles 1-4 may be selected.

| Acc/Dec Switching Truth |  |  |
| :---: | :---: | :---: |
| A/D SW 1 | A/D SW 2 | Acc/Dec \# Out |
| 0 | 0 | 1 |
| 0 | 1 | 2 |
| 1 | 0 | 3 |
| 1 | 1 | 4 |
| 1 = Discrete terminal activation. |  |  |

Figure 30. Using Acc/Dec Switching.

Direct Access Number - F505
Parameter Type - Numerical
Factory Default - $\mathbf{0 . 0 0}$
Changeable During Run - Yes
Minimum - 0.00
Maximum - Max. Freq. (F011)
Units - Hz

## S-Pattern Acceleration Lower-Limit Adjustment

Program $\Rightarrow$ Special $\Rightarrow$ Accel/Decel Special
During an S-Pattern $\mathbf{1}$ or $\mathbf{2}$ sequence, this parameter setting modifies the acceleration rate for the lower part of the acceleration curve by the percentage set here.
This function is commonly used with transportation and lifting applications.
See parameter F502 on pg. 165 for more information on this setting.

## S-Pattern Acceleration Upper-Limit Adjustment

$$
\text { Program } \Rightarrow \text { Special } \Rightarrow \text { Accel/Decel Special }
$$

During an S-Pattern $\mathbf{1}$ or $\mathbf{2}$ sequence, this parameter setting modifies the acceleration rate for the upper part of the acceleration curve by the percentage set here.
This function is commonly used with transportation and lifting applications. See parameter F502 on pg. 165 for more information on this setting.

## S-Pattern Deceleration Lower-Limit Adjustment

Program $\Rightarrow$ Special $\Rightarrow$ Accel/Decel Special
During an S-Pattern $\mathbf{1}$ or $\mathbf{2}$ sequence, this parameter setting modifies the deceleration rate for the lower part of the deceleration curve by the percentage set here.
This function is commonly used with transportation and lifting applications.
See parameter F502 on pg. 165 for more information on this setting.

## S-Pattern Deceleration Upper-Limit Adjustment

Program $\Rightarrow$ Special $\Rightarrow$ Accel/Decel Special
During an S-Pattern $\mathbf{1}$ or $\mathbf{2}$ sequence, this parameter setting modifies the deceleration rate for the upper part of the deceleration curve by the percentage set here.
This function is commonly used with transportation and lifting applications.
See parameter F502 on pg. 165 for more information on this setting.

## Acceleration Time 3

Program $\Rightarrow$ Special $\Rightarrow$ Accel/Decel 1 - 4 Settings
This parameter specifies the time in seconds for the output of the ASD to go from 0.0 Hz to the Maximum Frequency for the $\mathbf{3}$ Acceleration profile. The Accel/Decel pattern may be set using F502. The minimum Accel/Decel time may be set using F508.

Note: An acceleration time shorter than that which the load will allow may cause nuisance tripping and mechanical stress to loads. Automatic Accel/Decel, Stall, and Ridethrough settings may lengthen the acceleration times.

Direct Access Number - F506
Parameter Type - Numerical
Factory Default - $\mathbf{1 0}$
Changeable During Run - Yes
Minimum — 0
Maximum - 50
Units - \%
Direct Access Number - F507

Maximum - 50
Units - \%
Direct Access Number - F510
Parameter Type - Numerical
Factory Default - (ASD-Dependent)
Changeable During Run - Yes
Minimum - 0.1
Maximum - 6000
Units - Seconds

## Deceleration Time 3

Program $\Rightarrow$ Special $\Rightarrow$ Accel/Decel 1 - 4 Settings
This parameter specifies the time in seconds for the output of the ASD to go from the Maximum Frequency to 0.0 Hz for the $\mathbf{3}$ Deceleration profile.

The Accel/Decel pattern may be set using F502. The minimum Accel/Decel time may be set using F508.

Note: A deceleration time shorter than the load will allow may cause nuisance tripping and mechanical stress to loads. Automatic Accel/Decel, Stall, and Ridethrough settings may lengthen the deceleration times.

## Acceleration/Deceleration Pattern 3

Program $\Rightarrow$ Special $\Rightarrow$ Accel/Decel 1 - 4 Settings
This parameter enables a user-selected preprogrammed output profile that controls the acceleration and deceleration pattern for the $\mathbf{3}$ Accel/Decel parameter.

Settings:
0 - Linear
1 - S-Pattern 1
2 -S-Pattern 2

## Acceleration/Deceleration Switching Frequency 2

Program $\Rightarrow$ Special $\Rightarrow$ Accel/Decel Special
This parameter sets the frequency at which the acceleration control is switched from the Accel $\mathbf{2}$ profile to the Accel $\mathbf{3}$ profile during a multiple-acceleration profile configuration.

## Acceleration Time 4

Program $\Rightarrow$ Special $\Rightarrow$ Accel/Decel 1 - 4 Settings
This parameter specifies the time in seconds for the output of the ASD to go from 0.0 Hz to the Maximum Frequency for the $\mathbf{4}$ Acceleration profile. The Accel/Decel pattern may be set using F502. The minimum Accel/Decel time may be set using F508.

Note: An acceleration time shorter than that which the load will allow may cause nuisance tripping and mechanical stress to loads. Automatic Accel/Decel, Stall, and Ridethrough settings may lengthen the acceleration times.

## Direct Access Number - F511

Units - Hz
Direct Access Number - F514
Parameter Type - Numerical
Factory Default - (ASD-Dependent)
Changeable During Run - Yes
Minimum — 0.1
Maximum - 6000
Units - Seconds

## Deceleration Time 4

Program $\Rightarrow$ Special $\Rightarrow$ Accel/Decel 1 - 4 Settings
This parameter specifies the time in seconds for the output of the ASD to go from the Maximum Frequency to 0.0 Hz for the $\mathbf{4}$ Deceleration profile. The Accel/Decel pattern may be set using F502. The minimum Accel/Decel time may be set using F508.

Note: A deceleration time shorter than the load will allow may cause nuisance tripping and mechanical stress to loads. Automatic Accel/Decel, Stall, and Ridethrough settings may lengthen the deceleration times.

## Acceleration/Deceleration Pattern 4

Program $\Rightarrow$ Special $\Rightarrow$ Accel/Decel 1 - 4 Settings
This parameter enables a user-selected preprogrammed output profile that controls the acceleration and deceleration pattern for the $\mathbf{4}$ Accel/Decel parameter.

Settings:
0 - Linear
1 -S-Pattern 1
2-S-Pattern 2

## Acceleration/Deceleration Switching Frequency 3

Program $\Rightarrow$ Special $\Rightarrow$ Accel/Decel Special
This parameter sets the frequency at which the acceleration control is switched from the Accel 3 profile to the Accel $\mathbf{4}$ profile during a multiple-acceleration profile configuration.

## Pattern Operation Selection

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Pattern Run
Pattern Run operation is enabled by selecting Seconds or Minutes as a unit of measure for the Operation Time setting for the selected Preset Speeds.
See Parameter F523 for more information on Selections and Group Speeds setup.

## Settings:

0 - Disabled
1 - Enabled (Seconds)
2 - Enabled (Minutes)

## Pattern Operation Mode

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Pattern Run
This parameter sets the start condition of subsequent Pattern Runs after the initial Pattern Run has been terminated or has completed its programming.

## Settings:

$0-$ Reset After Stop
1 - Continue After Stop

## Pattern Group 1 Selection 1

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Speeds
Groups of configured Preset Speeds may be selected and run from this screen. The execution of grouped Preset Speeds in this manner is called a Pattern Run.
One to eight user-selected Preset Speeds may be run sequentially for a user-set number of repetitions. The group of user-selected Preset Speeds is called a Pattern Group. The Pattern Run function executes the user-set Pattern Group.

Pattern Group 1 is comprised of up to 8 Selections with each Selection being 1 of 15 possible Preset Speed settings. Skip may be selected to ignore a Selection.
This parameter allows the user to choose one configured Preset Speed that is to be used as Selection 1 (of 8) for Pattern Group 1. See F018 for information on configuring the individual Preset Speeds. Parameters F524-F530 may be setup for subsequent Selections 2-8.
One Preset Speed number ( $1-15$ ) or Skip is selected for Selection 1 (F523). The number of times to repeat Pattern Group 1 is selected at F522. Set this value to $\mathbf{2 5 5}$ to run forever.
Setup Pattern Group 2 at F531-F539 if more Preset Speed entries are required.

## Pattern Run Setup (for Pattern Group 1)

1. From Program $\Rightarrow$ Pattern Run $\Rightarrow$ Speeds, select the Preset Speeds to be used as the Pattern Group 1 set of Selections. Select a speed from the 1 15 configured presets; 1 speed number per Selection. Set any unused Selections to Skip.
2. From Program $\Rightarrow$ Pattern Run $\Rightarrow$ Pattern Run $\Rightarrow$ Pattern Operation Selection, enable the Pattern Run mode of operation by selecting Seconds or Minutes as the unit of measure for the Operation Time setting.
3. From Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time, set the run-time for each Preset Speed selected in step 1.
4. Configure two unused discrete input terminals for Pattern Operation Group 1 and Pattern Operation Trigger Signal.

Note: Activation of the Pattern Operation Group 1 discrete input terminal is required to enable Pattern Group 1 for use. Activation of the Pattern Operation Trigger Signal discrete input terminal starts the Pattern Group 1 pattern run.

Direct Access Number - F523

|  | 14 | 14 | 14 | 14 | 14 | 14 | 14 | 14 |
|  | 15 | 15 | 15 | 15 | 15 | 15 | 15 | 15 |

5. From Program $\Rightarrow$ Pattern Run $\Rightarrow$ Pattern Run $\Rightarrow$ Pattern 1 Repeat, set to the number of times that Pattern Group $\mathbf{1}$ is to be run. Set to $\mathbf{2 5 5}$ to run forever.
6. From Program $\Rightarrow$ Pattern Run $\Rightarrow$ Pattern Run $\Rightarrow$ Pattern Operation Mode, set the end-of-pattern command to Reset or Continue.
7. From the Remote mode (Local/Remote light is off), initiate a Run command (i.e., F and/or R terminal On ).
8. Connect the Pattern Operation Group 1 input terminal to $\mathbf{C C}$.
9. Connect the Pattern Operation Trigger Signal input terminal to $\mathbf{C C}$ and the Pattern Run will start and continue as programmed.
10. Open the Pattern Operation Trigger Signal connection to $\mathbf{C C}$ to stop the Pattern Run before its conclusion if required.

## Pattern Group 1 Selection 2 <br> Program $\Rightarrow$ Pattern Run $\Rightarrow$ Speeds

This parameter allows the user to select 1 of 15 configured Preset Speeds as the number 2 Selection to be included in Pattern Group 1.

Skip may be selected to ignore this Selection.
Setting
0 - Skip
1-15 Preset Speed Number
See F523 for more information on this parameter

## Pattern Group 1 Selection 3

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Speeds
This parameter allows the user to select 1 of 15 configured Preset Speeds as the number 3 Selection to be included in Pattern Group 1.

Skip may be selected to ignore this Selection.
Setting
0 - Skip
1-15 Preset Speed Number
See F523 for more information on this parameter

## Pattern Group 1 Selection 4

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Speeds
This parameter allows the user to select 1 of 15 configured Preset Speeds as the number 4 Selection to be included in Pattern Group 1.

Skip may be selected to ignore this Selection.
Setting
0 - Skip
1-15 Preset Speed Number
See F523 for more information on this parameter.

## Pattern Group 1 Selection 5

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Speeds

This parameter allows the user to select 1 of 15 configured Preset Speeds as the number 5 Selection to be included in Pattern Group 1.

Skip may be selected to ignore this Selection.
Setting
0 - Skip
1-15 Preset Speed Number
See F523 for more information on this parameter.

## Speed 1 Operation Time

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time
This parameter sets the run-time for Preset Speed 1.
This time is effective when used with Group Speeds and non-Group Speeds.
If the Auto-Restart function is activated, the search time required for the Auto-
Restart function will be subtracted from the Operation Time setting; resulting in a shorter run time.

## Speed 2 Operation Time

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time
This parameter sets the run-time for Preset Speed 2.
This time is effective when used with Group Speeds and non-Group Speeds.
If the Auto-Restart function is activated, the search time required for the Auto-
Restart function will be subtracted from the Operation Time setting; resulting in a shorter run time.

## Speed 3 Operation Time

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time
This parameter sets the run-time for Preset Speed 3.
This time is effective when used with Group Speeds and non-Group Speeds.
If the Auto-Restart function is activated, the search time required for the Auto-
Restart function will be subtracted from the Operation Time setting; resulting in a shorter run time.

## Speed 4 Operation Time

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time
This parameter sets the run-time for Preset Speed 4.
This time is effective when used with Group Speeds and non-Group Speeds.
If the Auto-Restart function is activated, the search time required for the Auto-
Restart function will be subtracted from the Operation Time setting; resulting in a shorter run time.

## Speed 5 Operation Time

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time
This parameter sets the run-time for Preset Speed 5.
This time is effective when used with Group Speeds and non-Group Speeds.
If the Auto-Restart function is activated, the search time required for the AutoRestart function will be subtracted from the Operation Time setting; resulting in a shorter run time.

## Speed 6 Operation Time

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time
This parameter sets the run-time for Preset Speed 6.
This time is effective when used with Group Speeds and non-Group Speeds.
If the Auto-Restart function is activated, the search time required for the AutoRestart function will be subtracted from the Operation Time setting; resulting in a shorter run time.

## Speed 7 Operation Time

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time
This parameter sets the run-time for Preset Speed 7.
This time is effective when used with Group Speeds and non-Group Speeds.
If the Auto-Restart function is activated, the search time required for the Auto-
Restart function will be subtracted from the Operation Time setting; resulting in a shorter run time.

## Speed 8 Operation Time

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time
This parameter sets the run-time for Preset Speed 8.
This time is effective when used with Group Speeds and non-Group Speeds.
If the Auto-Restart function is activated, the search time required for the Auto-
Restart function will be subtracted from the Operation Time setting; resulting in a shorter run time.

## Speed 9 Operation Time

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time
This parameter sets the run-time for Preset Speed 9
This time is effective when used with Group Speeds and non-Group Speeds.
If the Auto-Restart function is activated, the search time required for the Auto-
Restart function will be subtracted from the Operation Time setting; resulting in a shorter run time.

## Speed 10 Operation Time

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time
This parameter sets the run-time for Preset Speed 10
This time is effective when used with Group Speeds and non-Group Speeds.
If the Auto-Restart function is activated, the search time required for the Auto-
Restart function will be subtracted from the Operation Time setting; resulting in a shorter run time.

## Speed 11 Operation Time

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time
This parameter sets the run-time for Preset Speed 11
This time is effective when used with Group Speeds and non-Group Speeds.
If the Auto-Restart function is activated, the search time required for the AutoRestart function will be subtracted from the Operation Time setting; resulting in a shorter run time.

## Speed 12 Operation Time

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time
This parameter sets the run-time for Preset Speed 12
This time is effective when used with Group Speeds and non-Group Speeds.
If the Auto-Restart function is activated, the search time required for the AutoRestart function will be subtracted from the Operation Time setting; resulting in a shorter run time.

## Speed 13 Operation Time

Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time
This parameter sets the run-time for Preset Speed 13.
This time is effective when used with Group Speeds and non-Group Speeds.
If the Auto-Restart function is activated, the search time required for the Auto-
Restart function will be subtracted from the Operation Time setting; resulting in a shorter run time.

Speed 14 Operation Time
Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time
This parameter sets the run-time for Preset Speed 14.
This time is effective when used with Group Speeds and non-Group Speeds.
If the Auto-Restart function is activated, the search time required for the Auto-
Restart function will be subtracted from the Operation Time setting; resulting in a shorter run time.

Speed 15 Operation Time
Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Time
This parameter sets the run-time for Preset Speed 15.
This time is effective when used with Group Speeds and non-Group Speeds.
If the Auto-Restart function is activated, the search time required for the Auto-
Restart function will be subtracted from the Operation Time setting; resulting in a shorter run time.

Preset Speed Operation Mode
Program $\Rightarrow$ Pattern Run $\Rightarrow$ Operation Mode
This parameter is used to set the Preset Speed operating mode.
Select Disabled at this parameter to use the speed command only for Preset Speed operation.
Select Enabled at this parameter to apply the control settings of F561 - F575 to the associated Preset Speed while operating in the Preset Speed mode.

Settings:
0 — Disabled (Preset Speed Only)
1 - Enabled (Full Preset Speed Mode)

## Direct Access Number - F552

Parameter Type - Numerical

| Motor Overload Protection Level 1 | Direct Access Number - F600 |
| Program $\Rightarrow$ Fundamental $\Rightarrow$ Motor Set 1 | Parameter Type - Numerical <br> Factory Default - $\mathbf{1 0 0}$ |
| This parameter specifies the motor overload current level for Motor Set 1. This value is entered as either a percentage of the full load rating of the ASD or as a percentage of the FLA of the motor. | Changeable During Run - Yes <br> Minimum - 10 |
| The unit of measurement for this parameter may be set to $\mathbf{A} / \mathbf{V}$ (Amps) or it may be set as a percentage of the ASD rating. The nameplated FLA of the motor may be entered directly when Amps is selected as the unit of measurement (see F701 to change the display unit). | $\begin{aligned} & \text { Maximum - } 100.0 \\ & \text { Units - } \% \end{aligned}$ |
| Motor Overload Protection Level 1 settings will be displayed in Amps if the EOI display units are set to $\mathbf{A} / \mathbf{V}$ rather than \%. |  |
| Stall Prevention Level | Direct Access Number - F601 |
| Program $\Rightarrow$ Protection $\Rightarrow$ Stall | Parameter Type - Numerical <br> Factory Default - (ASD-Dependent) |
| This parameter specifies the output current level at which the output frequency is reduced in an attempt to prevent a trip. The over-current level is entered as a percentage of the maximum rating of the drive. | Changeable During Run - Yes <br> Minimum - 10 |
| Note: $\quad$ The Motor Overload Protection parameter must enabled at F017 to use this feature. | $\begin{aligned} & \text { Maximum - } 165 \\ & \text { Units - \% } \end{aligned}$ |
| Retain Trip Record at Power Down | Direct Access Number - F602 |
| Program $\Rightarrow$ Protection $\Rightarrow$ Trip Settings | Parameter Type - Selection List <br> Factory Default - Disabled |
| This parameter Enables/Disables the Trip Record Retention setting. When enabled, this feature logs the trip event and retains the trip information when the system powers down. The trip information may be viewed from the (Program $\Rightarrow$ Utilities $\Rightarrow$ ) Trip History screen or the Monitor screen. |  |
| When disabled, the trip information will be cleared when the system powers down. |  |
| Settings: |  |
| $\begin{aligned} & 0-\text { Disabled } \\ & 1-\text { Enabled } \end{aligned}$ |  |

## Emergency Off Mode Settings

Program $\Rightarrow$ Protection $\Rightarrow$ Emergency Off Settings

This parameter determines the method used to stop the motor in the event that an Emergency Off command is received and the system is configured to use this feature.

This setting may also be associated with the $\mathbf{F L}$ terminals to allow the $\mathbf{F L}$ relay to change states when an EOFF condition occurs by setting the FL terminal to Fault FL (all) (see F132).

Note: A supplemental emergency stopping system should be used with the ASD. Emergency stopping should not be a task of the ASD alone.

Settings:
0 - Coast Stop
1 - Deceleration Stop
2 - DC Injection Braking Stop
3 - Deceleration Stop (Decel 4 setting; F515)

## Emergency Off DC Injection Application Time <br> Program $\Rightarrow$ Protection $\Rightarrow$ Emergency Off Settings <br> When DC Injection is selected at F603 this parameter determines the time that the DC Injection Braking is applied to the motor.

## ASD Output Phase Failure Detection

Program $\Rightarrow$ Protection $\Rightarrow$ Phase Loss

This parameter Enables/Disables the monitoring of each phase of the 3-phase output signal ( $\mathrm{U}, \mathrm{V}$, or W ) of the ASD. If either line is missing, inactive, or not of the specified level for one second or more, the ASD incurs a trip.

Note: Autotune checks for phase failures regardless of this setting.

## Settings:

0 - Disabled (No Detection)
1 - Enabled (Run at Startup and Retry)
2 - Enabled (Every Run Command and Retry)
3 - Enabled (During Run)
4 - Enabled (At Startup And During Run)
5 - Enabled (Detects an ALL-PHASE Failure ONLY - Will Not Trip, Restarts At Reconnect)

Direct Access Number - F603
Parameter Type - Selection List
Factory Default - Coast Stop
Changeable During Run - No

## Direct Access Number - F604

Parameter Type - Numerical
Factory Default - 1.0
Changeable During Run - Yes
Minimum - 0.0
Maximum - 20.0
Units - Seconds
Direct Access Number - F605
Parameter Type - Selection List
Factory Default - Disabled
Changeable During Run - No

## Overload Reduction Starting Frequency

Program $\Rightarrow$ Protection $\Rightarrow$ Overload
This parameter is primarily used with V/f motors. It is used to reduce the starting frequency at which the Overload Reduction function begins and is useful during extremely low-speed motor operation.

During very low-speed operation the cooling efficiency of the motor decreases. Lowering the start frequency of the Overload Reduction function aides in minimizing the generated heat and precluding an Overload trip.
This function is useful in loads such as fans, pumps, and blowers that have the square reduction torque characteristic.
Set parameter F607 to the desired Overload Time Limit.

Motor 150\% Overload Time Limit
Program $\Rightarrow$ Protection $\Rightarrow$ Overload
This parameter establishes a time that the motor may operate at $150 \%$ of its rated current before tripping. This setting applies the time $/ 150 \%$ reference to the individual settings of each motor (e.g., this setting references $150 \%$ of the F600 setting for the 1 motor).

The unit will trip sooner than the time entered here if the overload is greater than $150 \%$.

## ASD Input Phase Failure Detection

Program $\Rightarrow$ Protection $\Rightarrow$ Phase Loss
This parameter enables the 3-phase input power phase loss detection feature. A loss of either input phase ( $\mathrm{R}, \mathrm{S}$, or T ) results in a trip.

## Settings:

0 — Disabled
1 - Enabled

## Low-Current Detection Current Hysteresis Width

Program $\Rightarrow$ Protection $\Rightarrow$ Low-Current Settings
During a momentary low-current condition, this parameter provides a current threshold level to which the low-current condition must return within the time setting of F612 or a Low-Current Trip will be incurred.

## Low-Current Trip

Program $\Rightarrow$ Protection $\Rightarrow$ Low-Current Settings
This parameter Enables/Disables the low-current trip feature.
When enabled, the drive will trip on a low-current fault if the output current of the drive falls below the level defined at F 611 and remains there for the time set at F612.

Settings:
0 — Disabled
1 - Enabled

Direct Access Number - F606

Factory Default - Disabled
Changeable During Run - No

## Low-Current Detection Threshold

Program $\Rightarrow$ Protection $\Rightarrow$ Low-Current Settings
With the Low-Current Trip (F610) parameter enabled, this function sets the low-current trip threshold.

The threshold value is entered as a percentage of the maximum rating of the drive.

## Low-Current Trip Threshold Time

Program $\Rightarrow$ Protection $\Rightarrow$ Low-Current Settings
With the Low-Current Trip (F610) parameter enabled, this function sets the time that the low-current condition must exist to cause a trip.

Short Circuit Detection At Start
Program $\Rightarrow$ Protection $\Rightarrow$ Special Protection Parameters
This parameter determines when the system will perform an Output Short Circuit test.

Note: Selection 3 is recommended for high-speed motor applications. Because of the low impedance of high-speed motors the standard-pulse setting may result in a motor malfunction.

Settings:
0 - Every Start (Standard Pulse)
1 - Power On or Reset (Standard Pulse)
2 - Every Start (Short Pulse)
3 - Power On or Reset (Short Pulse)

## Over-Torque Trip

Program $\Rightarrow$ Protection $\Rightarrow$ Over-Torque Parameters
This parameter Enables/Disables the Over-Torque Tripping function.
When enabled, the ASD trips if an output torque value greater than the setting of F616 or F617 exists for a time longer than the setting of F618.
When disabled, the ASD does not trip due to over-torque conditions.
Note: A discrete output terminal may be activated when an over-torque alarm occurs if so configured (see F130).

Settings:
0 - Disabled
1 - Enabled

## Direct Access Number - F611

Parameter Type - Numerical
Factory Default - $\mathbf{0}$
Changeable During Run - Yes

Changeable During Run - No

Direct Access Number - F615
Parameter Type - Selection List
Factory Default - Disabled
Changeable During Run - No

## Over-Torque Detection Level (Positive Torque)

Program $\Rightarrow$ Protection $\Rightarrow$ Over-Torque Parameters
This parameter sets the torque threshold level that is used as a setpoint for overtorque tripping during positive torque. This setting is a percentage of the maximum rated torque of the drive.

This function is enabled at F 615.

## Over-Torque Detection Level (Negative Torque)

Program $\Rightarrow$ Protection $\Rightarrow$ Over-Torque Parameters

This parameter sets the torque threshold level that is used as a setpoint for overtorque tripping during negative torque (regen). This setting is a percentage of the maximum rated torque of the drive.
This function is enabled at F 615 .

## Over-Torque Detection Time

Program $\Rightarrow$ Protection $\Rightarrow$ Over-Torque Parameters
This parameter sets the amount of time that the over-torque condition may exceed the tripping threshold level set at F616 and F617 before a trip occurs. This function is enabled at F 615.

## Over-Torque Detection Hysteresis

Program $\Rightarrow$ Protection $\Rightarrow$ Over-Torque Parameters
During a momentary over-torque condition, this parameter provides a torque threshold level to which the over-torque condition must return within the time setting of F618 or an Over-Torque Trip will be incurred.

Cooling Fan Control
Program $\Rightarrow$ Protection $\Rightarrow$ Special Protection Parameters
This parameter sets the cooling fan run-time command.
Settings:
$0-$ Automatic
1 - Always On

## Cumulative Operation Time Alarm

Program $\Rightarrow$ Protection $\Rightarrow$ Special Protection Parameters
This parameter sets a run-time value that, once exceeded, closes a discrete output contact. The output signal may be used to control external equipment or used to engage a brake.
Associate the Total-Operation-Hours Alarm setting of Table 8 on pg. 239 to a discrete output contactor.

Note: $\quad$ The time displayed is $1 / 10 \mathrm{th}$ of the actual time ( $0.1 \mathrm{hr} .=1.0 \mathrm{hr}$.).

## Abnormal Speed Detection Time <br> Program $\Rightarrow$ Protection $\Rightarrow$ Abnormal Speed Settings <br> This parameter sets the time that an overspeed condition must exist to cause a trip. <br> This parameter functions in conjunction with the settings of F623 and F624.

## Over-Speed Detection Frequency Upper Band

Program $\Rightarrow$ Protection $\Rightarrow$ Abnormal Speed Settings
This parameter sets the upper level of the Base Frequency range that, once exceeded, will cause an Over-Speed Detected alert.

This parameter functions in conjunction with the settings of F622 and F624.

## Over-Speed Detection Frequency Lower Band

Program $\Rightarrow$ Protection $\Rightarrow$ Abnormal Speed Settings
This parameter sets the lower level of the Base Frequency range that, once the output speed falls below this setting, will cause a Speed Drop Detected alert. This parameter functions in conjunction with the settings of F622 and F623.

## Over-Voltage Limit Operation Level

Program $\Rightarrow$ Protection $\Rightarrow$ Stall
This parameter sets the upper DC bus voltage threshold that, once exceeded, will cause an Over-Voltage Stall. An Over-Voltage Stall increases the output frequency of the drive during deceleration for a specified time in an attempt to prevent an Over-Voltage Trip.
If the over-voltage condition persists for over 4 mS , an Over-Voltage Trip will be incurred.

This parameter is enabled at F305.
Note: $\quad$ This parameter setting may increase deceleration times.

## Under-Voltage Trip

Program $\Rightarrow$ Protection $\Rightarrow$ Under-Voltage/Ridethrough
This parameter Enables/Disables the Under-Voltage Trip function.
With this parameter Enabled, the ASD will trip if the under-voltage condition persists for a time greater than the F628 setting.
A user-selected contact may be actuated if so configured.
If Disabled the ASD will stop and not trip; the FL contact is not activated.
Settings:

$$
\begin{aligned}
& 0 — \text { Disabled } \\
& 1 \text { —nabled }
\end{aligned}
$$

## Under-Voltage Trip Detection Time

Program $\Rightarrow$ Protection $\Rightarrow$ Under-Voltage/Ridethrough
This parameter sets the time that the under-voltage condition must exist to cause an Under-Voltage Trip.

This parameter is enabled at F627.

## Regenerative Power Ridethrough Control Level

Program $\Rightarrow$ Protection $\Rightarrow$ Under-Voltage/Ridethrough
This parameter is activated during regeneration. It is used to set the low end of the DC bus voltage threshold that, once the bus voltage drops below this setting, activates the setting of F302 (Ridethrough Mode).

Activation may be the result of a momentary power loss or an excessive load on the bus voltage.
During a Ridethrough, regenerative energy is used to maintain the control circuitry settings for the duration of the Ridethrough; it is not used to drive the motor.

The motor(s) of the system are stopped and then restarted automatically or may continue seamlessly if so configured.
See F302 for more information on this parameter
Note: This parameter setting may increase deceleration times.

## Brake Answer Wait Time

Program $\Rightarrow$ Protection $\Rightarrow$ Special Protection Parameters
This parameter is used in conjunction with the discrete input terminal setting Brake Answerback Input (see Table 5 on pg. 234 for more information on this feature).

After activating the discrete input terminal Braking Request, the setting of this parameter starts a count-down timer in which 1) a Brake Answerback Input response must be received or 2 ) the brake must release before the timer expires.

Should this timer setting expire before the Brake Answerback Input is returned or the brake releases, a Brake Fault (E-11) is incurred. Otherwise, the brake releases and normal motor operations resume.

## ASD Overload

Program $\Rightarrow$ Protection $\Rightarrow$ Overload
This parameter is used to protect the ASD from an over-current condition. The standard overload rating of the G9 ASD is $150 \%$ operation for 60 seconds.

This setting allows for the overload protection to be switched from the standard overload detection means (Thermal Detection and Overload) to thermal detection only.

Settings:
0 - Thermal Detection + Overload
1 - Thermal Detection Only

The Thermal Detection Only selection is used when multiple devices are installed horizontally as described on pg. 15 .

#### Abstract

VI/II (V/I) Analog Input Broken Wire Detection Level Program $\Rightarrow$ Terminal $\Rightarrow$ Input Special Functions This parameter is enabled by providing a non-zero value here. This function monitors the $\mathbf{V} / \mathbf{I}$ input signal and if the $\mathbf{V} / \mathbf{I}$ input signal falls below the level specified here and remains there for a period of 0.3 seconds or more a trip will be incurred (E-18).

This value is entered as $0 \%$ to $100 \%$ of the $\mathbf{V} / \mathbf{I}$ input signal range.

## Annual Average Ambient Temperature

Program $\Rightarrow$ Special $\Rightarrow$ Special Parameters

This parameter is used in conjunction with a discrete output terminal setting to notify the operator of the remaining useful life of critical components of the ASD system.

With a discrete output terminal set to Part Replacement Alarm (see Table 8 on pg. 239) and the calculation derived from the parameter setting, maintenance scheduling may be enhanced.

## Settings:

1 - Under $10^{\circ} \mathrm{C}\left(50^{\circ} \mathrm{F}\right)$
2 - Under $20^{\circ} \mathrm{C}\left(68^{\circ} \mathrm{F}\right)$
3 - Under $30^{\circ} \mathrm{C}\left(86^{\circ} \mathrm{F}\right)$
4 - Under $40^{\circ} \mathrm{C}\left(104^{\circ} \mathrm{F}\right)$
5 - Under $50^{\circ} \mathrm{C}\left(122^{\circ} \mathrm{F}\right)$
6 - Under $60^{\circ} \mathrm{C}\left(140^{\circ} \mathrm{F}\right)$

## Rush Relay Current Activation Time

Program $\Rightarrow$ Special $\Rightarrow$ Special Parameters $\Rightarrow$ Rush Relay Current Activation Time

At system startup, this parameter sets a time-delay for the start of the Rush Relay activation in an attempt to allow the DC bus voltage to reach the normal operating level before outputting a signal to the motor.

## PTC1 Thermal Selection

Program $\Rightarrow$ Special $\Rightarrow$ Special Parameters $\Rightarrow$ PTC1 Thermal Selection
This parameter Enables/Disables the optional external thermal detection circuit of the Expansion IO Card Option 1. A thermistor is connected from TH1+ to TH1- of TB3 on the Expansion IO Card Option 1.

Should the thermistor resistance reading fall below $50 \Omega$ because of an overtemperature condition or exceed $3000 \Omega$ because of an open circuit an External Thermal Fault (OH2) will be incurred.

Note: While this parameter is Enabled, the system cannot be restarted until the thermistor value recovers to the level of $1.8 \mathrm{k} \Omega$ from an over-temperature condition. An Auto-Restart will not be initiated subsequent to an External Thermal Trip (OH2). A manual restart will be required in the event of an $\mathbf{O H 2}$ trip.

## PTC2 Thermal Selection

Program $\Rightarrow$ Special $\Rightarrow$ Special Parameters $\Rightarrow$ PTC2 Thermal Selection
This parameter Enables/Disables the optional external thermal detection circuit of the Expansion IO Card Option 2. A thermistor is connected from TH1+ to TH1- of TB4 on the Expansion IO Card Option 2.

Should the thermistor resistance reading fall below $50 \Omega$ because of an overtemperature condition or exceed $3000 \Omega$ because of an open circuit an External Thermal Fault (OH2) will be incurred.

Note: While this parameter is Enabled, the system cannot be restarted until the thermistor value recovers to the level of $1.8 k \Omega$ from an over-temperature condition. An Auto-Restart will not be initiated subsequent to an External Thermal Trip (OH2). A manual restart will be required in the event of an $\mathbf{O H 2}$ trip.

Settings:
0 — Disabled
1 - Detect Disconnect

## Braking Resistance Overload Time (10x rated torque) <br> Program $\Rightarrow$ Protection $\Rightarrow$ Dynamic Braking <br> This parameter sets the time that the braking resistor is allowed to sustain and overload condition before a trip is incurred. <br> This feature is useful for applications that have a fluctuating load or for loads that require a long deceleration time.

## Step-Out Current Detection Level

Program $\Rightarrow$ Motor $\Rightarrow$ PM Motor

This parameter is used with synchronous motor applications only.
Contact the Toshiba Customer Support Center for information on this parameter.

## Step-Out Current Detection Time

Program $\Rightarrow$ Motor $\Rightarrow$ PM Motor
This parameter is used with synchronous motor applications only.
Contact the Toshiba Customer Support Center for information on this parameter.

## Selection of OUT Terminal

Program $\Rightarrow$ Terminal $\Rightarrow$ Analog Output Terminals

This parameter is used to enable the OUT1 and OUT2 output terminals, or the FP output terminal by selecting Logic Output or Pulse Train Output, respectively.

## Note: The Logic output and the Pulse Train output may not be used

 simultaneously.If Logic Output is selected the OUT1 and OUT2 (O1A/O1B and O2A/O2B) output contacts of the Terminal Board are enabled to function as described in parameter F130.

The OUT1 and OUT2 terminals may be used simultaneously and they may be assigned different functions.

If Pulse Train Output is selected the FP output terminal of the Terminal Board is enabled to function as configured in F676 and F677.

## Settings:

0 - Logic Output
1 - Pulse Train Output

## AM Output Terminal Function

Program $\Rightarrow$ Terminal $\Rightarrow$ Analog Output Terminals
This parameter is used to set the output function of the AM analog output terminal. The AM analog output terminal produces an output current that is proportional to the magnitude of the function assigned to this terminal. The available assignments for this output terminal are listed in Table 6 on pg. 237.

Note: To read current at this terminal connect a 100 - $500 \Omega$ resistor from the $\boldsymbol{A M}(+)$ terminal through the series Ammeter to the $\boldsymbol{C C}$ (-) terminal.

## AM Terminal Setup Parameters

F670 - Set AM Function
F671 - Calibrate AM Terminal
F685 - Output Response Polarity Selection
F686 - Set Zero Level

## AM Output Terminal Adjustment

Program $\Rightarrow$ Terminal $\Rightarrow$ Analog Output Terminals

This parameter is used to calibrate the $\mathbf{A M}$ analog output.
To calibrate the AM analog output, connect an ammeter as described at parameter F670.
With the drive is running at a known value (e.g., output frequency), adjust this parameter until the associated function of parameter F670 produces the desired DC level output at the AM output terminal.

See F670 for more information on this setting.

## MON1 Terminal Meter Selection

Program $\Rightarrow$ Terminal $\Rightarrow$ Analog Output Terminals
This parameter is used to set the output function of the MON1 analog output terminal. The available assignments for this output terminal are listed in Table 6 on pg. 237

The MON1 analog output terminal produces an output voltage or current that is proportional to the magnitude of the function assigned to this terminal.

## Note: $\quad$ The Expansion IO Card Option 2 option board (P/N ETB004Z) is required to use this terminal.

See the Expansion IO Card Option 2 Instruction Manual (P/N 58686) for more information on the function of this terminal.

## MON1 Terminal Setup Parameters

F672 - MON1 Output Function
F673 - MON1 Terminal Meter Adjustment
F688 - MON1 Voltage/Current Output Switching
F689 - MON1 Output Gradient Characteristic
F690 - MON1 Bias Adjustment Set Zero Level

## MON1 Terminal Adjustment

Program $\Rightarrow$ Terminal $\Rightarrow$ Analog Output Terminals
This parameter is used to set the gain of the MON1 output terminal and is used in conjunction with the settings of parameter F672.

See parameter F672 for more information on this setting.

## MON2 Terminal Meter Selection

Program $\Rightarrow$ Terminal $\Rightarrow$ Analog Output Terminals

This parameter is used to set the output function of the MON2 analog output terminal. The available assignments for this output terminal are listed in Table 6 on pg. 237

The MON2 analog output terminal produces an output voltage or current that is proportional to the magnitude of the function assigned to this terminal.

Note: $\quad$ The Expansion IO Card Option 2 option board ( $P / N$ ETB004Z) is required to use this terminal.

See the Expansion IO Card Option 2 Instruction Manual (P/N 58686) for more information on the function of this terminal

MON2 Terminal Setup Parameters

## MON2 Terminal Adjustment

Program $\Rightarrow$ Terminal $\Rightarrow$ Analog Output Terminals

This parameter is used to set the gain of the MON2 output terminal and is used in conjunction with the settings of parameter F674.

See parameter F674 for more information on this setting.

## Pulse Output Function (FP)

Program $\Rightarrow$ Terminal $\Rightarrow$ Analog Output Terminals

This parameter sets the functionality of the FP output terminal to any one of the user-selectable functions listed in Table 8 on pg. 239 and is enabled at parameter F669.

As the assigned function changes in magnitude or frequency, the pulse count of the FP output terminal pulse train changes in direct proportion to changes in the assigned function.

Note: $\quad$ The duty cycle of the output pulse train remains at $65 \pm 5.0 \mu S$.
This parameter is used in conjunction with parameter F669 and F677.

## Pulse Output Frequency (FP)

Program $\Rightarrow$ Terminal $\Rightarrow$ Analog Output Terminals

This parameter scales the $\mathbf{F P}$ output terminal by setting the pulses-per-second output signal of the FP terminal.

See F676 for more information on this parameter.

## FM Voltage/Current Output Switching

Program $\Rightarrow$ Terminal $\Rightarrow$ Analog Output Terminals

This parameter is used to select the type of output signal provided at the FM terminal (i.e., voltage or current).

The output voltage and current range is $0-10 \mathrm{VDC}$ and $0-20 \mathrm{~mA}$, respectively.

See F005 for more information on this setting.

Settings:

$$
\begin{aligned}
& 0-0-10 \mathrm{~V} \\
& 1-0-20 \mathrm{~mA}
\end{aligned}
$$

## FM Output Gradient Characteristic

Program $\Rightarrow$ Terminal $\Rightarrow$ Analog Output Terminals
This parameter sets the output response polarity of the FM output terminal. The FM output terminal response may be set to respond inversely (-) or directly (+) to the input signal.

See F005 for more information on this setting.
Settings:
$0-$ Minus (Negative Gradient)
1 - Plus (Positive Gradient)

## Display Units for Voltage and Current <br> Program $\Rightarrow$ Utilities $\Rightarrow$ Display Parameters

This parameter sets the unit of measurement for current and voltage values displayed on the EOI

Settings:
$0-\%$
1 - $\mathrm{A} / \mathrm{V}$

## Display Unit Multiplication Factor

Program $\Rightarrow$ Utilities $\Rightarrow$ Display Parameters
This parameter provides a multiplier for the displayed speed value shown on the front panel display of the ASD

This parameter may be used to display the rate that a commodity is being processed by the driven load in process units (i.e., units/time).

Example: An output frequency of 100 Hz would be displayed as 50 Hz if using a multiplier of 0.5 for this parameter.

Note: $\quad$ PID frequency-limiting parameters are not affected by this setting (i.e., F364, F365, F367, and F368).

## Display Unit Selection

Program $\Rightarrow$ Utilities $\Rightarrow$ Display Parameters
This parameter is used in conjunction with F702 to set the method in which the frequency is displayed on the front panel.

The multiplier setting of F 702 will be applied to the display of all frequencies if All Frequencies are selected at this parameter.

The multiplier setting of F702 will be applied to parameters F364, F365, F367, and F368 ONLY if PID Process Data is selected at this parameter.

Settings:
0 - All Frequencies
1 - PID Process Data

## Display Gradient Characteristic

Program $\Rightarrow$ Utilities $\Rightarrow$ Display Parameters
The ASD-displayed response to output speed changes will be displayed as directly proportional or inversely proportional as a function of this parameter setting.

Selecting Negative Gradient displays an increased output speed as going more negative.

Selecting Positive Gradient displays an increased output speed as going more positive.

Settings:
0 - Minus (Negative Gradient)
1 - Plus (Positive Gradient)

Direct Access Number - F701

## Display Bias

Program $\Rightarrow$ Utilities $\Rightarrow$ Display Parameters
In conjunction with the setting of F702, this parameter sets the bias of the front panel speed display.

The frequency entered here will be multiplied by the setting of F702 and then displayed as the zero value on the front panel display.

## Change Step Selection 1

Program $\Rightarrow$ Utilities $\Rightarrow$ Display Parameters
In conjunction with the parameter setting of F708, this parameter sets the amount that the output speed will increase or decrease for each speed command change entered from the front panel using the Rotary Encoder.

## Change Step Selection 2

Program $\Rightarrow$ Utilities $\Rightarrow$ Display Parameters
The parameter is used to modify the degree that the setting of F707 affects the output speed changes that are input from the front panel using the Rotary Encoder.

Selecting a zero value here disables this parameter and the resulting non-zero value of parameter setting F707 is output from the ASD.
Selecting a non-zero value here provides a dividend that will be used in the following equation resulting in the actual output frequency applied to the motor.

OutputFrequencyDisplayed $=$ InternallyCommandedFrequency $\times \frac{F 708}{F 707}$

## Operation Command Clear Selection When ST Off

Program $\Rightarrow$ Special $\Rightarrow$ Operation Panel Parameters
Upon deactivation of the $\mathbf{S T}$ terminal while operating in the Local mode, the ASD output to the motor will cease - this parameter setting is used to allow for the reactivation of the motor without user intervention upon the reactivation of the $\mathbf{S T}$ terminal.

Upon reactivation of the ST terminal in this condition the ASD will resume the Run condition and the motor will start ( $\mathbf{1}$ - Retain Run Command).

This feature may be Disabled and the Run command must be re-initiated by the user for ASD operation ( $\mathbf{0}$ - Clear Panel Run Command).

## 4 DANGER

## WHEN ENABLED THE ASD WILL RESUME THE RUN CONDITION WHEN THE ST TERMINAL IS REACTIVATED.

## Settings:

## Panel Stop Pattern

Program $\Rightarrow$ Special $\Rightarrow$ Operation Panel Parameters
While operating in the Local mode this parameter determines the method used to stop the motor when the stop command is issued via the EOI.

The Decel Stop setting enables the Dynamic Braking system that is setup at F304 or the DC Injection Braking system that is setup at F250, F251, and F252.

The Coast Stop setting allows the motor to stop at the rate allowed by the inertia of the load.

Settings:
0 - Deceleration Stop
1 - Coast Stop
Note: The Stop Pattern setting has no effect on the Emergency Off settings of F603. This parameter may also be accessed by pressing the ESC key from the Frequency Command screen.

## Panel Torque Command

Program $\Rightarrow$ Special $\Rightarrow$ Operation Panel Parameters

This function is not used with the G9 ASD.
The Torque Command selection is performed at F420.

## Panel Tension Torque Bias

Program $\Rightarrow$ Special $\Rightarrow$ Operation Panel Parameters
This function is not used with the G9 ASD.
The Tension Torque Bias selection is performed at F423.

Panel Load Sharing Gain
Program $\Rightarrow$ Special $\Rightarrow$ Operation Panel Parameters
This function is not used with the G9 ASD.
The Load Sharing Gain selection is performed at F424.

## Panel Override Multiplication Gain

Program $\Rightarrow$ Special $\Rightarrow$ Operation Panel Parameters
This parameter provides a value to be used in the event that Setting (F729) is selected for the Frequency Override Multiplying Input (F661).

## Trace Selection

Program $\Rightarrow$ Utilities $\Rightarrow$ Trace
In conjunction with parameter F741-F745, this parameter is used to monitor and store 4 ASD output waveform data points. The data may be read and stored as a function of a trip (At Trip) or it may be initiated by the activation of a discrete terminal activation (At Trigger).
Set a discrete input terminal to Trace Back Trigger Signal and activate the terminal to initiate the At Trigger read/store function.
Table 10 on pg. 241 lists the items that may be selected for the data read/store function along with the associated communication number for each selection.
The duration of the read/store cycle for the selected items is set at parameter F741.
To acquire and store the data a communications device and a PC are required. The G9 ASD supports the following communications protocols: RS485 (MODBUS-RTU) Toshiba Protocol, USB Toshiba Protocol, CC-Link, ProfiBus, and DeviceNet (Refer to the manual of each protocol type for more information).
Trace data may be viewed graphically via Program $\Rightarrow$ Utilities $\Rightarrow$ View Trace Data.

Settings:
0 - None (Disabled)
1 - At Trip
2 - At Trigger

## Trace Cycle

Program $\Rightarrow$ Utilities $\Rightarrow$ Trace
This parameter sets the record time for the Trace Data events selected at F742 - F745.

See F740 for more information on this parameter setting.

Program $\Rightarrow$ Utilities $\Rightarrow$ Trace Data 3
This parameter is used to select the Trace Data $\mathbf{3}$ item from Table 9 on pg. 240 to be read and stored in accordance with the setup of parameters F740 and F741

See F740 for more information on this parameter setting.
Trace Data 4
Program $\Rightarrow$ Utilities $\Rightarrow$ Trace Data 4
This parameter is used to select the Trace Data 4 item from Table 9 on pg. 240 to be read and stored in accordance with the setup of parameters F740 and F741

See F740 for more information on this parameter setting.

## RS485 2-Wire Baud Rate

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings
This parameter plays a role in the setup of the communications network by establishing the Baud Rate of the communications link.

The communications network includes other ASDs and Host/Control computers that monitor the status of the ASD(s), transfers commands, and loads or modifies the parameter settings of the ASD.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Settings:
0 - 9600
1 - 19200
2-38400

## RS485 2- and 4-Wire Parity

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings
This parameter plays a role in the setup of the communications network by establishing the Parity setting of the communications link

The communications network includes other ASDs and Host/Control computers that monitor the status of the ASD(s), transfers commands, and loads or modifies the parameter settings of the ASD.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect

## ASD Number

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings
This parameter plays a role in the setup of the communications network by assigning an identification (ID) number to each ASD in the communications network.

The communications network includes other ASDs and Host/Control computers that monitor the status of the $\operatorname{ASD}(\mathrm{s})$, transfers commands, and loads or modifies the parameter settings of the ASD.
Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect

## Communications Time Out Time

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings
This parameter plays a role in the setup of the communications network by setting the time that no activity may exist over the communications link before the link is severed (Time Out).

The communications network includes other ASDs and Host/Control computers that monitor the status of the $\operatorname{ASD}(\mathrm{s})$, transfers commands, and loads or modifies the parameter settings of the ASD.
Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect

## RS485 2- and 4-Wire Communications Time-Out Action

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings

This parameter plays a role in the setup of the communications network by determining the action to be taken in the event of a time-out (Time-Out Action).

The communications network includes other ASDs and Host/Control computers that monitor the status of the ASD(s), transfers commands, and loads or modifies the parameter settings of the drive.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect

## Settings:

(Settings Are For 2-Wire/4-Wire)
0 - No Action/No Action
1 - Alarm/No Action
2 - Trip/No Action
3 - No Action/Alarm
4 - Alarm/Alarm
5 - Trip/Alarm
6 - No Action/Trip
7 - Alarm/Trip
8 - Trip/Trip

Direct Access Number - F802

Changeable During Run - Yes
Minimum - 0 (Off)
Maximum - 100
Units - Seconds

Direct Access Number - F804
Parameter Type - Selection List
Factory Default - Trip/Trip
Changeable During Run - Yes

## RS485 2-Wire Send Wait Time

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings
This parameter sets the RS485 2-Wire response delay time.
Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

## RS485 2-Wire ASD-to-ASD Communications

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings
The function of this parameter is 2-fold:

1) In a Master/Follower configuration and while communicating via RS485 2-Wire, this parameter sets the ASD as the Master or the Follower.
2) This parameter determines the function of the ASD while operating as the Master or the Follower. If operating as the Master ASD, an output parameter of the Master ASD is used to control the Follower ASDs and is set here. If operating as a Follower ASD, the ASD response if an error is incurred is set here.

Note: Select a Follower function here if F826 is configured as a Master Output controller for any other ASD in the system. Otherwise, an EOI failure will result.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

## Settings:

0 - Follower (Decel Stop If Error Detected)
1 - Follower (Continues Operation If Error Detected)
2 - Follower (Emergency Off If Error Detected)
3 - Master (Frequency Command)
4 - Master (Output Frequency)
5 - Master (Torque Reference)
6 - Master (Torque Command)

Direct Access Number - F807
Parameter Type - Selection List
Factory Default - Toshiba
Changeable During Run - Yes

## Frequency Point Selection

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Reference Adjust

This parameter is used to set the communications reference for scaling.
See F811 - F814 for more information on this setting

## Note: $\quad$ Scaling the communications signal is not required for all

 applications.Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect

Settings:
0 - Disabled
1 - RS485 (2-Wire - NOT USED)
2 - RS485 4-Wire
3 - Communication Card

## Point 1 Setting

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Reference Adjust
When enabled at F 810 , this parameter is used to allow the user to set the gain and bias of the speed control input to the drive when the speed control signal is received via the source selected at F 810 .

## Gain and Bias Settings

When operating in the Speed Control mode and using one of the control sources from Settings above, the settings that determine the gain and bias properties of the input signal are:

- Communications Reference Speed Setpoint 1 (frequency) (F812),
- the communications input signal value that represents Communications Reference Speed Setpoint 1 (frequency): F811,
- Communications Reference Speed Setpoint 2 (frequency) (F814), and
- the communications input signal value that represents Communications Reference Speed Setpoint 2 (frequency): F813

Once set, as the input signal value changes, the output frequency of the drive will vary in accordance with the above settings.

This parameter sets the Communications Reference input value that represents Communications Reference Speed Setpoint 1 (frequency). This value is entered as 0 to $100 \%$ of the Communications Reference input value range. Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect

## Point 1 Frequency

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Reference Adjust
This parameter is used to set the gain and bias of the Communications Reference speed control input.
See F811 for more information on this setting
This parameter sets Communications Reference Speed Setpoint 1.
Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Minimum - 0.00
Maximum - 2.00
Units - Seconds

## RS485 ASD-to-ASD Communications

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings
The function of this parameter is 2-fold:

1) In a Master/Follower configuration and while communicating via RS485 4-Wire, this parameter sets the ASD as the Master or the Follower.
2) This parameter determines the function of the ASD while operating as the Master or the Follower. If operating as the Master ASD, an output parameter of the Master ASD is used to control the Follower ASDs and is set here. If operating as a Follower ASD, the ASD response if an error is incurred is set here.

Note: $\quad$ Select a Follower function here if $\mathbf{F 8 0 6}$ is configured as a Master Output controller for any other ASD in the system. Otherwise, an EOI failure will result.

Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

## Settings:

0 - Follower (Decel Stop If Error Detected)
1 - Follower (Continues Operation If Error Detected)
2 - Follower (Emergency Off If Error Detected)
3 - Master (Frequency Command)
4 - Master (Output Frequency)
5 - Master (Torque Reference)
6 - Master (Output Torque)

## RS485 Protocol Selection (TSB/ModBus)

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings
This parameter sets the communications protocol for ASD-to-ASD communications.

Settings:
0 — Toshiba
1 - Modbus

## Communications Option (DeviceNet/Profibus) Setting 1

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings
While using the DeviceNet/Profibus communications protocol, this parameter allows the user to select the read and write information communicated between the ASD and the Host.
Read information may include the ASD fault status, ASD speed, ASD MAC ID, etc. Write information may include Enable/Disable DeviceNet commands, Forward run, ACC/DEC command, etc.

See the DeviceNet Option Instruction Manual (P/N 58683) for more information on this parameter.

Settings:
0-7

Direct Access Number - F826

## Communications Option Speed Switch Monitor DeviceNet/ CC-Link

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings
This parameter is used in the setup of the communications network by reading the hardware-specific settings of the option card being used with the ASD.

If using the DEV002Z Devicenet card, this parameter reads the hardware switch SW300 setting of the Devicenet card. SW300 sets the baud rate and the MAC address of the option card that is connected to a node of the communications system.

See the DeviceNet Option Instruction Manual (P/N 58683) for more information on this parameter or see the Instruction manual for the option being used with the G9 ASD.

## Block Write Data 1

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings
This parameter plays a role in the setup of the communications network by establishing the type of data to be written to the ASD of the communications link.

The communications network includes other ASDs and Host/Control computers that monitor the status of the ASD(s), transfers commands, and loads or modifies the parameter settings of the ASD.
Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

## Settings:

0 - None
1 - FA00 (Command 1)
2 - FA20 (Command 2)
3 - FA01 (Frequency)
4 - FA50 (TB output)
5 - FA51 (Analog Output)

## Block Write Data 2

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings
This parameter plays a role in the setup of the communications network by establishing the type of data to be written to the ASD of the communications link.

The communications network includes other ASDs and Host/Control computers that monitor the status of the $\operatorname{ASD}(\mathrm{s})$, transfers commands, and loads or modifies the parameter settings of the ASD.
Changes made to this parameter require that the power be cycled (off then on) for the changes to take effect.

Settings:
$0-$ None
1 - FA00 (Command 1)
2 - FA20 (Command 2)
3 - FA01 (Frequency)
4- FA50 (TB output)
5 - FA51 (Analog Output)

## Block Read Data 4

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings
This parameter plays a role in the setup of the communications network by establishing the type of data to be read from the ASD of the communications link.

See parameter F875 for more information on this setting.

## Block Read Data 5

Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings
This parameter plays a role in the setup of the communications network by establishing the type of data to be read from the ASD of the communications link.

See parameter F875 for more information on this setting.
Free Notes
Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings

This is an unused parameter that has allocated memory space.
The space may be used at the discretion of the user.This space may be used to store information or a note to be transferred using communications.

## Network Option Reset Settings <br> Program $\Rightarrow$ Communications $\Rightarrow$ Communication Settings

This parameter plays a role in the setup of the communications network by establishing the targets of a Reset command received via the communications link.

Settings:
0 - Reset ASD only
1 - Reset Option Board and ASD

## Input Function Target 1

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 1
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 1 terminal.
This setting assigns the function of the programmable Input Function Target $\mathbf{1}$ terminal to any one of the user-selectable functions listed in Table 7 on pg . 238 , Table 8 on pg. 239, or Table 10 on pg. 241.
See F977 for more information on this parameter.

## Input Function Command 1 <br> Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 1

This parameter is used to assign a user-selected logical operator to two userselected Input Function Target variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg . 243 lists the available selections. Their use and selection requirements are described in an example at F 977.

## Input Function Target 2

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 1

This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 2 terminal.

This setting assigns the function of the programmable Input Function Target $\mathbf{2}$ terminal to any one of the user-selectable functions listed in Table 7 on pg . 238 , Table 8 on pg. 239, or Table 10 on pg. 241
See F977 for more information on this parameter.

## Input Function Command 2

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 1
This parameter is used to assign a user-selected logical operator to two userselected Input Function Target variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg . 243 lists the available selections. Their use and selection requirements are described in an example at F977.

## Input Function Target 3

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 1

This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 3 terminal.

This setting assigns the function of the programmable Input Function Target 3 terminal to any one of the user-selectable functions listed in Table 7 on pg. 238 , Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

## Output Function Assigned

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 1
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the Output Function Assigned terminal.

This setting assigns the function of the programmable Output Function Assigned data location to one of the functions listed in the Input Setting field of Table 7 on pg. 238.

Settings:

$$
0-3099
$$

See the My Function Instruction Manual (P/N E6581335) and F977 for more information on this parameter.

## Input Function Target 1

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 2
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 1 terminal.

This setting assigns the function of the programmable Input Function Target $\mathbf{1}$ terminal to any one of the user-selectable functions listed in Table 7 on pg . 238, Table 8 on pg. 239, or Table 10 on pg. 241.
See F977 for more information on this parameter.

## Input Function Command 1

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 2
This parameter is used to assign a user-selected logical operator to two userselected Input Function Target variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg . 243 lists the available selections. Their use and selection requirements are described in an example at F977.

## Input Function Target 2

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 2

This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 2 terminal.

This setting assigns the function of the programmable Input Function Target $\mathbf{2}$ terminal to any one of the user-selectable functions listed in Table 7 on pg. 238 , Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

## Input Function Command 2

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 2
This parameter is used to assign a user-selected logical operator to two userselected Input Function Target variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg . 243 lists the available selections. Their use and selection requirements are described in an example at F977.

Input Function Target 3
Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 2
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 3 terminal.

This setting assigns the function of the programmable Input Function Target 3 terminal to any one of the user-selectable functions listed in Table 7 on pg. 238 , Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

## Output Function Assigned

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 2
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the Output Function Assigned terminal.

This setting assigns the function of the programmable Output Function Assigned data location to one of the functions listed in the Input Setting field of Table 8 on pg. 239.

Settings:

$$
0-3099
$$

See the My Function Instruction Manual (P/N E6581335) and F977 for more information on this parameter.

## Input Function Target 1

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 3

This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 1 terminal.

This setting assigns the function of the programmable Input Function Target 1 terminal to any one of the user-selectable functions listed in Table 7 on pg. 238 , Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

Input Function Command 1
Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 3
This parameter is used to assign a user-selected logical operator to two userselected Input Function Target variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg . 243 lists the available selections. Their use and selection requirements are described in an example at F977.

## Input Function Target 2

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 3
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 2 terminal.

This setting assigns the function of the programmable Input Function Target 2 terminal to any one of the user-selectable functions listed in Table 7 on pg. 238 , Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

## Input Function Command 2

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 3
This parameter is used to assign a user-selected logical operator to two userselected Input Function Target variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg . 243 lists the available selections. Their use and selection requirements are described in an example at F977.

## Input Function Target 3

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 3

This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 3 terminal.

This setting assigns the function of the programmable Input Function Target 3 terminal to any one of the user-selectable functions listed in Table 7 on pg. 238 , Table 8 on pg. 239, or Table 10 on pg. 241
See F977 for more information on this parameter

## Output Function Assigned

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 3
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the Output Function Assigned terminal.
This setting assigns the function of the programmable Output Function Assigned data location to one of the functions listed in the Input Setting field of Table 8 on pg. 239.

Settings:

$$
0-3099
$$

See the My Function Instruction Manual (P/N E6581335) and F977 for more information on this parameter.

## My Function Percent Data 1

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data
This parameter is used to set the trigger threshold level of the analog signal of the My Function Percent Data 1.

The analog signal is selected using the Input Setting number from Table 8 on pg. 239.
Once the assigned output value reaches the threshold setting of this parameter the output value is transferred to My Function Out 1.

See the My Function Instruction Manual (P/N E6581335) and F977 for more information on this parameter.

## My Function Percent Data 2 <br> Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data

This parameter is used to set the trigger threshold level of the analog signal of the My Function Percent Data 2.

The analog signal is selected using the Input Setting number from Table 8 on pg. 239.

## Direct Access Number - F916 <br> Parameter Type - Selection List <br> Factory Default - 0 (Disabled)

## My Function Percent Data 3 <br> Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data

This parameter is used to set the trigger threshold level of the analog signal of the My Function Percent Data 3.

The analog signal is selected using the Input Setting number from Table 8 on pg. 239.

## My Function Percent Data 4 <br> Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data

This parameter is used to set the trigger threshold level of the analog signal of the My Function Percent Data 4.

The analog signal is selected using the Input Setting number from Table 8 on pg. 239.

## My Function Percent Data 5

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data
This parameter is used to set the trigger threshold level of the analog signal of the My Function Percent Data 5.

The analog signal is selected using the Input Setting number from Table 8 on pg. 239.

## My Function Frequency Data 1 <br> Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data

This parameter is used to set the trigger threshold level of the analog signal of the My Function Frequency Data 1.

The analog signal is selected using the Input Setting number from Table 8 on pg. 239.

## My Function Frequency Data 2

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data
This parameter is used to set the trigger threshold level of the analog signal of the My Function Frequency Data 2.
The analog signal is selected using the Input Setting number from Table 8 on pg. 239.

## My Function Frequency Data 3

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data
This parameter is used to set the trigger threshold level of the analog signal of the My Function Frequency Data 3.
The analog signal is selected using the Input Setting number from Table 8 on pg. 239.

## My Function Frequency Data 4 <br> Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data

This parameter is used to set the trigger threshold level of the analog signal of the My Function Frequency Data 4.

The analog signal is selected using the Input Setting number from Table 8 on pg. 239.

## My Function Frequency Data 5 <br> Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data

This parameter is used to set the trigger threshold level of the analog signal of the My Function Frequency Data 5.
The analog signal is selected using the Input Setting number from Table 8 on pg. 239.

## My Function Time Data 1

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data
This parameter is used to set the response delay of the My Function Time Data 1 terminal.

The applied discrete input signal must be present at the input terminal of the G9 ASD for the time setting here for a system response.
Discrete terminal input activation that does not equal or exceed this setting will be ignored.

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data
This parameter is used to set the response delay of the My Function Time Data 2 terminal.
The applied discrete input signal must be present at the input terminal of the G9 ASD for the time setting here for a system response.
Discrete terminal input activation that does not equal or exceed this setting will be ignored.

> My Function Time Data 3
> Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data

This parameter is used to set the response delay of the My Function Time Data 3 terminal.

The applied discrete input signal must be present at the input terminal of the G9 ASD for the time setting here for a system response.
Discrete terminal input activation that does not equal or exceed this setting will be ignored.

## My Function Time Data 4

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data
This parameter is used to set the response delay of the My Function Time Data 4 terminal.

The applied discrete input signal must be present at the input terminal of the G9 ASD for the time setting here for a system response.

Discrete terminal input activation that does not equal or exceed this setting will be ignored.

## My Function Time Data 5

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data
This parameter is used to set the response delay of the My Function Time Data 5 terminal.

The applied discrete input signal must be present at the input terminal of the G9 ASD for the time setting here for a system response.

Discrete terminal input activation that does not equal or exceed this setting will be ignored.

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data
This parameter is used to set the pulse-count threshold value used to trigger the discrete output COUNT1 (ON Timer).
COUNT1 (ON Timer) outputs a 1 upon reaching the threshold setting of this parameter.

## My Function Count Data 2

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Data
This parameter is used to set the pulse-count threshold value used to trigger the discrete output COUNT2 (ON Timer).
COUNT2 (ON Timer) outputs a 1 upon reaching the threshold setting at this parameter.

## Input Function Target 1

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 4
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 1 terminal.

This setting assigns the function of the programmable Input Function Target 1 terminal to any one of the user-selectable functions listed in Table 7 on pg. 238 , Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

## Input Function Command 1

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 4
This parameter is used to assign a user-selected logical operator to two userselected Input Function Target variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg . 243 lists the available selections. Their use and selection requirements are described in an example at F977.
Input Function Target 2
Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 4
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 2 terminal.

This setting assigns the function of the programmable Input Function Target $\mathbf{2}$ terminal to any one of the user-selectable functions listed in Table 7 on pg . 238 , Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

## Input Function Command 2

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 4

This parameter is used to assign a user-selected logical operator to two userselected Input Function Target variables, enable a counter/timer function, or perform a hold/reset function.
Table 11 on pg .243 lists the available selections. Their use and selection requirements are described in an example at F977.

## Input Function Target 3 <br> Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 4

This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 3 terminal.

This setting assigns the function of the programmable Input Function Target 3 terminal to any one of the user-selectable functions listed in Table 7 on pg. 238 , Table 8 on pg. 239, or Table 10 on pg. 241.
See F977 for more information on this parameter

## Output Function Assigned

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 4
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the Output Function Assigned terminal.

This setting assigns the function of the programmable Output Function Assigned data location to one of the functions listed in the Input Setting field of Table 8 on pg. 239.

Settings:

$$
0-3099
$$

See the My Function Instruction Manual (P/N E6581335) and F977 for more information on this parameter.

## Input Function Target 1

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 5
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 1 terminal.

This setting assigns the function of the programmable Input Function Target 1 terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.
See F977 for more information on this parameter

## Input Function Command 1

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 5
This parameter is used to assign a user-selected logical operator to two userselected Input Function Target variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg . 243 lists the available selections. Their use and selection requirements are described in an example at F977.

## Input Function Target 2

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 5

This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 2 terminal.

This setting assigns the function of the programmable Input Function Target $\mathbf{2}$ terminal to any one of the user-selectable functions listed in Table 7 on pg. 238, Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

## Input Function Command 2

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 5
This parameter is used to assign a user-selected logical operator to two userselected Input Function Target variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg . 243 lists the available selections. Their use and selection requirements are described in an example at F977.

Input Function Target 3
Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 5
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 3 terminal.

This setting assigns the function of the programmable Input Function Target 3 terminal to any one of the user-selectable functions listed in Table 7 on pg . 238 , Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

## Output Function Assigned

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 5
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the Output Function Assigned terminal.

This setting assigns the function of the programmable Output Function Assigned data location to one of the functions listed in the Input Setting field of Table 8 on pg. 239.

Settings:

$$
0-3099
$$

See the My Function Instruction Manual (P/N E6581335) and F977 for more information on this parameter.

## Input Function Target 1

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 6

This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 1 terminal.
This setting assigns the function of the programmable Input Function Target $\mathbf{1}$ terminal to any one of the user-selectable functions listed in Table 7 on pg. 238 , Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

## Input Function Command 1

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 6
This parameter is used to assign a user-selected logical operator to two userselected Input Function Target variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg .243 lists the available selections. Their use and selection requirements are described in an example at F977.

## Input Function Target 2

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 6
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 2 terminal.

This setting assigns the function of the programmable Input Function Target 2 terminal to any one of the user-selectable functions listed in Table 7 on pg. 238 , Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

## Input Function Command 2

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 6
This parameter is used to assign a user-selected logical operator to two userselected Input Function Target variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg . 243 lists the available selections. Their use and selection requirements are described in an example at F977.

## Input Function Target 3

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 6

This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 3 terminal.

This setting assigns the function of the programmable Input Function Target 3 terminal to any one of the user-selectable functions listed in Table 7 on pg. 238 , Table 8 on pg. 239, or Table 10 on pg. 241
See F977 for more information on this parameter.

## Output Function Assigned

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 6
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the Output Function Assigned terminal.
This setting assigns the function of the programmable Output Function Assigned data location to one of the functions listed in the Input Setting field of Table 8 on pg. 239.

Settings:

$$
0-3099
$$

See the My Function Instruction Manual (P/N E6581335) and F977 for more information on this parameter.

## Input Function Target 1 <br> Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 7

This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 1 terminal.

This setting assigns the function of the programmable Input Function Target 1 terminal to any one of the user-selectable functions listed in Table 7 on pg. 238 , Table 8 on pg. 239, or Table 10 on pg. 241
See F977 for more information on this parameter.
Input Function Command 1
Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 7
This parameter is used to assign a user-selected logical operator to two userselected Input Function Target variables, enable a counter/timer function, or perform a hold/reset function.
Table 11 on pg .243 lists the available selections. Their use and selection requirements are described in an example at F977.

## Input Function Target 2

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 7

This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 2 terminal.

This setting assigns the function of the programmable Input Function Target $\mathbf{2}$ terminal to any one of the user-selectable functions listed in Table 7 on pg . 238 , Table 8 on pg. 239, or Table 10 on pg. 241
See F977 for more information on this parameter.

Input Function Command 2
Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 7
This parameter is used to assign a user-selected logical operator to two userselected Input Function Target variables, enable a counter/timer function, or perform a hold/reset function.

Table 11 on pg . 243 lists the available selections. Their use and selection requirements are described in an example at F977.

## Input Function Target 3

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 7

This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Input Function Target 3 terminal.

This setting assigns the function of the programmable Input Function Target 3 terminal to any one of the user-selectable functions listed in Table 7 on pg. 238 , Table 8 on pg. 239, or Table 10 on pg. 241.

See F977 for more information on this parameter.

## Output Function Assigned

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Unit 7
This parameter plays a role in the setup of the My Function feature by selecting the functionality of the Output Function Assigned terminal.

This setting assigns the function of the programmable Output Function Assigned data location to one of the functions listed in the Input Setting field of Table 8 on pg. 239.

Settings:

$$
0-3099
$$

See the My Function Instruction Manual (P/N E6581335) and F977 for more information on this parameter.

& 4-\text { Optional RX2+, RX2- } \\
& 5-\text { Optional V/I }
\end{aligned}
$$

## Analog Function Assigned Object 11

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Analog
This parameter plays a role in the setup of the My Function feature by selecting the functionality to which the adjustment of F959 is applied.

Settings:
0 - Disabled (None)
1 - Acceleration Rate
2 - Upper-Limit Frequency
3 - Acceleration Multiplication Factor
4 - Deceleration Multiplication Factor
5 - Manual Torque Boost
6 - Over-Current Stall (F601)
7 - Thermal Protection (F600)
8 - Speed Loop Proportional Gain (F460)
9 - Drooping Gain (F320)
10 - PID Proportional Gain (F362)
See the My Function Instruction Manual (P/N E6581335) for a complete description of the setup requirements and operational information of the Analog Function Assigned Object parameter.

## Analog Input Function Target 21

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Analog

This parameter plays a role in the setup of the My Function feature by selecting the functionality of the programmable Analog Input Function Target 21 terminal.
The function selected at F964 may be adjusted using the input analog control signal selected here.

## Settings:

0 — Disabled (None)
$1-\mathrm{VI} / \mathrm{II}(\mathrm{V} / \mathrm{I})$
2 - RR
3 - RX
4 - Optional RX2+, RX2-
5 - Optional V/I

## Direct Access Number - F962

Parameter Type - Selection List
Factory Default - 0 (Disabled)
Changeable During Run - Yes

## Analog Function Assigned Object 21

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Analog
This parameter plays a role in the setup of the My Function feature by selecting the functionality to which the adjustment of F962 is applied.

## Settings:

0 - Disabled (None)
1 - Acceleration Rate
2 - Upper-Limit Frequency
3 - Acceleration Multiplication Factor
4 - Deceleration Multiplication Factor
5 - Manual Torque Boost
6 - Over-Current Stall (F601)
7 - Thermal Protection (F600)
8 - Speed Loop Proportional Gain (F460)
9 - Drooping Gain (F320)
10 - PID Proportional Gain (F362)
See the My Function Instruction Manual (P/N E6581335) for a complete description of the setup requirements and operational information of the Analog Function Assigned Object parameter.

## Monitor Output Function 11

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Monitor

This parameter plays a role in the setup of the My Function feature by establishing the function that is to be recorded and output as the Peak, Minimum, or Normal (Avg.) value as selected at parameter Proportional.

Select the Monitor Display Input Setting number from Table 10 on pg. 241 to output the corresponding function.

Use the Communication Number if operating using communications.

See the My Function Instruction Manual (P/N E6581335) for a complete description of the setup requirements and operational information of the Monitor Output Function parameter.

## Monitor Output Function Command 11

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Monitor

This parameter plays a role in the setup of the My Function feature by allowing the user to select the Peak, Minimum, or Normal (Avg.) value of the parameter F965 selection to be recorded and output as a monitored function.

## Settings:

0 - Normal
1 - Peak
2 - Minimum

See the My Function Instruction Manual (P/N E6581335) for a complete description of the setup requirements and operational information of the Monitor Output Function parameter.

Direct Access Number - F964

## Direct Access Number - F966

Parameter Type - Selection List
Factory Default - Normal
Changeable During Run - Yes

## Monitor Output Function 21

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Monitor
This parameter plays a role in the setup of the My Function feature by establishing the function that is to be recorded and output as the Peak, Minimum, or Normal (Avg.) value as selected at parameter F968.

Select the Monitor Display Input Setting number from Table 10 on pg. 241 to output the corresponding function.

Use the Communication Number if operating using communications.
See the My Function Instruction Manual (P/N E6581335) for a complete description of the setup requirements and operational information of the Monitor Output Function parameter.

## Monitor Output Function Command 21 <br> Program $\Rightarrow$ My Function $\Rightarrow$ My Function Monitor

This parameter plays a role in the setup of the My Function feature by allowing the user to select the Peak, Minimum, or Normal (Avg.) value of the parameter F967 selection to be recorded and output as a monitored function.

Settings:
0 - Normal
1 -Peak
2 - Minimum
See the My Function Instruction Manual (P/N E6581335) for a complete description of the setup requirements and operational information of the Monitor Output Function parameter.

## Monitor Output Function 31

Program $\Rightarrow$ My Function $\Rightarrow$ My Function Monitor

This parameter plays a role in the setup of the My Function feature by establishing the function that is to be recorded and output as the Peak, Minimum, or Normal (Avg.) value as selected at parameter F970.

Select the Monitor Display Input Setting number from Table 10 on pg. 241 to output the corresponding function.

Use the Communication Number if operating using communications.
See the My Function Instruction Manual (P/N E6581335) for a complete description of the setup requirements and operational information of the Monitor Output Function parameter

## Virtual Input Terminal 1 Selection

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals
This parameter is used to set the functionality of the Virtual Input Terminal 1. As a virtual terminal, it exists only in memory and is considered to always be in its True (connected to CC) state

It is often practical to assign a function to this terminal that the user desires to be maintained regardless of external conditions or operations.
This parameter sets the programmable Virtual Input Terminal 1 terminal to one of the functions listed in Table 5 on pg .234.

In addition, the input terminal must be specified as Normally Open or Normally Closed

```
Virtual Input Terminal 2 Selection
Program \(\Rightarrow\) Terminal \(\Rightarrow\) Input Terminals
```

This parameter is used to set the functionality of the Virtual Input Terminal 2. As a virtual terminal, it exists only in memory and is considered to always be in its True (connected to CC) state

It is often practical to assign a function to this terminal that the user desires to be maintained regardless of external conditions or operations.

This parameter sets the programmable Virtual Input Terminal 2 terminal to one of the functions listed in Table 5 on pg. 234.

In addition, the input terminal must be specified as Normally Open or Normally Closed

## Virtual Input Terminal 3 Selection

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals
This parameter is used to set the functionality of the Virtual Input Terminal 3. As a virtual terminal, it exists only in memory and is considered to always be in its True (connected to CC) state.

It is often practical to assign a function to this terminal that the user desires to be maintained regardless of external conditions or operations.

This parameter sets the programmable Virtual Input Terminal 3 terminal to one of the functions listed in Table 5 on pg. 234.

In addition, the input terminal must be specified as Normally Open or Normally Closed

## Virtual Input Terminal 4 Selection

Program $\Rightarrow$ Terminal $\Rightarrow$ Input Terminals
This parameter is used to set the functionality of the Virtual Input Terminal 4. As a virtual terminal, it exists only in memory and is considered to always be in its True (connected to CC) state.
It is often practical to assign a function to this terminal that the user desires to be maintained regardless of external conditions or operations.

This parameter sets the programmable Virtual Input Terminal 4 terminal to one of the functions listed in Table 5 on pg. 234.

In addition, the input terminal must be specified as Normally Open or Normally Closed

```
My Function Selection
Program \(\Rightarrow\) My Function
This parameter Enables/Disables the configured My Function feature of the
G9 ASD.
```

## Settings:

```
0 - None (Disabled)
1 - My Function with Terminal Board Signal (discrete terminal activation)
2 - My Function Always On
```

## My Function

The My Function feature is configured using the settings of F900 to F977 and is used to enhance the programmability of the G9 ASD by performing two programmable functions: 1) the Combined Terminal Function, and 2) Logic Operations.

## Combined Terminal Function

Assigning more than one function to a discrete input terminal provides two advantages: it effectively expands the number of input terminals, and reduces the number of cables required to support the input/output functions (e.g., assigning ST and F to one terminal). Using Virtual Terminals 1 - $\mathbf{4}$ (F973 - F976) are required to use this function.
In the example below, the ST terminal assignment and the $\mathbf{F}$ terminal assignment will be combined as one terminal to illustrate this feature. However, any two of the discrete input terminal assignments listed in Table 5 on pg. 234 may be combined in this manner.

## Setup (example)

1. Disable the My Function parameter at F977 to prevent the system from starting upon completion of the setup.
2. Assign the $\mathbf{S T}$ function to the $\mathbf{S} \mathbf{1}$ terminal (F115).
3. Assign the $\mathbf{F}$ function to Virtual Input Terminal 1 (F973).
4. Set Input Function Target $\mathbf{1}$ to $\mathbf{5}$ (F900). This setting assigns S1 as the control input terminal.
5. Set Output Function Assigned to 21 (F905). This setting is a command that writes the F115 selection (S1) to Virtual Input Terminal 1, activating both.
6. Enable the My Function parameter at F977 by selecting My Function Always On or selecting My Function With TB Signal.
If set to My Function Always On, the combination of ST and $\mathbf{F}$ are always On (both are connected to CC only during the S1 activation).
If set to My Function With TB Signal, set a discrete input terminal to My Function Run Signal and connect it to CC to enable My Function. Connect $\mathbf{S 1}$ to $\mathbf{C C}$ to activate the $\mathbf{S T}+\mathbf{F}$ function. A disconnection at either terminal will terminate the My Function programming (discrete input terminal My Function Run Signal is Anded with discrete input terminal S1).

Connect $\mathbf{S 1}$ to $\mathbf{C C}$ and the $\mathbf{F}$-to- $\mathbf{C C}+$ the $\mathbf{S T}$-to- $\mathbf{C C}$ functions will be carried out using only S1.

With the aforementioned setup completed, provide a Frequency Command (F004) and the motor will run at the commanded frequency.

## Direct Access Number - F977 <br> Parameter Type - Selection List <br> Factory Default - None (Disabled) <br> Changeable During Run - No

## 1. DANGER

This parameter must always be set to None at the start of the My Function setup and remain set to None until all of the My Function parameter settings have been confirmed as being correct.

If enabled for normal operation using settings 1 or 2, the motor may start and engage the driven equipment unexpectedly upon receiving a Run signal during the My Function setup.

## Combined Terminal Function (Cont.)

Output terminals may also be combined to produce one output response to multiple conditions using the computational operators of Table 11 on pg. 243. Assigning more than one function to a discrete output terminal provides two advantages: it effectively expands the number of input terminals, and reduces the number of cables required to support the input/output functions (e.g., assigning Low-Speed Detection and Low-Current Detection to one output terminal). Using Virtual Terminals $\mathbf{1 - 4}$ (F973-F976) are required to use this function.

In the example below, the Low-Speed Signal (detection) terminal assignment and the Low-Current Detection terminal assignment will be combined as one terminal output to illustrate this feature. However, any two of the discrete output terminal assignments may listed in Table 8 on pg. 239 may be combined in this manner

## Setup (example)

1. Disable the My Function parameter at F977 to prevent the system from starting upon completion of the setup.
2. From Program $\Rightarrow$ Direct Access $\Rightarrow$ Unknown Numbers, select Enabled.
3. Set the OUT1 terminal (F130) to My Function Output 1 (222).
4. Set Input Function Target $\mathbf{1}$ (F900) to $\mathbf{1 0 0 4}$ (Low-Speed Signal detection). See Table 8 on pg. 239 for a complete listing of available settings.
5. Set Input Function Target 2 (F902) to $\mathbf{1 0 2 6}$ (Low-Current Alarm). See Table 8 on pg. 239 for a complete listing of available settings.
6. Set Input Function Command 1 (F901) to AND (3). This setting assigns an operator to the Input Function Target 1 and the Input Function Target 2 settings.
7. Set Output Function Assigned (F905) to 1222. This setting will transfer the results of the logical AND to My Function Output 1 (OUT1).
8. Enable the My Function parameter at F 977 by selecting My Function Always On.
With the aforementioned setup completed in the example, once the Low-Speed Signal AND the Low-Current Alarm are active, the OUT1 terminal is activated for the duration of the Low-Speed/Low-Current condition.

See the My Function Instruction Manual (P/N E6581335) for a complete description of the setup requirements and operational information of the My Function parameter.

## Direct Access Number - F977 <br> Parameter Type - Selection List <br> Factory Default - None (Disabled) <br> Changeable During Run - No

## 1. DANGER

This parameter must always be set to None at the start of the My Function setup and remain set to None until all of the My Function parameter settings have been confirmed as being correct

If enabled for normal operation using settings 1 or 2, the motor may start and engage the driven equipment unexpectedly upon receiving a Run signal during the My Function setup.

## Traverse Selection

Program $\Rightarrow$ Special $\Rightarrow$ Traverse
This parameter setting is used in the setup of the Traverse control mode of operation and is used in conjunction with the discrete terminal activation of the Traverse Permission Signal.

This parameter is used to enable the Traverse function. The Traverse function is activated via the discrete input terminal (see Table 5 on pg. 234).

See the Traverse Control Instruction Manual (P/N 58693) for more information on this feature.

Settings:
$0-$ Disabled
1 - Enabled

Traverse Acceleration Time
Program $\Rightarrow$ Special $\Rightarrow$ Traverse
This parameter setting is used in the setup of the Traverse control mode of operation. This setting establishes the acceleration rate used during the Traverse function.

See the Traverse Control Instruction Manual (P/N 58693) for more information on this feature.
Traverse Deceleration Time $\quad$ Direct Access Number - F982
Program $\Rightarrow$ Special $\Rightarrow$ Traverse
This parameter setting is used in the setup of the Traverse control mode of operation. This setting establishes the deceleration rate used during the Traverse function.

See the Traverse Control Instruction Manual (P/N 58693) for more information on this feature.

Traverse Step
Program $\Rightarrow$ Special $\Rightarrow$ Traverse
This parameter setting is used in the setup of the Traverse control mode of operation. This setting is used as a multiplier to establish the amount that the frequency is increased or decreased while using the Traverse function.

See the Traverse Control Instruction Manual (P/N 58693) for more information on this feature.

Traverse Jump Step
Program $\Rightarrow$ Special $\Rightarrow$ Traverse
This parameter setting is used in the setup of the Traverse control mode of operation. This setting is used as a multiplier to establish the amount that the frequency is increased or decreased while using the Traverse function when a short burst of rapid speed change is required.

See the Traverse Control Instruction Manual (P/N 58693) for more information on this feature.

| NO NC |  |  |  |  |  |  |  |
| 32 | 33 | Torque Limit Switching 1/Torque Limit Switching 2 - Activating combinations of discrete input terminals Torque Limit Switching $\mathbf{1}$ and $\mathbf{2}$ allow for the selection of a torque limit switching profile as listed below. |  |  |  |  |  |
|  |  | Torque Limit Switching Terminal |  | Torque Limit Selection | The 1-4 settings of the torque limit switching selections are performed at parameters F440 F449. |  |  |
|  |  | \#1 | \#2 |  |  |  |  |
| 34 |  | 0 | 0 | 1 |  |  |  |
|  | 35 | 0 | 1 | 2 |  |  |  |
|  |  | 1 | 0 | 3 |  |  |  |
|  |  | 1 | 1 | 4 |  |  |  |
|  |  | $1=$ Ter | tivated |  |  |  |  |
| 36 | 37 | PID Off - Turns off PID control. |  |  |  |  |  |
| 38 | 39 | Pattern Operation Group 1 - Initiates the Pattern 1 Pattern Run. |  |  |  |  |  |
| 40 | 41 | Pattern Operation Group 2 - Initiates the Pattern 2 Pattern Run. |  |  |  |  |  |
| 42 | 43 | Pattern Operation Continuation - Initiates a continuation of the last Pattern Run from its stopping point. |  |  |  |  |  |
| 44 | 45 | Pattern Operation Trigger - Initiates the first Preset Speed of a Pattern Run and initiates each subsequent enabled Preset Speed with continued activations. |  |  |  |  |  |
| 46 | 47 | External Over-Heat - Causes an Over-Heat Trip (OH). |  |  |  |  |  |
| 48 | 49 | Local Priority (cancels serial priority) — Overrides any serial control and returns the Command and Frequency control to the settings of F003 and F004. |  |  |  |  |  |
| 50 | 51 | Hold (3-Wire Stop) - Decelerates the motor to a stop. |  |  |  |  |  |
| 52 | 53 | PID Differentiation/Integration Clear - Clears the PID value. |  |  |  |  |  |
| 54 | 55 | PID Forward/Reverse Switching - Toggles the gradient characteristic of the feedback response of the VI/II (V/I) terminal during PID-controlled operation. |  |  |  |  |  |
| 56 | 57 | Forced Continuous Operation - Ignore PID control settings for the duration of activation. |  |  |  |  |  |
| 58 | 59 | Specified Speed Operation - Runs speed as commanded by the Frequency Mode setting. |  |  |  |  |  |
| 60 | 61 | Dwell Signal — Used in conjunction with the Acceleration/Deceleration Suspend function (F349) - suspends the Accel/Decel function for the duration of the activation. |  |  |  |  |  |
| 62 | 63 | Power Failure Synchronized Signal - Activates the Synchronized Accel/Decel function of the Regenerative Power Ridethrough feature. See F302 for more information on this terminal setting. |  |  |  |  |  |
| 64 | 65 | My Function Run - Activates the configured My Function feature. See F977 for more information on this parameter. |  |  |  |  |  |
| 66 | 67 | Autotuning Signal - Initiates the Autotune function. Set F400 to Autotuning by Input Terminal Signal. |  |  |  |  |  |
| 68 | 69 | Speed Gain Switching - Toggles the ASD operating mode from and to Speed Control and Torque Control. Speed Control operation references parameter settings F460 and F461. Torque Control operation references parameter settings F462 and F463. |  |  |  |  |  |
| 70 | 71 | Servo Lock - Holds the motor at 0 Hz until a Run command is received. |  |  |  |  |  |
| 72 | 73 | Simple Positioning - While operating in the Positioning Control mode, activation initiates the Stop command. See F381 for more information on this terminal setting. |  |  |  |  |  |
| 74 | 75 | kWH Display Clear - Clears the kWH meter display. |  |  |  |  |  |
| 76 | 77 | Trace Back Trigger- Initiates the data Read/Store function of the Trace Selection parameter. See F740 for more information on this feature. |  |  |  |  |  |
| 78 | 79 | Light-Load High-Speed Disable - Terminates the Light-Load High-Speed operation. |  |  |  |  |  |
| Note: $\quad$ NO/NC = Normally Open/Normally Closed. |  |  |  |  |  |  |  |

Table 5. (Continued) Discrete Input Terminal Assignment Selections And Descriptions.

|  |  | Terminal Selection Descriptions |
| :---: | :---: | :---: |
| NO | NC |  |
| 86 | 87 | Binary Write - Writes the status of the discrete input terminals to the control board during binary input speed control. |
| 88 | 89 | UP/DOWN Frequency (up) - Increases the speed of the motor for the duration of activation until reaching the Upper-Limit setting or increases the speed of the motor in steps (see F264 for more information on this feature). |
| 90 | 91 | UP/DOWN Frequency (down) - Decreases the speed of the motor for the duration of activation until reaching the Lower-Limit setting or decreases the speed of the motor in steps (see F264 for more information on this feature). |
| 92 | 93 | UP/DOWN Frequency (clear) - While operating in the Up/Down Frequency speed control mode this terminal initiates a 0 Hz output command. If operating with an activated UP/DOWN Frequency (up or down) terminal, the output goes to the Lower-Limit (F013) setting. |
| 98 | 99 | Forward/Reverse - This setting operates in conjunction with another terminal being set to the Run/Stop function. When configured to Run (Run/Stop to CC), the make or break of this connection to $\mathbf{C C}$ changes the direction of the motor. |
| 100 | 101 | Run/Stop - This terminal enables the motor to run when activated and disables the |
| 102 | 103 | Commercial Power/ASD Switching - Initiates the ASD-to-Commercial Power switching function. See parameter F354 for more information on this feature. |
| 104 | 105 | Frequency Reference Priority Switching - Toggles frequency control to and from the settings of F004 and F207. |
| 106 | 107 | VI/II (V/I) Terminal Priority - Assigns Speed control to the V/I Terminal and overrides the F004 setting. |
| 108 | 109 | Command Terminal Board Priority - Assigns Command control to the Terminal Board and overrides the F003 setting. |
| 110 | 111 | Edit Enable - Allows for the override of the lockout parameter setting (F700) allowing for parameter editing. |
| 112 | 113 | Control Switching - Toggles the system to and from the speed control and the torque control modes. |
| 122 | 123 | Fast Deceleration - Using dynamic braking (if enabled and supported), stops the motor at the fastest rate allowed by the load. |
| 124 | 125 | Preliminary Excitation - Applies an excitation current to the motor (holds shaft stationary) for the duration of the activation. |
| 126 | 127 | Brake Request - Initiates the brake release command. This setting requires that another discrete input terminal be set to Brake Answerback Input to complete the brake release command and to convey the status of the braking system to the user or to a dependent subsystem. <br> Once the braking release function is initiated, the Trouble Internal Timer begins to count down (Trouble Internal Timer value is set at F630). Should the count-down timer expire before the brake releases or before the Brake Answerback Input is returned, fault E-11 will occur. Otherwise, the brake releases the motor and normal motor operations resume. <br> The Braking Release function is primarily used at startup; but, may be used when the brake is applied while the motor is running. |
| 130 | 131 | Brake Answerback Input - This setting is required when the Braking Request function is used. The function of this input terminal is to receive the returned status of the braking system. The returned status is either Released or Not Released. <br> If Released is returned within the time setting of F630, normal system function resumes. <br> If Not Released is returned or if the F630 time setting times out before either signal is returned, then fault E-11 occurs. The returned signal may also be used to notify the user or control a dependent subsystem. |
| 134 | 135 | Traverse Permission Signal - Enables/Disables the Traverse function. See parameter F980 for more information on this feature. |
|  | Note | : NO/NC = Normally Open/Normally Closed. |

| 3063 | FE63 |  |  | My Function Monitor 4 (Output of Signed Value) |  |
|  |  | 3066 | FE66 | Expansion I/O Card 1 CPU Version |  |
|  |  | 3067 | FE67 | Expansion I/O Card 2 CPU Version |  |
|  |  | 3076 | FE76 | Integral Input Power | 0.01 kW |
|  |  | 3077 | FE77 | Integral Output Power | 0.01 kW |
|  |  | 3084 | FE84 | 16-Bit BIN/BCD Input Value | 1 |

Table 11. My Function Operator selections.

| My Function Computational Selections |  |  |
| :---: | :---: | :---: |
| Input Function Command | Function Name | Function Description |
| 0 | NOP (No Operation) | Disables the My Function feature. |
| 1 | ST | Execute data read/transfer. |
| 2 | STN | Execute inverted data read/transfer. |
| 3 | AND | Logical product of A AND B. |
| 4 | ANDN | Logical product of A AND $\overline{\mathrm{B}}$. |
| 5 | OR | Logical sum of A OR B. |
| 6 | ORN | Logical sum of A OR $\overline{\mathrm{B}}$. |
| 7 | EQ | Compares data - Outputs 1 if Equal; 0 if not Equal. |
| 8 | NE | Compares data - Outputs 0 if Equal; 1 if not Equal. |
| 9 | GT | Compares data - Outputs 1 if $\mathrm{A}>\mathrm{B} ; 0$ if $\mathrm{A} \leq \mathrm{B}$. |
| 10 | GE | Compares data - Outputs 1 if $\mathrm{A} \geq \mathrm{B} ; 0$ if $\mathrm{A}<\mathrm{B}$. |
| 11 | LT | Compares data - Outputs 1 if $\mathrm{A}<\mathrm{B} ; 0$ if $\mathrm{A} \geq \mathrm{B}$. |
| 12 | LE | Compares data - Outputs 1 if $\mathrm{A} \leq \mathrm{B} ; 0$ if $\mathrm{A}>\mathrm{B}$. |
| 13 | ASUB | Outputs absolute difference between A and B-\|A-B| |
| 14 | ON (Timer) | Enables the On response time delay settings of My Function Time Data 1-5 (F928 - F932) for My Function Data. |
| 15 | OFF (Timer) | Enables the Off response time delay settings of My Function Time Data 1 - 5 (F928 - F932) for My Function Data. |
| 16 | COUNT1 (Timer) | Outputs a 1 upon reaching the pulse count setting of F933. |
| 17 | COUNT2 (Timer) | Outputs a 1 upon reaching the pulse count setting of F934. |
| 18 | HOLD | Outputs the peak output value since powering up or since the last reset. |
| 19 | SET | Sets data. |
| 20 | RESET | Resets data. |

## Alarms, Trips, and Troubleshooting <br> Alarms and Trips

This section lists the available user-notification codes of the EOI display and provides information that assists the user in the event that a Fault is incurred. The User Notification codes are displayed as an indication that a system function or system condition is active (i.e., ATN, DB, and DBON). The code is displayed on the EOI for the duration of the activation.

If a user setting or a ASD parameter has been exceeded, or if a data transfer function produces an unexpected result, a condition that is referred to as a Fault is incurred.

An Alarm is an indication that a Fault is imminent if existing operating conditions continue unchanged. An Alarm may be associated with an output terminal to notify the operator of the condition remotely, close a contact, or engage a brake. At the least, an Alarm will cause an alarm code to appear on the EOI display. Table 13 on pg. 246 lists the Alarm codes that may be displayed during operation of the ASD.

In the event that the condition that caused the Alarm does not return to its normal operating level within a specified time, the ASD Faults and a Trip is incurred (Fault and Trip are sometimes used interchangeably).

A Trip is a safety feature (the result of a Fault) that disables the ASD system and removes the 3-phase power to the motor in the event that a subsystem of the ASD is malfunctioning, or one or more of the variables listed below exceeds its normal range (time and/or magnitude).

- Current,
- Voltage,
- Speed,
- Temperature,
- Torque, or
- Load.

See Table 14 on pg. 248 for a listing of the potential Trips and the associated probable causes.
The operating conditions at the time of the trip may be used to help determine the cause of the trip. Listed below are operating conditions that may be used to assist the operator in correcting the problem or that the ASD operator should be prepared to discuss when contacting the Toshiba Customer Support Center for assistance.

- What trip information is displayed?
- Is this a new installation?
- Has the system ever worked properly and what are the recent modifications (if any)?
- What is the ASD and Motor size?
- What is the CPU version and revision level?
- What is the EOI version?
- Does the ASD trip when accelerating, running, decelerating, or when not running?
- Does the ASD reach the commanded frequency?
- Does the ASD trip without the motor attached?
- Does ASD trip with an unloaded motor?

## User Notification Codes

The User Notification codes appear in the top right corner of the Frequency Command screen while the associated function is active.
User Notification codes notify the user of active functions that are usually only momentary under normal conditions and are active for the duration of activation only. User notification events are not error conditions and only convey active system functions to the user.

Table 12. User Notification Codes.

| LED | Function | Description |
| :--- | :--- | :--- |
| Atn | Autotune Active | Indicates that the Autotune function is active. |
| dbOn | DC Braking | This code conveys the DC Injection function being carried out. The display shows db when <br> braking and shows dbOn when the motor shaft stationary function is being carried out. |

## Alarms

Table 13 lists the alarm codes that may be displayed during operation of the ASD. Each alarm code is accompanied by a description and a possible cause. In the event that the source of the malfunction cannot be determined, contact your Toshiba Sales Representative for further information on the condition and for an appropriate course of action.

The Alarms are listed in the top-down order that they are checked for activation. Only the first to be detected will be displayed on the Frequency Command screen.

Table 13. G9 ASD Alarms.

| LED Screen | $\begin{aligned} & \text { LCD } \\ & \text { Screen } \end{aligned}$ | Description | Possible Causes |
| :---: | :---: | :---: | :---: |
| CM1 | Comm1 Error | Internal communications error. | - Improperly programmed ASD. |
| CM2 | Comm2 Error | External communications error. | - Improper communications settings. <br> - Improperly connected cables. |
| E | Emergency Off | Output signal from the ASD is terminated and a brake may be applied if so configured. | - Stop-Reset pressed twice at the EOI. <br> - EOFF command received remotely. <br> - ASD reset required. |
| MOFF | Main <br> Under-Voltage | Under-voltage condition at the 3-phase AC input to the ASD. | - Low 3-phase utility voltage. |
| OC | Over-Current | ASD output current greater than F601 setting. | - Defective IGBT (U, V, or W). <br> - ASD output to the motor is connected incorrectly. <br> - ASD output phase-to-phase short. <br> - The ASD is starting into a spinning motor. <br> - Motor/machine jammed. <br> - Mechanical brake engaged while the ASD is starting or while running. <br> - Accel/Decel time is too short. <br> - Voltage Boost setting is too high. <br> - Load fluctuations. <br> - ASD operating at an elevated temperature. |
| *OH | Over-Heat | ASD ambient temperature excessive. | - ASD is operating at an elevated temperature. <br> - ASD is too close to heat-generating equipment. <br> - Cooling fan vent is obstructed (see Mounting the ASD on pg. 15). <br> - Cooling fan is inoperative. <br> - Internal thermistor is disconnected. |
| OJ | Timer | Run-time counter exceeded. | - Type Reset required; select Clear Run Timer. |
| * Reset ignored if active. |  |  |  |

| LED Screen | LCD Screen | Description | Possible Causes |
| :---: | :---: | :---: | :---: |
| *OLI | ASD Overload | Load requirement in excess of the capability of the ASD. | - The carrier frequency is too high. <br> - An excessive load. <br> - Acceleration time is too short. <br> - DC damping rate is set too high. <br> - The motor is starting into a spinning load after a momentary power failure. <br> - The ASD is improperly matched to the application. |
| OLM | Motor Overload | Load requirement in excess of the capability of the motor. | - V/f parameter improperly set. <br> - Motor is locked. <br> - Continuous operation at low speed. <br> - The load is in excess of what the motor can deliver. |
| *OLR | Resistor Overload | Excessive current at the Dynamic Braking Resistor. | - Deceleration time is too short. <br> - DBR configuration improperly set. |
| *OP | Over-Voltage | DC bus voltage exceeds specifications. | - ASD attempting to start into a spinning motor after a momentary power loss. <br> - Incoming utility power is above the specified range. <br> - Decel time is too short. <br> - Voltage spikes at the 3-phase input; install inductive filter. <br> - DBR required. <br> - DBR resistance value is too high. <br> - DBR function is turned off. <br> - Over-Voltage Stall feature is turned off. <br> - System is regenerating. <br> - Load instability. <br> - Disable the Ridethrough function (F302). |
| OT | Over-Torque | Torque requirement in excess of the setting of F616 or F617 for a time longer than the setting of F618. | - ASD is not correctly matched to the application. <br> - F616 or F617 setting is too low. <br> - Obstructed load. |
| *POFF | Control <br> Under-Voltage | Under-voltage condition at the 5 , 15 , or the 24 VDC supply. | - Defective Control board. <br> - Excessive load on power supply. <br> - Low input voltage. |
| PtSt | Reference Point | Two speed-reference frequency setpoint values are too close to each other. | - Two speed reference frequency setpoints are too close to each other (increase the difference). |
| UC | Under-Current | With the Low-Current Trip (F610) parameter enabled, the output current of the ASD is below the level defined at F611 and remains there for a time longer than the setting of F612. |  |

## Trips/Faults

A Trip is a ASD response to a Fault (though Fault and Trip are sometimes used interchangeably). A Trip is a safety feature that disables the ASD system in the event that a subsystem of the ASD is malfunctioning or a parameter setting has been exceeded.
Listed in Table 14 are the Faults that may result in a Trip and the possible causes. When a Trip is incurred the LCD shows the Fault screen and the LED Screen displays the active Fault code.

Table 14. G9 ASD Fault Listing.

| LED Screen | LCD Screen | Possible Causes |
| :---: | :---: | :---: |
| E | Emergency Off | - Emergency Off command received via EOI or remotely. |
| E-10 | Sink/Source Setting Error | - Improperly positioned Sink/Source jumper on the Terminal board or on an option device (see J100 at the Terminal PCB of the ASD). <br> - Sink/Source configuration is incorrect. |
| E-11 | Brake Sequence Response Error | - F630 is set to a non-zero value. <br> - Braking sequence discrete input and output terminals are not setup properly. |
| E-12 | Encoder Signal-Loss Error | - ASD is configured to receive a signal from a shaft-mounted encoder and no signal is being received while running. <br> - Disconnection at the Encoder circuit. <br> - Motor is stopped and is generating torque via torque limit control. <br> - ASD is not configured properly. |
| E-13 | Speed Error | - Result of a motor speed that is greater than the commanded speed when using an encoder for speed control. <br> - Improper encoder connection or setup information. <br> - Defective encoder. |
| E-17 | Key Failure | - Same key input for 20 seconds or more. |
| E-18 | Analog (Terminal) Input Loss | - V/I signal loss. <br> - Terminal Board failure. <br> - P24 over-current condition. <br> - F633 setting is too high. |
| E-19 | CPU Communication Error | - CPU data Transmit/Receive error. |
| E-20 | V/f Control Error | - Torque processing error. <br> - Make service call. |
| E-21 | CPU Processing Error | - Software processed incorrectly. <br> - Make service call. |
| E-22 | Logic Input Voltage Error | - Incorrect voltage applied to the discrete input terminals. |
| E-23 | Optional Expansion Input Terminal Board 1 Error | - Optional Expansion Input Terminal Board 1 is defective. |
| E-24 | Optional Expansion Input Terminal Board 2 Error | - Optional Expansion Input Terminal Board 2 is defective. |

| LED Screen | LCD Screen | Possible Causes |
| :--- | :--- | :--- |
| E-25 | Stop Position Retaining <br> Error | - Load movement while stopped. <br> - F381 setting is too low. <br> - Encoder malfunction. <br> - Creep speed is too high. |
| E-26 | CPU2 Fault | - CPU malfunction. <br> - Control board malfunction. |
| E-50/E-51 | Sink/Source Setting Error | - Improperly positioned Sink/Source jumper on the Terminal board or on an <br> option device (see J100 at the Terminal PCB of the ASD). |
| EEP1 | EEPROM Fault | - EEPROM |
| EEP2/EEP3 | EEPROM Read Error | - Make a service call. |

| LED Screen | LCD Screen | Possible Causes |
| :---: | :---: | :---: |
| ETN | Autotune Error | - Autotune readings that are significantly inconsistent with the configuration information. <br> - A non-3-phase motor is being used. <br> - Incorrect settings at F400 or F413. <br> - Using a motor that has a significantly smaller rating than the ASD. <br> - ASD output cabling is too small, too long, or is being housed in a cable tray with other cables that are producing an interfering EMF. <br> - Motor is running during the Autotune function. |
| ETN1 |  | - F402 adjustment required (Motor temperature is too high). <br> - F410 adjustment required (Motor Constant 1 improperly set). |
| ETN2 |  | - F412 adjustment required (Motor Constant 3 improperly set). |
| ETN3 |  | - Autotune setting F400 is set to Auto Calculation and there is a problem with the Motor Constant readings. |
| ETYP | Typeform Error | - Firmware information (typeform) loaded into the Gate Driver board is inconsistent with the device in which the firmware is being used. <br> - The Gate Driver board has been replaced. <br> - The Gate Driver board is defective. |
| None | No Errors | - No active faults. |
| OC1 | Over-Current During Acceleration | - Improper V/f setting. <br> - Restart from a momentary power outage. <br> - The ASD is starting into a rotating motor. <br> - ASD/Motor not properly matched. <br> - Phase-to-phase short ( $\mathbf{U}, \mathbf{V}$, or $\mathbf{W})$. <br> - Accel time too short. <br> - Voltage Boost setting is too high. <br> - Motor/machine jammed. <br> - Mechanical brake engaged while the ASD is running. <br> - ASD current exceeds $340 \%$ of the rated FLA on ASDs that are 100 HP or less during acceleration. On ASDs that are greater than 100 HP , this fault occurs when the ASD current exceeds $320 \%$ of the rated FLA during acceleration. |
| OC1P | Over-Heat During Acceleration | - Cooling fan inoperative. <br> - Ventilation openings are obstructed. <br> - Internal thermistor is disconnected. <br> - Acceleration time is too short. <br> - Improper V/f setting. <br> - ASD or the motor is improperly matched to the application. |

| LED Screen | LCD Screen | Possible Causes |
| :---: | :---: | :---: |
| OC2 | Over-Current During Deceleration | - Phase-to-phase short ( $\mathbf{U}, \mathbf{V}$, or $\mathbf{W})$. <br> - Deceleration time is too short. <br> - Motor/machine jammed. <br> - Mechanical brake engaged while the ASD is running. <br> - ASD current exceeds $340 \%$ of the rated FLA on ASDs that are 100 HP or less during deceleration. On ASDs that are greater than 100 HP , it occurs when the ASD current exceeds $320 \%$ of the rated FLA during deceleration. |
| OC2P | Over-Heat During Deceleration | - Cooling fan inoperative. <br> - Ventilation openings are obstructed. <br> - Internal thermistor is disconnected. <br> - Deceleration time is too short. <br> - DC Injection current is too high. <br> - ASD or the motor is improperly matched to the application. |
| OC3 | Over-Current During Run | - Load fluctuations. <br> - ASD is operating at an elevated temperature. <br> - ASD current exceeds $340 \%$ of the rated FLA on ASDs that are 100 HP or less during a fixed-speed run or if during a fixed-speed run the ASD overheats. On ASDs that are greater than 100 HP , it occurs when the ASD current exceeds $320 \%$ of the rated FLA on a fixed-speed run. |
| OC3P | Over-Heat During Run | - Cooling fan inoperative. <br> - Ventilation openings are obstructed. <br> - Internal thermistor is disconnected. <br> - Improper V/f setting. <br> - ASD or the motor is improperly matched to the application. |
| OCA1 or OCL | U-Phase Over-Current | - Low impedance at the U lead of the ASD output. |
| OCA2 or OCL | V-Phase Over-Current | - Low impedance at the V lead of the ASD output. |
| OCA3 or OCL | W-Phase Over-Current | - Low impedance at the W lead of the ASD output. |
| OCR | Dynamic Braking Resistor Over-Current | - ASD inability to discharge the bus voltage during regeneration. <br> - No Dynamic Braking Resistor (DBR) installed. <br> - DBR value is too low. <br> - Deceleration time is too short. <br> - Improper DBR setup information. <br> - Defective IGBT7 (or IGBT7 ckt.). <br> - 3-phase input voltage is above specification. |
| OH | Over-Heat | - Cooling fan inoperative. <br> - Ventilation openings are obstructed. <br> - Internal thermistor is disconnected. |
| OH2 | External Over-Heat | - Excessive-heat signature received at the TB3 - TH1 (+) and TH1 (-) terminals. See F637 for setup information. |

| LED Screen | LCD Screen | Possible Causes |
| :---: | :---: | :---: |
| OL1 | ASD Overload | - Acceleration time is too short. <br> - DC Injection current is too high. <br> - Improper V/f setting. <br> - Motor running during restart. <br> - ASD or the motor is improperly matched to the application. |
| OL2 | Motor Overload | - Improper V/f setting. <br> - Motor is locked. <br> - Continuous operation at low speed. <br> - Load requirement exceeds ability of the motor. <br> - Startup frequency setting adjustment required. |
| OLR | Dynamic Braking Resistor Overload | - Deceleration time is too short. <br> - Improper DBR setup information. <br> - Improper Stall setup information. |
| OP1 | Over-Voltage During Acceleration | - Motor running during restart. |
| OP2 | Over-Voltage During Deceleration | - Deceleration time is too short. <br> - DBR value is too high. <br> - DBR required (DBR setup required). <br> - Stall protection is disabled. <br> - 3-phase input voltage is out of specification. <br> - Input reactance required. |
| OP3 | Over-Voltage During Run | - Load fluctuations. <br> - 3-Phase input voltage out of specification. <br> - DBR required (DBR setup required). |
| OT | Over-Torque | - A torque requirement by the load in excess of the setting of F616 or F617 for a time longer than the setting of F618. <br> - The ASD is improperly matched to the application. <br> - The load is obstructed. |
| SOUT | Step Out (for PM Motor Only) | - Motor shaft is locked. <br> - Output phase is open. <br> - Operating a reciprocating load. |
| UP1 | Main Power Under-Voltage | - Input 3-phase voltage is too low. <br> - Momentary power failure longer than the time setting of F628. |
| UP2 | Control Power Under-Voltage | - This fault is caused by an under-voltage condition at the 5,15 , or the 24 VDC supply. <br> - Loss of the SU+ voltage while operating in the Backup Power mode. <br> - 3-phase input voltage low. |

## Viewing Trip Information

In the event that the condition causing an Alarm does not return to the normal operating level within a specified time, the ASD Faults and a Trip is incurred.

When a trip occurs, the resultant error information may be viewed either from the LED Screen, LCD
Fault screen (Table 14 on pg. 248), Monitor screen, or the Trip History screen (Program $\Rightarrow$ Utilities $\Rightarrow$ Trip History).

## Trip Record at Monitor Screen

The at-trip condition of the last four incurred trips may be viewed on the Monitor Screen. The Monitor Screen displays the records of up to four trips and catalogs each trip as Past Trip \#1 through Past Trip \#4 (see pg. 44). Once reset (Type Reset), the trip records are erased. If no trips have occurred since being powered up or since the last reset, None is displayed for each trip record.

The Monitor Screen at-trip record is erased when the ASD is reset.
Note: An improper ASD setup may cause some trips - reset the ASD to the Factory Default settings before pursuing a systemic malfunction (Program $\Rightarrow$ Utilities $\Rightarrow$ Type Reset $\Rightarrow$ Reset to Factory Settings).

## Trip History

The Trip History screen records the system parameters for up to 20 trips. The recorded trips are numbered from zero to 19 . Once the Trip History record reaches trip number 19, the oldest recorded trip will be deleted with each new record stored (first-in first-out). The Trip \# field may be selected and scrolled through to view the recorded trip information for a given trip number. The monitored parameters are listed in Table 15 as At-Trip Recorded Parameters (parameter readings at the time that the trip occurred).

Table 15. Trip History Record Parameters.

| At-Trip Recorded Parameters |  |  |  |
| :--- | :--- | :--- | :--- |
| 1) Trip Number | 8) Frequency Reference | 15) Feedback (1 sec.) | 22) ASD Overload |
| 2) Trip Type | 9) Bus Voltage | 16) Torque | 23) DBR Overload |
| 3) Time and Date | 10) Discrete Input Status | 17) Torque Reference | 24) Motor Load |
| 4) Frequency at Trip | 11) OUT1/OUT2/FL Status | 18) Torque Current | 25) ASD Load |
| 5) Output Current | 12) Timer | 19) Excitation Current | 26) DBR Load |
| 6) Output Voltage | 13) Post Compensation Frequency | 20) PID Value | 27) Input Power |
| 7) Direction | 14) Feedback (inst.) | 21) Motor Overload | 28) Output Power |
| Trip records are comprised of the full list of monitored parameters (28). |  |  |  |

## Clearing a Trip

Once the cause of the trip has been corrected, performing a Reset re-enables the ASD for normal operation.

The trip may also be cleared using either of the following methods:

- Cycling power (trip info may be saved via F602 if desired),
- Pressing the Stop-Reset key twice,
- Remotely via the communications channel,
- Momentarily connecting terminal RES to CC of the Terminal Board, or
- Via Program $\Rightarrow$ Utilities $\Rightarrow$ Type Reset $\Rightarrow$ Clear Past Trip (clears Monitor Screen records only).

## Enclosure Dimensions and Conduit Plate Information

The G9 ASD part numbering convention is shown below.
The enclosure dimensions for the available models (typeforms) are listed in Table 16 and Table 17. The conduit plates referenced are shown in Figure 34, Figure 35, and Figure 36.

G9 Part Numbering Convention.

Note: $\quad$ The Type 1 enclosed versions of these drives meet or exceed the specification UL 501995, the Standard for Heating and Cooling Equipment, and complies with the applicable requirements for installation in a compartment handling conditioned air.

Note: All Toshiba ASD enclosures carry an IP20 rating.

## Cable/Terminal/Torque Specifications

Installation should conform to the 2008 National Electrical Code Article 110 (NEC) (Requirements for Electrical Installations), all regulations of the Occupational Safety and Health Administration, and any other applicable national, regional, or industry codes and standards.

Note: $\quad$ The following ratings are guidelines and shall not be the sole determining factor of the lug or wire size used with the ASD. Application-specific applicables, wire insulation type, conductor material, and local and regional regulations are but a few of the considerations when selecting the actual lug and wire type to be used with the ASD.

Note: Cable/Terminal specifications are based on the rated current of the ASD. The specifications DO NOT include the 10\% Service Factor.

Note: Use only $75^{\circ} \mathrm{C}$ copper wire/cable for motor and power connections.
For further installation information see the section titled Installation and Connections on pg. 14.
Table 20. 230-Volt G9 ASD Cable/Terminal/Torque Specifications.

Note: (**) Indicates that the item is one of a set of three parallel cables.

## Dynamic Braking Resistor Wire/Cable Specifications

Thermal protection for the DBR circuit (see Figure 37. on pg. 268) or an input contactor that will open the 3-phase power input circuit (see Figure 38. on pg. 268) to the G9 ASD in the event that a DBR overtemperature condition occurs is a requirement. If a DBR failure occurs or should a power source overvoltage condition occur the DBR thermal protection circuitry will prevent hazardous DBR temperatures.
To use the Dynamic Braking function the following requirements must be met:

- Enable the DBR function,
- Select a Resistance Value, and
- Set the Continuous Braking Wattage value at F304, F308, and F309, respectively.

Set the Braking Resistance Overload Time at parameter F639 to establish how long the braking resistor is allowed to sustain the overload condition before a trip is incurred (the factory default setting is 5 seconds).
Light-duty and heavy-duty resistors vary from a few ohms to several hundred ohms. The appropriate resistance size will be typeform-specific and application-specific. Contact your Toshiba Sales Representative or the Toshiba Customer Support Center for more information on your specific DBR requirements.
Heavy-duty DBRs should be wired using the same gauge wire as the motor leads. Light-duty DBRs may use one wire size smaller (AWG or kcmil) than the motor leads.

Because the heat generated by the DBR will affect the cooling capacity of the heat sink, the resistor pack should be mounted above or to the side of the ASD - NEVER below the ASD. Maintain a minimum of six inches between the resistor pack and the ASD.

The total wire length from the ASD to the DBR should not exceed 10 feet.
The wiring from the ASD to the DBR should be twisted approximately two twists per foot throughout the length of the wire.

If EMI/RFI noise is of concern, the DBR wiring should be 3-core screened cable. The screen should connect to the ASD enclosure and the resistor enclosure.

## CAUTION

Though the in-line DBR fuse and the thermal relay are designed into the system to prevent a catastrophic DBR over-current condition, they are both intended to be used as backup protection ONLY.

A proper typeform-specific and application-specific system setup that includes using the appropriate Dynamic Braking Resistor and Overload settings will be required.

Figure 37. DBR Configurations.
Braking Resistor circuit with a thermal fuse.

Figure 38. Shown below is a typical connection diagram using an MCCB with a Trip Coil (TC) in lieu of an input contactor. A control transformer is required for 400 -volt models only. The primary MC is opened in the event of a DBR over-current detection. With no power supplied to the G9 ASD the failure will not be displayed on the EOI; see the Trip History for failure information once restarted.

## Short Circuit Protection Recommendations

Table 22. 230/240 and 400/480-Volt ASD Recommended Circuit Breaker Selection.

| Model Number VT130G9U | ASD HP | Continuous Output Current (Amps) | Circuit Breaker Part Number |

## Optional Devices

The ASD may be equipped with several options which are used to expand the functionality. Table 23 lists the available options and their functions.

Table 23. G9 Optional Devices and Functions.

| Part Identifier | Device Name | Device Function |
| :---: | :---: | :---: |
| ASD-CAB-USB | G9/G7 USB Communication Cable | Used to connect the ASD to a PC via the PC USB port. |
| ASD-EOI-HH-G9 | Display Module Docking Station | Used to flash the 9-series display module. |
| ASD-MTG-KIT9 | 9-Series EOI Remote Mounting Kit | Hardware used to mount 9-series ASD EOI remotely. |
| ASD-TB1-SIM9 | ASD Input/Output Signal Simulator | Used to simulate the ASD I/O monitor and control signals. |
| DEV002Z | DeviceNet Module | Allows the ASD to communicate via DeviceNet with other DeviceNet-supported equipment including a host computer. |
| ETB003Z | Expansion I/O Board 1 | Expands the Input/Output functionality of the ASD. |
| ETB004Z | Expansion I/O Board 2 | Expands the Input/Output functionality of the ASD. |
| PDP002Z | ProfiBus DP Module | Allows the ASD to communicate via ProfiBus with other ProfiBus-supported equipment including a host computer. |
| USB001Z | USB-to-Serial Converter | Allows for the USB port of a computer to be used as a communications port for monitoring and controlling the ASD. |
| VEC007Z | PG Vector Feedback Board | Allows for the use of Vector Control using a sensor (for use with a 5 -volt encoder). |
| VEC004Z | PG Vector Feedback Board | Allows for the use of Vector Control using a sensor (for use with a $\mathbf{1 2}$-volt encoder). |
| VEC005Z | PG Vector Feedback Board | Allows for the use of Vector Control using a sensor (for use with a 15 -volt encoder). |
| VEC006Z | PG Vector Feedback Board | Allows for the use of Vector Control using a sensor (for use with a $\mathbf{2 4}$-volt encoder). |
